1. Imena golih števil do sto so:

eden	enajst	eden in dvajset	eden in trideset
dva	dvanajst	dva in dvajset	dva in trideset
tri	trinajst	tri in dvajset	i. t. d.
štiri	štirinajst	štiri in dvajset	štirideset
pet	petnajst	pet in dvajset	petdeset
šest	šestnajst	šest in dvajset	šestdesest
sedem	sedemnajst	sedem in dvajset	sedemdeset
osem	osemnajst	osem in dvajset	osemdeset
devet	devetnajst	devet in dvajset	devetdeset
deset	dvajset	trideset	sto

Namesto eden, dva se šteje tudi ena, dve. Ker pravimo enajst (t. j. eden na deset), dvanajst (t. j. dva na deset) in dvajset (t. j. dva deset), je dosledno šteti eden, dva — ne pa ena, dve, in potem tudi eden in dvajset, dva in dvajset, eden in trideset, dva in trideset....

Namesto eden in dvajset, eden in trideset, dva in dvajset, dva in trideset, štejejo po nekod (posebno stari ljudje, ki niso hodili v šolo) tudi dvajset in eden, trideset in eden, dvajset in dva, trideset in dva, (Glej tudi Lehrgebäude der Slow. Sprache vom Prof. Fr. Metelko, str. 94).

Škoda je, da se te oblike poizgubljajo, ker služijo pri pouku mnogo bolje nego prve.

2. Odštej 3 h od 7 h (7 h — 3 h)! čitamo: Odštej tri vinarje od sedmih vinarjev!

Odštej 3 od 7 (7 — 3)! pa čitamo: Odštej tri od sedem (ne od sedmih)!

15 h : 3 h čitamo: Trije vinarji v petnajstih vinarjih,

15 : 3 pa čitamo: Tri v petnajst (ne v petnajstih).

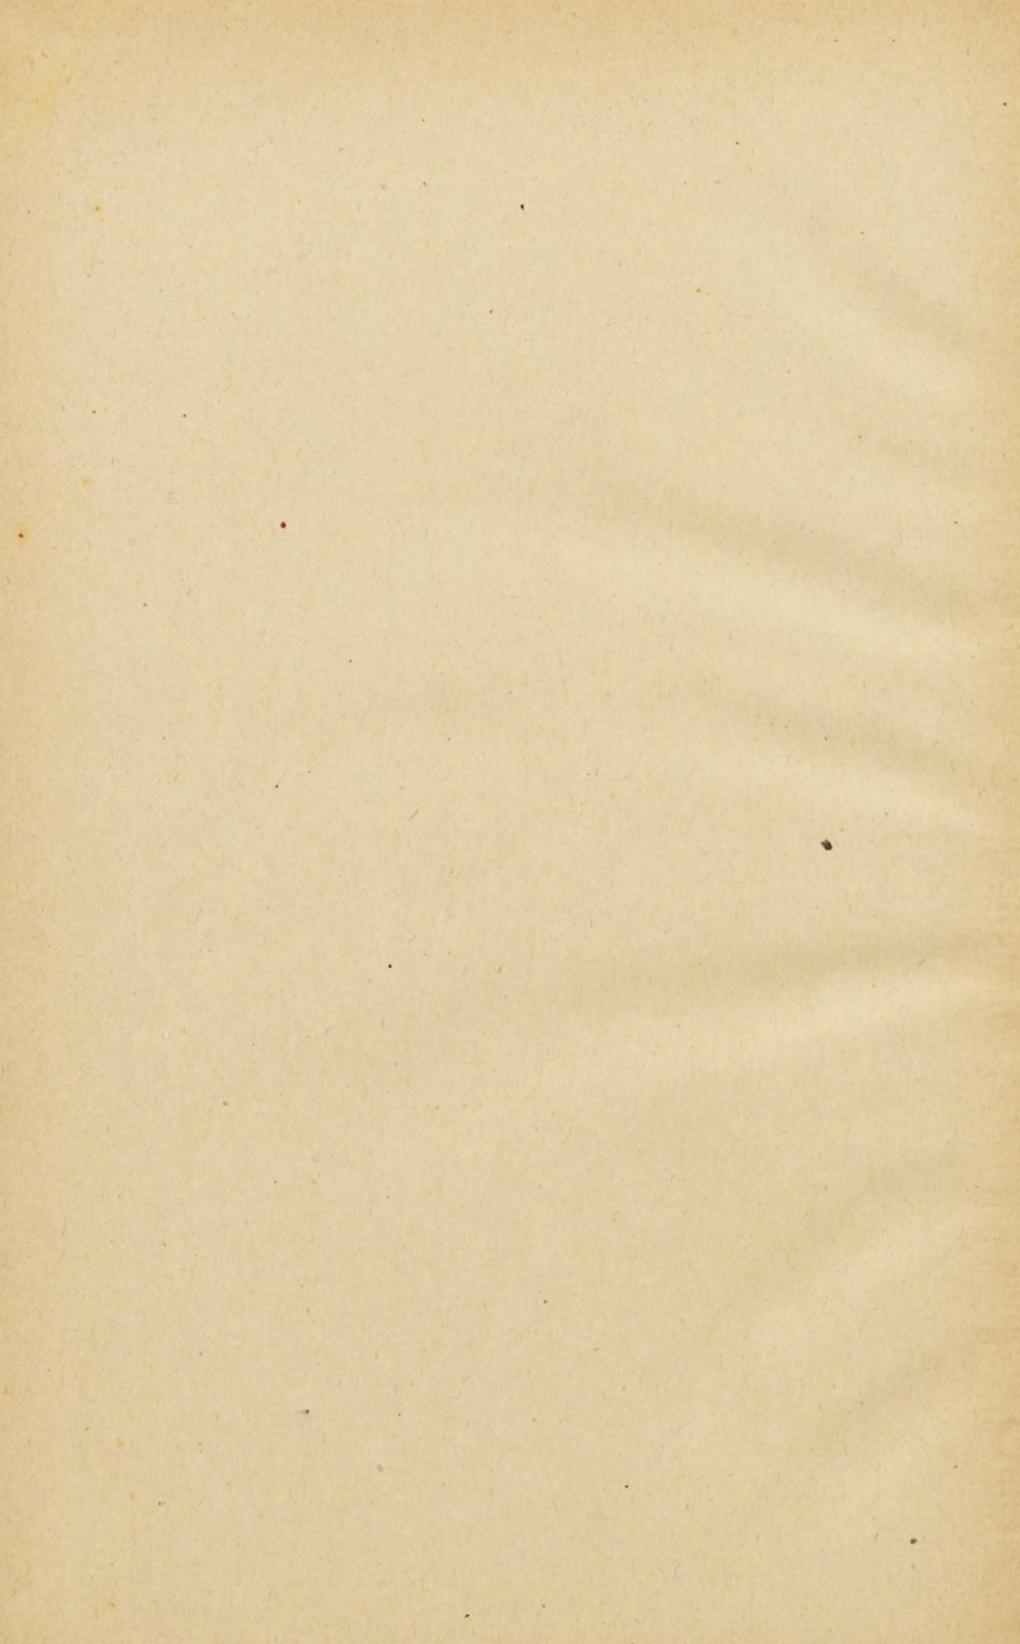

$\frac{1}{3}$ od 15 h čitamo: Ena tretjina od petnajstih vinarjev,

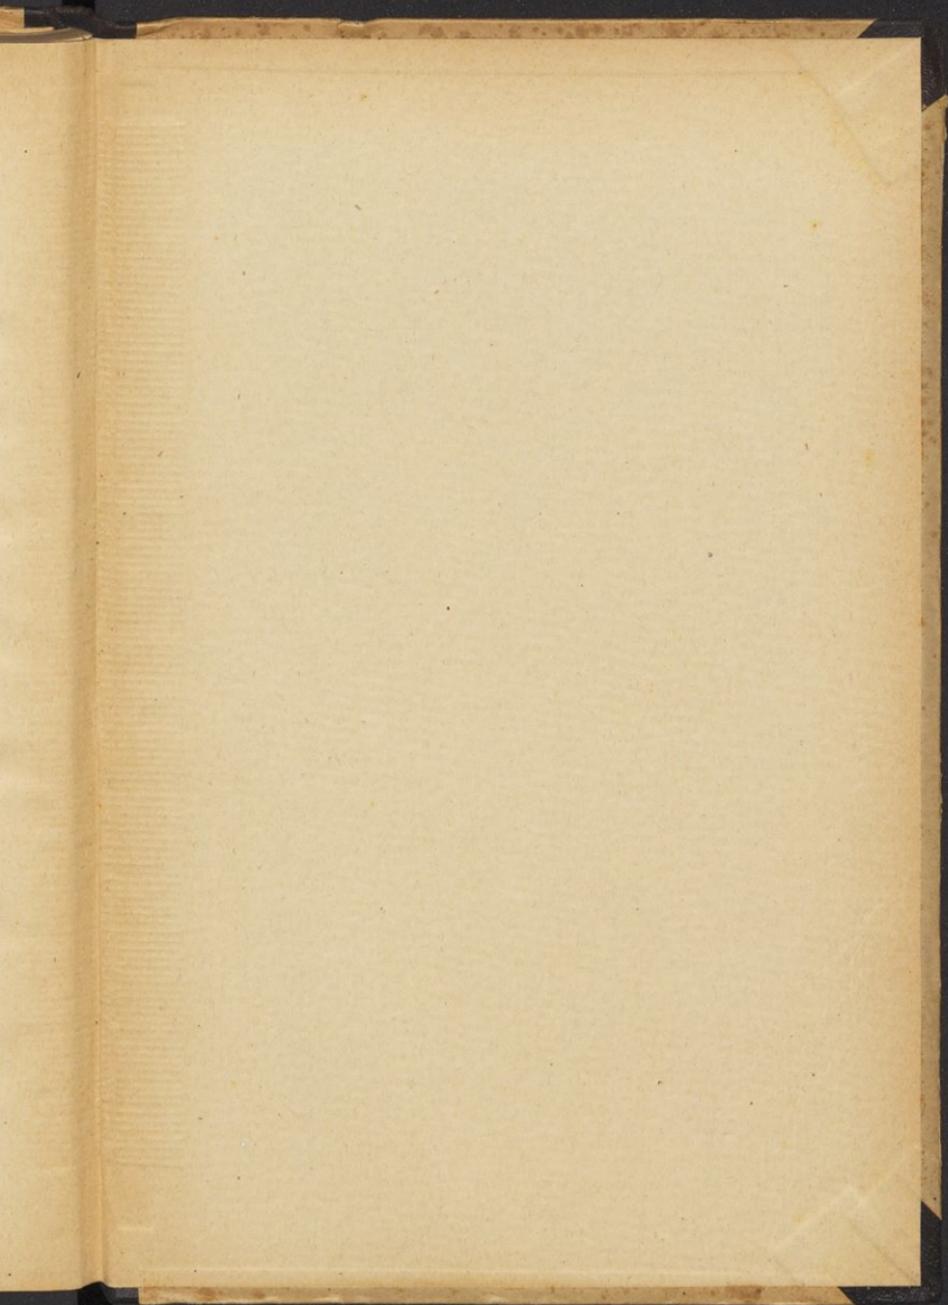

$\frac{1}{3}$ od 15 pa: Ena tretjina od petnajst (ne od petnajstih).

Imena golih števil se ne sklanjajo, sklanjajo pa se v zvezi s samostalniki. Primerjaj: „Ne zna do pet šteti“ — (ne do petih). Štej od dvajset do trideset! — (ne od dvajsetih do tridesetih).
