INDEKSI CEN IN CENE KMETIJSKIH PRIDELKOV PRI PRIDELOVALCIH, SLOVENIJA, SEPTEMBER 2004 PRODUCER PRICE INDICES AND PRICES OF AGRICULTURAL PRODUCTS, SLOVENIA, SEPTEMBER 2004

- ▶ Cene kmetijskih pridelkov pri pridelovalcih so bile v letošnjem septembru povprečno za 1,8 % nižje kot v septembru preteklega leta (cene rastlinskih pridelkov so bile za 14,0 % nižje, cene živali in živalskih proizvodov pa za 4,5 % višje).
 - ▶ Zvišale so se cene:
 - vina (za 9,1 %) in
 - živali za klanje (za 8,4 %).
 - ▶ Znižale so se cene:
 - krompirja (za 66,4 %),
 - zelenjadnic (za 32,9 %),
 - žit (za 13,9 %),
 - sadja (za 13,1 %),
 - industrijskih rastlin (za 12,6 %)
 - krmnih rastlin (za 7,3 %) in
 - živalskih proizvodov (za 1,2 %).
- ▶ In comparison with September 2003, in September 2004 the prices of agricultural products decreased by 1.8% (prices of crop output decreased by 14.0% and prices of animals and animal products increased by 4.5%).
 - ▶ Agricultural products whose prices increased were:
 - wine (by 9.1%) and
 - animals for slaughter (by 8.4%).
 - ▶ Agricultural products whose prices decreased were:
 - potato (by 66.4%),
 - vegetables (by 32.9%),
 - cereals (by 13.9%),
 - fruits (by 13.1%),
 - industrial plants (by 12.6%),
 - fodder plants (by 7.3%) and
 - animal products (by 1.2%).

1) Cene so v mesecih, ko se pridelki pojavljajo izražene v SIT na mersko enoto: liter (070000 Vino, 080000 Oljčno olje, 121100 Mleko, kravje), kos (122000 Jajca) oziroma kg (vsi ostali navedeni kmetijski pridelki).
V primerih, ko se odkup pridelkov ne pojavi in cena ni na voljo, vzamemo za izračun indeksa zadnjo evidentirano ceno.
Prices are expressed in SIT per unit: litre (070000 Wine, 080000 Olive oil and 121100 Cows milk), piece (122000 Eggs) or kilogram (all other products).
In the case of not purchased product and missing price we use repetition of the last recorded price.

METODOLOŠKA POJASNILA

Namen statističnega raziskovanja

Z indeksom cen kmetijskih pridelkov prikazujemo mesečna in letna gibanja cen v odkupu kmetijskih pridelkov. Indeksi kmetijskih cen se uporabljajo v zvezi z analizo dohodkov v kmetijstvu ter v okviru ekonomskih računov za kmetijstvo (ERK); cene pa za primerjavo ravni cen v posameznih državah.

Vir podatkov

Vir podatkov za izračun indeksov odkupnih cen so mesečna poročila o odkupu oziroma prodaji pridelkov od pridelovalcev (to so podjetja, zadruge in druge organizacije).

Zajetje

Izbrani so le tisti pridelki, ki predstavljajo pomemben delež v odkupu oziroma prodaji. V izboru reprezentativnih pridelkov so zajeti sezonski in nesezonski pridelki.

Definicije in druga pojasnila

Uteži nesezonskih pridelkov (žita, industrijske rastline, krmne rastline, krompir, vino, oljčno olje in drugi poljedelski pridelki, živali in živalski proizvodi) so enake za vse mesece v letu, uteži sezonskih pridelkov (sadje in zelenjadnice) pa so za vsak mesec različne.

METHODOLOGICAL EXPLANATIONS

Purpose of the statistical survey

Producer price indices of agricultural products show monthly changes of prices in purchase of agricultural products. Agricultural price indices are used above all in relation with agricultural income and in the framework of the Economic Accounts for Agriculture (EAA); and the prices for comparison of the price level between countries.

Data sources

The main data source are data from the survey of purchase or sale of agricultural products. Data are submitted monthly to the Statistical Office by enterprises, co-operatives and other organisations.

Coverage

Selected are only products which represent an important share in the purchase or sale. The list of representative products includes seasonal and nonseasonal products.

Definitions and other explanations

The weights for nonseasonal products (cereals, industrial plants, fodder plants, potatoes, wine, olive oil and other crop products, animals and animal products) are equal for each month of the year, while the weights for seasonal products (fruits, vegetables and ornamental plants) are different depending on the month.

Cene spremljamo v prvi fazi trženja, ker najbolje prikazujejo dejanske cene pri pridelovalcu.

V primerih, ko za določen mesec cena ni na voljo, za izračun indeksa vzamemo zadnjo evidentirano ceno.

Sadje in zelenjava so izrazito sezonski pridelki. Manjkajočih cen ni mogoče nadomestiti s ponovitvijo zadnjih evidentiranih cen, zato v takih primerih uporabljamo spremenljive mesečne uteži, ki so odvisne od obdobja trženja posameznih pridelkov.

V cenah niso upoštevani DDV in dodatki (subvencije in podpore), ki jih dobijo pridelovalci za določene pridelke. Prav tako niso upoštevani stroški organizacije v zvezi s prevzemom in prevozom pridelkov, uskladiščenjem, stroški vračljive embalaže in olajšave, ki jih organizacije odobrijo kupcem.

Indekse cen kmetijskih pridelkov pri pridelovalcih izračunavamo po Laspeyresovi formuli. V izračunu indeksov cen uporabljamo utežene cene, ki jih izračunamo iz mesečnih obdelav odkupa kmetijskih pridelkov, letne cene za posamezne pridelke pa dobimo iz uteženih mesečnih cen.

Doslej uporabljeno metodologijo izračuna indeksov cen, ki je v dokajšnji meri sledila priporočilom Eurostata, smo z letom 2004 uskladili z metodologijo Eurostata. Na osnovi baznega leta 2000 so narejeni tudi novi preračuni za leta 2000-2003. Na novo so izračunane uteži za kmetijske pridelke, in sicer smo za rastlinske pridelke upoštevali podatke odkupa in Popisa kmetijstva. Pri sadju in zelenjadnicah smo upoštevali intenzivno pridelavo. Pri živini smo poleg odkupa upoštevali tudi zakol v klavnicah. Pridelke smo ovrednotili in izračunali uteži glede na njihovo vrednost v celotni vrednosti. Sistem uteži se bo spreminjal vsakih pet let. S primerjavo mesečnih cen na cene baznega leta 2000 izračunamo mesečne indekse za vsak pridelek posebej in preko teh indekse skupin in skupni indeks.

Objavljanje rezultatov

Mesečno:

- Statistične informacije. Cene. Indeksi cen in cene kmetijskih pridelkov pri pridelovalcih

The prices are recorded at the first marketing stage to best indicate the actual producer prices received by farmers

In the case of missing price we use repetition of the last recorded price.

Fruits and vegetables are extremely seasonal products. The problem of the periodic absence of prices could not be solved by repeating the last recorded prices. Therefore, we use the method of variable monthly baskets, depending on the period of marketing of products.

Prices do not include VAT (subsidies and supports), which producers obtain for certain products. Manipulation costs related to the delivery of agricultural products, storage, costs of returnable packaging and other payment facilities granted to the buyer are not included

The compilation of the agricultural producer **price index** is based on Laspeyres formula. In calculation, we use weighted prices, compiled from monthly prices of purchase of agricultural products, while annual prices are compiled from weighted monthly prices.

The methodology of calculating producer price indices used until 2003 was in 2004 implemented by the methodology of Eurostat. On 2000 as the base year we calculated indices also for the 2000-2003 period. New weights of individual agricultural products were calculated, for agricultural products with respect to the total purchase and intensive production of fruits and vegetables; by livestock purchase and slaughter of animals in slaughterhouses. Weights for individual products are calculated with respect to the total value of purchase. Every five years the weights will be recalculated. Comparing monthly prices with the prices of the base year 2000 we calculate individual indices for each individual product. From individual indices, we calculate aggregate indices, i.e. indices of groups and the total index.
