Eigenspaces of Hamming graphs and unitary Cayley graphs

Torsten Sander

Abstract

In this work, the eigenspaces of unitary Cayley graphs and certain Hamming graphs are considered. It is shown that these graph classes are closely related and admit particularly simple eigenspace bases for all eigenvalues, namely bases containing vectors only with entries from the set $\{0, 1, -1\}$. A direct consequence is that the considered graph classes are integral.

Keywords: Eigenvalue, eigenspace, Hamming graph, Cayley graph.

Lastni prostori Hammingovih grafov in unitarnih Cayleyevih grafov

Povzetek

V članku obravnavamo lastne podprostore unitarnih Cayleyevih grafov in nekaterih Hammingovih grafov. Pokažemo, da so ti razredi grafov tesno povezani in imajo posebej enostavno bazo lastnega podprostora za vse lastne vrednosti, baza namreč vsebuje samo vektorje s komponentami iz množice $\{0, 1, -1\}$. Od tod neposredno sledi, da so obravnavani grafi integralni.

Ključne besede: Lastna vrednost, lastni prostor, Hammingov graf, Cayleyev graf.
