

ZAKLJUČNO POROČILO RAZISKOVALNEGA PROJEKTA

A. PODATKI O RAZISKOVALNEM PROJEKTU

1.Osnovni podatki o raziskovalnem projektu

Šifra projekta	N1-0011	
Naslov projekta	GReGAS - Geometrijske reprezentacije in simetrije grafov, preslikav in drugih diskretnih struktur ter aplikacij v znanosti	
Vodja projekta	1941	Tomaž Pisanski
Tip projekta	N	Projekti ESF in ERC
Obseg raziskovalnih ur	18137	
Cenovni razred	B	
Trajanje projekta	07.2011 - 06.2014	
Nosilna raziskovalna organizacija	1669	Univerza na Primorskem, Inštitut Andrej Marušič
Raziskovalne organizacije - soizvajalke	588 1554 2547 2975	Univerza v Ljubljani, Pedagoška fakulteta Univerza v Ljubljani, Fakulteta za matematiko in fiziko Univerza v Mariboru, Fakulteta za naravoslovje in matematiko ABELIUM d.o.o., raziskave in razvoj
Raziskovalno področje po šifrantu ARRS	1 1.01	NARAVOSLOVJE Matematika
Družbeno-ekonomski cilj	13.01	Naravoslovne vede - RiR financiran iz drugih virov (ne iz SUF)
Raziskovalno področje po šifrantu FOS	1 1.01	Naravoslovne vede Matematika

B. REZULTATI IN DOSEŽKI RAZISKOVALNEGA PROJEKTU

2.Povzetek raziskovalnega projekta¹

SLO

Geometrične in druge reprezentacije grafov in kombinatoričnih struktur, ki temeljijo na grafih imajo pomembne aplikacije v matematiki, računalništvu, socialnih omrežjih, kemiji, bioinformatiki, itd. Ob črpanju motivacije iz aplikacij je bil glavni cilj projekta, da skupaj s

partnerji v EU razvijemo koherentno teorijo reprezentacij grafov s poudarkom na simetričnih in skoraj simetričnih strukturah oz. produktih. Projekt sestavlja pet tem.

Tema 1: Reprezentacije in struktura grafov in drugih diskretnih struktur. Preučevali smo splošne vidike reprezentacij grafov z uporabo strukturnih lastnosti in informacije o simetriji in s tem prispevali k izgradnji teorije reprezentacij (enotski grafi, reprezentacije, krovi, itd.)

Tema 2: Skoraj simetrične strukture in produkti. Študirali smo izbrane teme povezane z grafovskimi produkti posebnih družin grafov (grafi Sierpinskega, Fibonaccijeve kocke) s poudarkom na izbranih grafovskih invariantah, še posebej v povezavi s Wienerjevim indeksem.

Tema 3: Reprezentacije simetričnih grafov. Z nadaljevanjem razvoja teorije točkovno-tranzitivnih grafov smo prispevali k boljšemu razumevanju, še posebej v povezavi z določenimi strukturnimi lastnostmi grup avtomorfizmov grafov v kontekstu grafovskih reprezentacij simetričnih kombinatoričnih struktur. Posebno pozornost smo posvetili opisu kubičnih in 4-valentnih grafov, na katerih delujejo grupe ločno tranzitivno, ter klasifikaciji posebnih struktur iz katerih izvirajo zanimive (delne) geometrije (asociacijske sheme, krepko regularni grafi, kletke).

Tema 4: Reprezentacije konfiguracij, zemljevidov in politopov. Raziskave so bile osredotočene na strukturne lastnosti, klasifikacijo in oštevilčenje konfiguracij, zemljevidov in politopov v povezavi z njihovimi kombinatoričnimi in geometričnimi reprezentacijami. Prav tako smo se osredotočali na razvoj usteznih algoritmov. Preučevali smo reprezentacije konfiguracij preko grafov in obratno, konstrukcije. Prav tako smo se osredotočili na klasifikacije novih razredov simetričnih konfiguracij z visoko stopnjo povezanosti.

Tema 5: Reprezentacije velikih omrežij in aplikacije v kemiji, bioinformatiki in socialnih omrežjih. Velika omrežja z večimi milioni vozlišč so običajno redka in pri njihovi obravnavi se soočamo z določenimi tehničkimi omejitvami (v celoti morajo biti shranjena v spominu). V projektu smo se osredotočili na omrežja citiranj, dvodelna omrežja in dinamična omrežja (analiza in vizualizacija). Identificirali in predstavili smo več možnosti aplikacij teorije grafov in zemljevidov v kemiji in sintetični biologiji.

Rezultati projekta so objavljeni v več kot 40 člankih v znanstvenih revijah z impact faktorjem.

Poročilo predstavlja le del projekta GReGAS v okviru sheme EUROCORES/EUROGIGA s strani Evropske znanstvene fundacije, ki smo ga izvajali v Sloveniji.

ANG

Geometric and other representations of graphs and graph based combinatorial structures have important applications in mathematics, computer science, social networks, chemistry, bioinformatics, etc. Motivated by applications, the main goal of the project was to, together with EU partners, develop a coherent theory of graph representations with emphasis on symmetric and near symmetric structures or products. The project consists of 5 themes.

Theme 1: Representations and structure of graphs and other discrete structures. General aspects of graph representations using graph structural properties and information on symmetries have been studied, thus making the contribution towards building coherent representation theory (unit distance graphs, representation, covers, etc.)

Theme 2: Near symmetric structures or products. Special topics related to graph products and special families of graphs were studied (Sierpinski graphs, Fibonacci cubes) together with particular graph invariants, especially Wiener index.

Theme 3: Representations of symmetric graphs. By further developing theory of vertex-transitive graphs we have contributed to better understanding, especially of certain structural properties of automorphism groups of graphs in the context of graph representations of highly symmetric combinatorial structures. Special attention was given to description of cubic and quartic graphs admitting arc-transitive group actions and classification of special structures from which interesting (partial) geometries arise (association schemes, strongly regular graphs, cages).

Theme 4: Representations of configurations, maps and polytopes. The research focused on structural properties, classification and enumeration of configurations, maps and polytopes relevant for their combinatorial and geometric representations, as well as on development of relevant algorithms. Relations between geometry and symmetries were studied in various geometries, both for finite and infinite structures. We have investigated representing configurations via graphs and vice versa, and studied construction and classification of new classes of symmetric highly incident configurations.

Theme 5: Representations of large networks and applications in chemistry, bioinformatics and social networks.

Large networks have several millions of vertices, are usually sparse and their use imposes certain technological limits (a need to store them completely in the computer memory). In the project, special attention was given to citation networks, two-mode networks and dynamic networks (analysis and visualization). Several applications of map and graph theory have been introduced to chemical graph theory and synthetic biology.

The results of the project were published in more than 40 publications in journals with impact factor.

The report presents only the part of the EUROCORES/EUROGIGA project GReGAS selected by European Science Foundation, which was carried out in Slovenia.

3.Poročilo o realizaciji predloženega programa dela na raziskovalnem projektu²

Projekt se je začel z julijem 2011 s t.i. "kick-off" sestankom v Parizu, kjer so se zbrali vodje vseh 4 projektov v programu EUROGIGA/EUROCORES in je bil določen program za aktivnosti mreženja. Slovenski del projekta je tako v okviru projekta organiziral naslednje mrežne aktivnosti:

- simpozij CSASC 2011 v Kremsu, Avstrija, 2011
- SODO 2012 v Novi Zelandiji,
- konferenco Computers in Scientific Discovery 6, 2013, Koper, Slovenija,
- simpozij CSASC 2013 v Kopru, Slovenija,
- GEMS 2013 na Slovaškem,

Poleg tega pa se iz teh sredstev organizira tudi ravno tekoča konferenca EuroCD 2015 v Ljubljani, Slovenia (marec 2015).

Projekt je naslavljal pet tem, ki so navedene v nadaljevanju z opisom rezultatov.

1. Reprezentacije in strukture grafov in drugih diskretnih struktur

Preučevali smo grafe z enotsko razdaljo, t.j. take, ki jih lahko predstavimo v ravnini tako, da imajo vse povezave enako dolžino [COBISS.SI-ID 16312665]. Za pomembno družino grafov, to so posplošeni Petersenovi grafi, smo pokazali, da so grafi z enotsko razdaljo [COBISS.SI-ID 16217945]. Problema smo se lotili tako, da smo posplošene Petersenove grafe gledali v širšem kontekstu I-grafov in pokazali, da je vsak posplošeni Petersenov graf (razen nekaterih sporadičnih primerov, ki smo jih obravnavali posebej) izomorfen I-grafu, ki ima predstavitev z enotsko razdaljo v ravnini z rotacijsko simetrijo. Pri tem smo potrebovali tudi karakterizacijo za izomorfnost I-grafov z različnimi parametri [COBISS.SI-ID 16069977]. Na grafih z enotsko razdaljo smo preučevali tudi invariante, kot so dilacijski koeficient, ravninska širina ter resolucijski koeficient in odnose med njimi [COBISS.SI-ID 1024499540]. Vpeljali smo naravno posplošitev Petersenovih grafov, t.i. GI-grafe in popolnoma karakterizirali grupe avtomorfizmov za te grafe. To nam je omogočilo študij ostalih simetrijskih lastnosti, kot je točkovna tranzitivnost in kateri GI-grafi so Cayleyevi [COBISS.SI-ID 1024411732].

Definirali smo tudi posebne vrste krov nad poljubnim enostavnim grafom G in ga imenovali $\text{TheCov}(G)$, ki je popolnoma določen z grafom. Študirali smo simetrijske in grafovske lastnosti takih krovov [COBISS.SI-ID 16868185].

Vzpostavili smo tudi Enciklopedijo grafov (<http://atlas.gregas.eu>), ki jo prav tako dalje podporamo v okviru infrastrukturjnega programa na podjetju Abelium. Katalog 4-valentnih simetričnih grafov smo uspeli zapisati v zelo skrčeni obliki s pomočjo krovov.

2. Skoraj simetrične strukture in produkti grafov

Na področju splošne teorije izometričnih vložitev smo eksplicitno določili kanonično izometrično vložitev za grafe Sierpinskega [COBISS.SI-ID 16582233]. Poleg tega smo za to dvoparametrično družino grafov določili oz. podali meje za Hammingovo dimenzijo [COBISS.SI-ID 16416857]. Nadalje smo karakterizirali grafe Sierpinskega, ki so vpeti podgrafi grafov Hanojskega stolpa [COBISS.SI-ID 16590425].

Preučevane so bile metrične invariante grafov, kar vključuje tudi polinomske funkcije, Wienerjev indeks na uteženih grafih in metrično dimenzijo grafa. Pokazali smo, da se lahko Wienerjev indeks uteženih grafov izrazi kot vsota Wienerjevih indeksov uteženih kvocientnih grafov glede na poljubno kombinacijo Djokovic-Winkler razredov. Dodatno smo pokazali da se lahko uporabi metoda rezov za izračun poljubnih momentov razdalj za vse grafe, ki so izometrično vložljivi v kartezični produkt trikotnikov [COBISS.SI-ID 16590169, 16861017, 16768089, 16861017, 16893273].

Študirali smo tudi konveksnost, še posebej pa lastnosti konveksnih ciklov. Podali smo zgornjo mejo za število konveksnih ciklov v danem grafu in pogazali da velja enakost če in samo če je grafičnih cikel ali Moorov graf (en članek poslan v objavo).

Preučevali so izometrične podgrafe hiperkock (ki so najenostavnnejši večkratni kartezični produkti), predvsem Fibonaccijeve kocke in Lucasove kocke. Osredotočili smo se na različne metrike in povezane probleme na produktnih grafih, med katerimi so (i) k-potno vektorsko pokritje, ki je grafovska invarianta povezana z varnostnimi vidiki v brezzičnih omrežjih, (ii) barvanja v krepkih produktih, leksikografskih produktih in direktnih produktih, (iii) varnostno število na mrežnih grafih (mreže, cilinder, torus), (iv) partijska dimenzija krepkih produktov in Kartezičnih produktov, (v) $L(2,1)$ -označevanja produktov in $L(3,2,1)$ -označevanja trikotniških in toroidalnih mrež, (vi) kromatično število in moč največje neodvisne množice kvadrata kartezičnih produktov ciklov. Na to temo je bilo objavljenih več del: [COBISS.SI-ID 16624473, 16590425, 16590169, 19464968, 17220697, 17087065, 16970585].

Razen tega smo napisali pregledni članek (ki med vsebuje tudi nove krajše dokaze znanih izrekov) o Fibonaccijevih kockah in sorodnih razredih grafov in s tem dodatno osvetlili Fibonaccijev dimenzijo grafa [COBISS.SI-ID 16603737]

3. Reprezentacije simetričnih grafov

Na področju simetrij smo se ukvarjali z raziskavami snarkov in hamiltonskosti preko metode vlaganja grafov na ploskve. Raziskovalci na tem področju so dosegli izjemen uspeh s prestižno objavo [COBISS.SI-ID 1024390740].

Ukvarjali smo se s študijem krovnih grafov ter tudi z povezanostjo razdaljno uravnoteženih grafov [COBISS.SI-ID 1024329300]. Izvedli smo klasifikacijo visoko simetričnih grafov, med njimi kubičnih simetričnih tricirkulantov in tetracirkulantov, bicikličnih grafov z ekstremnim PI-indeksom. Ukvarjali smo se tudi z študijem grup avtomorfizmov racionalnih cirkulantnih grafov.

Na področju študija simetrij v grafih smo dalje študirali točkovno tranzitivne grafe. Točkovno tranzitivni grafi v splošnem kot tudi povezave med njimi in geometrijskimi objekti predstavljajo pomembno temo aktivnih raziskav že dlje časa. Večina interesa izvira iz dejstva da so primerni za modeliranje znanstvenih fenomenov povezanih s simetrijo. Naš cilj je bil raziskovati odprte probleme povezane s stukturnimi lastnostmi točkovno tranzitivnih grafov, še posebej tistih, ki

zadoščajo dodatnim grupno-teoretičnim lastnostim, kot so npr. ločna-tranzitivnost, pol-ločna-tranzitivnost in semisimetrična delovanja grup, s poudarkom na navezavo na odprte probleme na konfiguracijah in simetričnih zemljevidih. Dodatno smo uporabljali geometrijska orodja za reševanje problemov v teoriji točkovno tranzitivnih grafov, kot je zneni odprt problem Hamiltonovih poti/ciklov v točkovno tranzitivnih grafih. Na temo simetričnih grafov je bilo objavljenih več del COBISS.SI-ID: 1024446036, 1024510804, 1024533588, 1536117444, 1536086724, 1024490836, 1024470868, 1024486996, 1024490324, 1536085700, 1024511060, 1024532564, 1024516948, 1536241092, 1536423620, 1536423620, 1536920004, 1536280516, 1537120964, 1536172996, 1536382660].

4. Reprezentacije konfiguracije, zemljevidov in politopov

Ukvarjali smo se s preučevanjem simetrijskih tipov zemljevidov na ploskah ter vplivom operacij (duala) na njih [COBISS.SI-ID 16773465]. Objavili smo članek s klasifikacijo toroidalnih politopov, ki jih dobimo z razrezom prostorskega tlakovanja s kockami {4,3,4} [COBISS.SI-ID 16478297].

Vodja projekta prof. dr. Pisanski je v soavtorstvu z B. Servatius objavil tudi monografijo Configurations from a Graphical Viewpoint (Birkhäuser Advanced Texts Basler Lehrbücher) [COBISS.SI-ID 16418137].

Na področju učinkovitega generiranja grafov smo sodelovali z Univerzo v Gentu, Belgija [COBISS.SI-ID 16653401]. Objavljen je bil članek v povezavi s Haarovimi grafi in konfiguracijami [COBISS.SI-ID 1536194756]. Preučevali smo rotacijsko simetrične poligone in konfiguracije [COBISS.SI-ID 1024339284]

Na področju študija geometrijskih reprezentacij konfiguracij smo študirali g-laterale in geometrične in kombinatorične konfiguracije. Pokazali smo, da se v posebni družini konfiguracij lahko pojavi ali pa ne katera koli od osmih možnih kombinacij obstaja ali neobstoja g-lateral za $3 \leq g \leq 5$. Poleg tega smo prikazali geometrične realizacije za izbrane manjše primere 3-, 4- in 5-lateral prostih (v3) konfiguracij (pospoljeni šestkotniki). Študirali smo tudi (v4) konfiguracije in identificirali najmanjšo znano geometrično 3-lateral prosto (v4) konfiguracijo. [COBISS.SI-ID 16089433]

5. Reprezentacije velikih omrežij in aplikacije v kemiji, bioinformatiki ter socialnih omrežjih.

Razvili smo nove funkcionalnosti pri orodju net.Plexor, ki je alternativa orodju Pajek in se ga bo uporabljalo za analizo in vizualizacijo omrežij in ga ponudili v uporabo tudi v okviru infrastrukturnega programa na podjetju Abelium. V okviru izdelave programa se je izobraževalo več mladih raziskovalcev, ki so medtem že tudi doktorirali. Začel se je tudi razvoj na prototipnih programskeh knjižnicah v Pythonu za časovna omrežja (TQ, Ianus).

Objavljen je bil članek, ki omogoča vizualizacijo s pomočjo (X,Y)-gručenja [COBISS.SI-ID 16097881]. Izvajali smo raziskave na področju implementacije gručenja po povezavah in ustrezne vizualizacije, pri čemer je sodeloval še en študent (Jernej Bodlaj).

V. Batagelj je skupaj z mlado raziskovalko v gospodarstvu Moniko Cerinšek objavil članek v reviji Scientometrics. Temeljila je na raziskavah na podatkovni bazi ZENTRALL BLATT for mathematics in sodelovalnih omrežjih avtorjev. Uvedene so bile ustrezne uteži v izračun omrežij sodelovanj, ki so omogočile realnejšo sliko prispevka (produktivnosti) posameznega avtorja in ustreznejše določitve skupin sodelujočih avtorjev. Poleg tega smo lahko vpeljali ustrezno mero za sodelovalnost posameznega avtorja [COBISS.SI-ID 17149273, 16739929].

Monografija W. de Nooy, A. Mrvar, V. Batagelj, Exploratory Social Network Analysis with Pajek: Revised and Expanded 2nd Edition., Cambridge University Press, Cambridge, GB, 2012 [COBISS.SI-ID 30443869], je doživelja ponovno razširjeno izdajo, poleg tega pa je bila izdana tudi v kitajskem jeziku [COBISS.SI-ID 31870813].

Začeli in intenzivno delali smo na raziskavah na področju dinamičnih velikih omrežij. Rezultat dela je objavljena monografija [COBISS.SI-ID 31563993]. Prispevali smo več prispevkov v obsežno Encyclopedia of Social Networks Analysis and Mining [COBISS.SI-ID 17138265, 17138521, 17138777, 17145433].

Sodelovali smo pri analizi podatkov o telefonskem prometu v Slonokoščeni obali d4d (data for development). Rezultate smo predstavili na srečanju skupin na MIT, ZDA. Ukvajali smo se z razvojem novih metod za analizo velikih acikličnih omrežij (npr. omrežja sklicevanj - citation networks). Razvili smo nov, zelo hiter postopek za določanje pomembnosti vozlišč - verjetnostni (pre)tok (probabilistic flow). Za uteži povezav SPC smo pokazali, da je utež na posamezni povezavi manjša ali enaka od uteži na povezavah na poti, ki veže njeni krajišči. Torej lahko tranzitivnostne povezave odstranimo in dobimo preglednejšo sliko omrežja - tranzitivnostno ogrodje (skelet). Razvili smo učinkovit postopek za določanje slednjega v velikih omrežjih.

Na področju kemijske teorije grafov smo preučevali uporabo prapornih grafov na benzenoidih [COBISS.SI-ID 16058713], [COBISS.SI-ID 16971097]. Objavili smo tudi članek na temo zanimive povezave Jahn-Tellerjevega izreka s teorijo grafov [COBISS.SI-ID 16090457], v prestižni reviji Proc. - Royal Soc., Math. phys. eng. sci. V povezavi z Jahn-Tellerjevimi problemi pa je prišlo do objave še enega članka [COBISS.SI-ID 16411737].

Ukvajali smo se z grafičnimi predstavitvami DNK v ravnini s pomočjo zemljevidov ter s kvantitativno in računsko analizo teh. Štiri-črkovna zaporedja smo predstavili s pomočjo spiralne reprezentacije nad trikotniško in štirikotniško mrežo v ravnini v obliki 4-obarvanega zemljevida. Preučevali smo razne matrične invariante. [COBISS.SI-ID 16842585]

Študirali smo oblike reprezentacij spletnih strani in portalov s pomočjo grafov in predlagali različne organizacijske pristope. [COBISS.SI-ID 51728482].

4.Ocena stopnje realizacije programa dela na raziskovalnem projektu in zastavljenih raziskovalnih ciljev³

Projekt se je izvedel v skladu z zastavljenimi cilji.

Mednarodno sodelovanje je bilo uspešno. Angažirani smo tudi v mrežne aktivnosti v sodelovanju z ESF. V okviru tega poročila opisujemo samo del projekta, ki se je izvajal v Sloveniji in je bil financiran s strani ARRS. Projekt ima tudi mednarodno dimenzijo, ki pa je prikazana v poročilih za Evropsko znanstveno fundacijo. Oddani sta bili tudi vmesno in končno poročilo Evropski znanstveni fundaciji. Vmesno poročilo je bilo pozitivno ocenjeno končno pa je še v postopku ocenjevanja. Oddani poročili sta pripeti temu poročilu.

5.Utemeljitev morebitnih sprememb programa raziskovalnega projekta oziroma sprememb, povečanja ali zmanjšanja sestave projektne skupine⁴

V projektu ni večjih sprememb, kljub temu, da je s strani ARRS v letu 2012 in 2013 prišlo do znižanja sredstev.

6.Najpomembnejši znanstveni rezultati projektne skupine⁵

Znanstveni dosežek			
1.	COBISS ID	16739929	Vir: COBISS.SI
	Naslov	<i>SLO</i>	O bibliografskih omrežjih
		<i>ANG</i>	On bibliographic networks

			V članku pokažemo, da lahko bibliografske podatke pretvorimo v nabor usklajenih omrežij. Z množenjem omrežij lahko iz njih pridobimo več zanimivih izpeljanih omrežij. Pri njihovi definiciji je potrebno upoštevati ustrezno normalizacijo. Predstavljeni pristop je uporaben tudi za podobne nabore usklajenih omrežij z drugih področij. Omrežja, pridobljena iz bibliografskih podatkovij, so lahko (zelo) velika (na sto tisoč vozlišč). K sreči so redka in jih za to še vedno lahko obdelamo razmeroma hitro. V članku damo odgovor na vprašanje: kdaj je zmnožek dveh redkih omrežij tudi sam redko omrežje. Predlagani pristopi so prikazani z analizo nabora omrežij na temo "social networks", pridobljenih iz Web of Science. Dela z velikim številom avtorjev dodajo običajnemu omrežju sodelovanj velike polne podgrafe in tako zameglijijo sliko o sodelovanjih. Pokažemo, da lahko z ustrezno normalizacijo njihov učinek pridušimo. Med drugim vpeljemo mero sodelovalnosti avtorjev glede na dano bibliografijo in pokažemo, kako lahko izračunamo omrežje sklicevanj med avtorji in razkrijemo skupine glede na sklicevanje.
			In the paper we show that the bibliographic data can be transformed into a collection of compatible networks. Using network multiplication different interesting derived networks can be obtained. In defining them an appropriate normalization should be considered. The proposed approach can be applied also to other collections of compatible networks. The networks obtained from the bibliographic data bases can be large (hundreds of thousands of vertices). Fortunately they are sparse and can be still processed relatively fast. We answer the question when the multiplication of sparse networks preserves sparseness. The proposed approaches are illustrated with analyses of collection of networks on the topic "social network" obtained from the Web of Science. The works with large number of co-authors add large complete subgraphs to standard collaboration network thus blurring the collaboration structure. We show that using an appropriate normalization their effect can be neutralized. Among other, we propose a measure of collaborativity of authors with respect to a given bibliography and show how to compute the network of citations between authors and identify citation communities.

2.	COBISS ID		16090457 Vir: COBISS.SI
	Naslov	SLO	Teorija grafov in Jahn-Tellerjev izrek
		ANG	Graph theory and the Jahn-Teller theorem
	Opis	SLO	Jahn-Tellerjev izrek napoveduje spontano razbijanje simetrije in dvig degeneriranih elektronskih stanj nelinearnih molekularnih sistemov. V takih primerih se to zgodi zaradi geometrijskega popačenja. Molekularni problemi so pogosto modelirani s spektralno teorijo za obtežene grafe. Pričujoči prispevek obrne proces v nasprotno smer in na novo formulira Jahn-Tellerjev izrek za splošne utežene grafe. Če razumemo lastne vektorje kot orbitale, lastne vrednosti pa kot energijske nivoje, ki naj bi jih zasedli elektroni, tedaj je mogoče degeneracijo stanj razrešiti z ne popolnoma simetrično porazdelitvijo uteži na povezavah in, če je potrebno tudi na vozliščih grafa. V tej zvezi je postavljena tudi zanimiva domneva. Posebej sta obravnavana dva primera (graf oktaedra in graf fenalenila) saj se pri njiju degeniranost pojavlja zaradi različnih razlogov.
		ANG	The Jahn-Teller (JT) theorem predicts spontaneous symmetry breaking and lifting of degeneracy in degenerate electronic states of (nonlinear) molecular and solid-state systems. In these cases, degeneracy is lifted by

		<p><i>geometric distortion. Molecular problems are often modelled using spectral theory for weighted graphs, and the present paper turns this process around and reformulates the JT theorem for general vertex- and edge-weighted graphs themselves. If the eigenvectors and eigenvalues of a general graph are considered as orbitals and energy levels (respectively) to be occupied by electrons, then degeneracy of states can be resolved by a non-totally symmetric re-weighting of edges and, where necessary, vertices. This leads to the conjecture that whenever the spectrum of a graph contains a set of bonding or anti-bonding degenerate eigenvalues, the roots of the Hamiltonian matrix over this set will show a linear dependence on edge distortions, which has the effect of lifting the degeneracy. When the degenerate level is non-bonding, distortions of vertex weights have to be included to obtain a full resolution of the eigenspace of the degeneracy. Explicit treatments are given for examples of the octahedral graph, where the degeneracy to be lifted is forced by symmetry, and the phenalenyl graph, where the degeneracy is accidental in terms of the automorphism group.</i></p>

SLO	1024390740					
ANG	Hamilton cycles in (2, odd, 3)-Cayley graphs					
	Opis	<p>Leta 1969 je Lovász postavil vprašanje, ali ima vsak končen, povezan točkovno-tranzitiven graf Hamiltonovo pot. Kljub enostavni formulaciji, do sedaj ni bil dosežen kak večji preboj in sedaj je splošno sprejeto, da gre za težek problem. Enako velja za poseben podrazred Cayleyevih grafov, kjer je postavljena domneva o obstoju Hamiltonovih ciklov. Leta 2007 sta Glover in Marušič dokazala, da ima Cayleyev kubični graf za končno \$(2, i, 3)\$-generirano grupo \$G = \langle a, x a^2 = x^s = (ax)^3 = 1, \dots \rangle\$ Hamiltonsko pot, če je \$ G \$ kongruentna 0 po modulu 4, in ima Hamiltonski cikel, če je \$ G \$ kongruentna 2 po modulu 4. Konstruiran je bil Hamiltonov cikel na osnovi kombinacije teorije Cayleyevih zemljevidov s klasičnimi rezultati o ciklični stabilnosti v kubičnih grafih, in sicer kot v točko stisljiv rob drevesa lic pripadajočega Cayleyevega zemljevida. Z posplošitvijo teh metod so Glover, Kutnar in Marušič v letu 2009 razrešili še primer, ko je poleg \$ G \$ še \$s\$ kongruenten 0 po modulu 4. V tem članku je z dodatno razširitvijo pristopa z "drevesom lic" dokazano, da ostaja Hamiltonov cikel tudi ko je \$ G \$ kongruentna 0 po modulu 4 in je \$s\$ lih. S tem ostane kot edini odprt primer še, ko je \$ G \$ kongruentna 0 po modulu 4 in je \$s\$ kongruentna 2 po modulu 4. V tem zadnjem primeru pristop preko "drevesa lic" ni mogoče uporabiti in tako bo za dokončanje dokaza o obstoju Hamiltonovih ciklov v kubičnih Cayleyevih grafih, ki izhajajo iz končnih \$(2, i, 3)\$-generiranih grup, potrebno uporabiti popolnoma nove in drugačne metode.</p>				
		In 1969, Lovász asked if every finite, connected vertex-transitive graph has a Hamilton path. In spite of its easy formulation, no major breakthrough has been achieved thus far, and the problem is now commonly accepted to be very hard. The same holds for the special subclass of Cayley graphs where the existence of Hamilton cycles has been conjectured. In 2007, Glover and Marušič proved that a cubic Cayley graph on a finite \$(2, s, 3)\$-generated group \$G = \langle a, x a^2 = x^s = (ax)^3 = 1, \dots \rangle\$				

			\rangle has a Hamilton path when $ G $ is congruent to 0 modulo 4, and has a Hamilton cycle when $ G $ is congruent to 2 modulo 4. The Hamilton cycle was constructed, combining the theory of Cayley maps with classical results on cyclic stability in cubic graphs, as the contractible boundary of a tree of faces in the corresponding Cayley map. With a generalization of these methods, Glover, Kutnar and Marušič in 2009 resolved the case when, apart from $ G $, also s is congruent to 0 modulo 4. In this article, with a further extension of the above "tree of faces" approach, a Hamilton cycle is shown to exist whenever $ G $ is congruent to 0 modulo 4 and s is odd. This leaves $ G $ congruent to 0 modulo 4 with s congruent to 2 modulo 4 as the only remaining open case. In this last case, however, the "tree of faces" approach cannot be applied, and so entirely different techniques will have to be introduced if one is to complete the proof of the existence of Hamilton cycles in cubic Cayley graphs arising from finite $(2, s, 3)$ -generated groups.

	Naslov	SLO	O razdaljah v grafih Sierpinskega: skoraj-ekstremna vozlišča in metrična dimenzija.
		ANG	On distances in Sierpiński graphs: almost-extreme vertices and metric dimension
	Opis	SLO	Grafi Sierpińskega S_p^n tvorijo intenzivno raziskovano družino grafov fraktalne narave. Uporabni so v topologiji, matematiki Hanojskega stolpa, računalništvu, ter drugod. V članku vpeljemo skoraj-ekstremna vozlišča grafa S_p^n kot vozlišča, ki so bodisi sosedna z nekim ekstremnim vozliščem, ali pa so incidenčna povezavi med dvema podgrafoma izomorfnima S_p^{n-1} . Podane so eksplicitne formule za razdalje v S_p^n med poljubnim vozliščem in skoraj-ekstremnim vozliščem. Formule so uporabljeni za izračun celotne razdalje skoraj-ekstremnih vozlišč in za določitev metrične dimenzijs grafov Sierpińskega.
		ANG	Sierpiński graphs S_p^n form an extensively studied family of graphs of fractal nature applicable in topology, mathematics of the Tower of Hanoi, computer science, and elsewhere. An almost-extreme vertex of S_p^n is introduced as a vertex that is either adjacent to an extreme vertex of S_p^n or is incident to an edge between two subgraphs of S_p^n isomorphic to S_p^{n-1} . Explicit formulas are given for the distance in S_p^n between an arbitrary vertex and an almost-extreme vertex. The formulas are applied to compute the total distance of almost-extreme vertices and to obtain the metric dimension of Sierpiński graphs.

	Naslov	SLO	Pol-ločno-tranzitivni grafi z majhnim številom alter-mrež
		ANG	Half-arc-transitive graphs with small number of alternets
			Grafu X rečemo da je G-pol-ločno tranzitiven, če $G \leqslant \text{Aut}(X)$ deluje

Opis	<i>SLO</i>	tranzitivno na množici vozlišč grafa X in na množici povezav grafa X, ampak ne deluje tranzitivno na množici lokov X. Take grafe lahko preučujemo preko t.i. alter-mrež (ang. alternet), to so ekvivalentni razredi po relaciji dosegljivosti, ki je bila prvič predstavljena s strani avtorjev Cameron, Praeger in Wormald (1993). Če množici vozlišč dveh sosednjih alternetov bodisi sovpadata ali se sekata v polovici vozlišč pravimo, da je graf tesno spet. V članku preučujemo grafe z pol-ločno-tranzitivnim delovanjem grupe z največ pet alter-mrež. Če je število alter-mrež največ tri, pokažemo da je graf nujno testno spet. A obstajajo grafi z štirimi in petimi alter-mrežami, ki niso tesno speti. Vse te posebne grafe lahko razčlenimo ki jih lahko razčlenimo na particijo, ki nam da grafa R6(5,4)R6(5,4) ("Rose window" graf) ter poseben graf na 20 vozliščih v primeru petih alter-mrež.
	<i>ANG</i>	A graph X is said to be G-half-arc-transitive if $G \leqslant \text{Aut}(X)$ acts transitively on the set of vertices of X and on the set of edges of X but does not act transitively on the set of arcs of X. Such graphs can be studied via corresponding alternets, that is, equivalence classes of the so-called reachability relation, first introduced by Cameron, Praeger and Wormald (1993). If the vertex sets of two adjacent alternets either coincide or have half of their vertices in common the graph is said to be tightly attached. In this paper graphs admitting a half-arc-transitive group action with at most five alternets are considered. In particular, it is shown that if the number of alternets is at most three, then the graph is necessarily tightly attached, but there exist graphs with four and graphs with five alternets which are not tightly attached. The exceptional graphs all admit a partition giving the rose window graph $R6(5,4)R6(5,4)$ on 12 vertices as a quotient graph in case of four alternets, and a particular graph on 20 vertices in the case of five alternets.

Naslov	SLO	Konfiguracije iz vidika teorije grafov	
	ANG	Configurations from a graphical viewpoint	
Opis	SLO	Konfiguracije, ki jih lahko preučujemo iz vidika teorije grafov preko Levijevih grafov, ležijo v preseku teorije grafov, grup, ploskev in geometrije, ki predstavljajo zelo aktivna področja matematičnih raziskav. V knjigi oblikovani kot zaključena celota je algebraična teorija grafov uporabljena za predstavitev grup, topološka teorija grafov pa nam olajša razumevanje incidenčnih geometrij. Po pregledu konfiguracij v 1. poglavju predstavimo v 2. poglavju teorijo grafov, v 3. poglavju pa podamo geometrično orientiran uvod v teorijo grup. V 4. poglavju predstavimo kombinatorično obravnavo zemljevidov in ploskev. V 5. poglavju predstavimo koncept incidenčne strukture preko po točkah obarvanih grafov. Tu tudi podamo kombinatorične vidike klasičnih konfiguracij. V zadnjem poglavju za klasične konfiguracije podamo nekaj zanimivih geometričnih lastnosti, zgodovinskih opomb, referenc in aplikacij. S preko 200 ilustracijami, nalogami in obsežno bibliografijo na koncih poglavij ter množico podanih odprtih problemov predstavlja knjiga dobro osnovo za podiplomski tečaj iz teorije grafov, napreden dodiplomski seminar kot tudi celovito referenco za matematike in raziskovalce.	
		On the back cover page: Configurations can be studied from a graph-theoretical viewpoint via the so-called Levi graphs and lie at the heart of	

			graphs, groups, surfaces, and geometries, all of which are very active areas of mathematical exploration. In this self-contained textbook, algebraic graph theory is used to introduce groups; topological graph theory is used to explore surfaces; and geometric graph theory is implemented to analyze incidence geometries. After a preview of configurations in Chapter 1, a concise introduction to graph theory is presented in Chapter 2, followed by a geometric introduction to groups in Chapter 3. Maps and surfaces are combinatorially treated in Chapter 4. Chapter 5 introduces the concept of incidence structure through vertex colored graphs, and the combinatorial aspects of classical configurations are studied. Geometric aspects, some historical remarks, references, and applications of classical configurations appear in the last chapter. With over two hundred illustrations, challenging exercises at the end of each chapter, a comprehensive bibliography, and a set of open problems, Configurations from a Graphical Viewpoint is well suited for a graduate graph theory course, an advanced undergraduate seminar, or a self-contained reference for mathematicians and researchers.

8.Drugi pomembni rezultati projetne skupine^z

Revija Ars Mathematica Contemporanea, ki sta jo ustanovila prof. dr. Tomaž Pisanski in prof. dr. Dragan Marušič se je uvrstila na seznam SCI kot prva mednarodna matematična revija s področja matematike v Sloveniji.

D. Marušič je v letu 2011 postal rektor Univerze na Primorskem.

Š. Miklavič je prejel Zoisovo nagrado.

K. Kutnar, A. Malnič in D. Marušič, so dosegli izjemen uspeh. V soavtorstvu z žal že pokojnim prof. dr. Henryjem Gloverjem iz Ohio State University so objavili razpravo »Hamilton cycles in (2, odd, 3) - Cayley graphs« v eni najprestižnejših matematičnih revij »Proceedings of the London Mathematical Society«, ki izhaja že od leta 1865.

V. Batagelj je prejel nagrado INSNA's 2013 William D. Richards Software award za program Pajek.

Organizacija konferenc:

- Fourth Workshop on Formal Topology, Univerza v Ljubljani od 15. do 19. junija 2012.
- Workshop on Higher-dimensional Algebra, Categories and Types, 20. junija 2012 na Univerzi v Ljubljani.
- SODO 2012, Symmetries of Discrete Objects, Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012
- ATCAGC 2013: Algebraic, Topological and Complexity Aspects of Graph Covers, Bovec, Slovenia / 28 January - 1 February 2013
- Joint Workshop of Math Departments UP IAM and UP FAMNIT, Rogla, Slovenia / 17 - 19 May 2013
- CSASC 2013: Joint Mathematical Conference, Koper, Slovenia / 9 - 13 June 2013
- PhD Summer School in Discrete Mathematics, Rogla, Slovenia / 16 - 21 June 2013
- Conference on Geometry: Theory and Applications, Ljubljana, Slovenia / 24 - 28 June 2013
- Ljubljana-Leoben Graph Theory Seminar, 3-5 September, 2014, Koper, Slovenia
- 2014 PhD Summer School in Discrete Mathematics, Rogla, Slovenia / 29 June - 5 July 2014
- SYGN IV: Symmetries of Graphs and Networks IV, Rogla, Slovenia / 29 June - 5 July 2014

9.Pomen raziskovalnih rezultatov projektne skupine⁸

9.1.Pomen za razvoj znanosti⁹

SLO

To je bil prestižni projekt, podeljen s strani Evropske znanstvene fundacije preko programa EUROCORES/EuroGIGA. Pomemben je bil tudi zato, ker gre za enega redkih projektov, katerega vodja je bil Slovenec. To predstavlja pomembno priznanje slovenske teorije grafov, katere ustanovitelj je bil pred nekaj desetletji prav prof. Pisanski.

V okviru projekta je bilo dosegelih in objavljenih veliko pomembnih znanstvenih rezultatov, tako s strani uveljavljenih kot tudi mlajših znanstvenikov. Ti rezultati še dodatno potrjujejo kakovost in moč slovenske teorije grafov. Na področju teorije grafov delujejo v Sloveniji štirje raziskovalni programi. Trije najbolj uveljavljeni so bili vključeni v projekt. Vključene so bile tudi vse tri glavne univerze.

Med izvajanjem projekta smo organizirali več mednarodnih aktivnosti mreženja (konference, delavnice), ki so dodatno prispevale k povečanju mednarodne vpetosti. Uspešno sodelovanje s partnerji iz industrije na projektu bo v prihodnosti še dodatno prispevalo relevantne izzive iz gospodarstva, ki bodo vzpodbjali bolj ekonomsko relevantne raziskave z večjim učinkom, predvsem na področju analize velikih omrežij, socialnih omrežij in transportnih omrežij.

Več mladih raziskovalev je bilo vzgojeno tekom izvajanja projekta. Nekateri rezultati so bili objavljeni vrhunskih revijah na tem področju raziskav.

ANG

This was a prestigious project awarded by European Science Foundation under EUROCORES/EuroGIGA programme. It is important because it is one of the rare projects in the EUROCORES programme with the project leader from Slovenia. This is an important recognition of Slovenian graph theory schools, that started many decades ago with T. Pisanski being a pioneer.

Several new scientific results have been achieved in this field, by senior scientists as well as young ones, thus indicating the strength and the importance of the Slovenian graph theory. Four of seven mathematical research programmes work in this field, while three most

established ones took part in the project. All three main Slovenian universities were involved.

Networking activities organized within the project contributed to further development of the scientific collaboration network and increasing our research impact. Successful cooperation with the partners from industry opened new opportunities for a more focused research with higher impact motivated by real-world problems in large network analysis, social networks and transportation networks.

Working on topic related to the project several new young researchers were raised. Some of the publications were published in top journals in the field.

9.2. Pomen za razvoj Slovenije¹⁰

SLO

Projekt dodeljen s strani Evropske znanstvene fundacije slovenskemu vodji predstavlja pomembno priznanje za Slovenijo - preko uveljavljenega matematičnega področja, teorije grafov. Projekt je tako še dodatno utrdil prepoznavnost Slovenije na tem področju.

V projektu je poleg akademskih institucij sodelovalo še uspešno visoko-tehnološko podjetje Abelium, ki je pred leti nastalo kot "spin-off" iz raziskovalne skupine in programa P1-0294, katerega vodja je prof. T. Pisanski. S tem smo dodatno približali probleme iz gospodarstva raziskovalni sferi, predvsem na področju analize omrežij, socialnih in transportnih. Vrhunska znanstvena doganjana, kompetence in veščine se tako sistematično uporabljajo in nadgrajujejo tudi pri razvoju novih visokotehnoloških rešitev, za katere je podjetje v sodelovanju z različnimi globalnimi partnerji v zadnjih letih prejelo več inovacijskih nagrad (GoOpti, iOliva).

Potrditev kakovosti slovenske teorije grafov je v zadnjih letih prišla tudi s sprejetjem prve slovenske matematične znanstvene revije Ars Mathematica Contemporanea na lestvico SCI. Dodatno je bil prof. Pisanski sprejet v Academia Europae. Pajek, orodje za analizo velikih omrežij, je bil priznan za enega najpomembnejših akademskih orodij in je prejel nagrado s strani INSNA (International Network for Social Network Analysis): 2013 William D. Richards Software award. Med izvajanjem projekta in tudi kot del njega se tako strategija o doseganju vrhunske znanstvene odličnosti slovenske teorije grafov izpolnjuje ter odpira nove možnosti za doseganje močne vpetosti v gospodarstvo in ekonomsko relevantne učinke.

ANG

The project awarded by European Science Foundation to a Slovenian leader represents a high level of recognition to Slovenia - through the established mathematical field of graph theory. The project thus contributed additional increase of the visibility of Slovenia in this field.

Beside the academic institutions, a successful hi-tech company Abelium was involved as a partner, a spin-off from the research group and the programme P1-0294, lead by T. Pisanski. This has contributed to bridging the gap between business and research, especially in the fields of network analysis in social and transportation networks. Top scientific knowledge, competences and skills are systematically used and upgraded during development of hi-tech solutions - the ones the company have received several innovation awards in the past years (GoOpti, iOliva).

In the past few years Slovenian graph theory received additional recognition through Ars Mathematica Contemporanea, the first Slovenian mathematical scientific journal being indexed by SCI (since 2011). In addition, T. Pisanski was accepted to Academia Europae. Pajek, a large network analysis tool, was recognized as one of the top academic tools in the field and received the INSNA's 2013 William D. Richards Software award, by International Network for Social Network Analysis. The strategy of achieving scientific excellence of Slovenian graph theory was successfully carried out during the course of the project, additionally opening new opportunities for achieving better integration with business thus having higher economic relevance.

10.Samo za aplikativne projekte in podoktorske projekte iz gospodarstva!

13. Izjemni dosežek v letu 2014¹²**13.1. Izjemni znanstveni dosežek**

Kategorija:

GÓMEZ-NÚÑEZ, Antonio J., BATAGELJ, Vladimir, VARGAS-QUESADA, Benjamín, MOYA-ANEÓN, Félix de, CHINCHILLA-RODRÍGUEZ, Zaida. Optimizing SCImago Journal & Country Rank classification by community detection. *Journal of informetrics*, ISSN 1751-1577, 2014, vol. 8, iss. 2, str. 369-383. <http://dx.doi.org/10.1016/j.joi.2014.01.011>. [COBISS.SI-ID 17105241]

kategorija: 1A1 (Z, A'', A', A1/2); uvrstitev: SSCI, Scopus (d), Scopus, MBP; tipologijo je verificiral OSICD

V članku sta predstavljeni dve novi bibliografski klasifikaciji po predmetu pridobljeni s pomočjo orodja Pajek in algoritmov za razvrščanje na omrežju 18.000 revij na platformi SCImago Journal & Country Rank (SJR). Izvedena je primerjava z obstoječimi klasifikacijami SJR in WoS.

13.2. Izjemni družbeno-ekonomski dosežek

/

C. IZJAVE

Podpisani izjavljjam/o, da:

- so vsi podatki, ki jih navajamo v poročilu, resnični in točni
- se strinjamо z obdelavo podatkov v skladu z zakonodajo o varstvu osebnih podatkov za potrebe ocenjevanja ter obdelavo teh podatkov za evidence ARRS
- so vsi podatki v obrazcu v elektronski oblikи identični podatkom v obrazcu v pisni oblikи
- so z vsebino zaključnega poročila seznanjeni in se strinjajo vsi soizvajalci projekta

Podpisi:

*zastopnik oz. pooblaščena oseba
raziskovalne organizacije:*

in

vodja raziskovalnega projekta:

Univerza na Primorskem, Inštitut
Andrej Marušič

Tomaž Pisanski

ŽIG

Kraj in datum: Koper 16.3.2015

Oznaka poročila: ARRS-RPROJ-ZP-2015/227

¹ Napišite povzetek raziskovalnega projekta (največ 3.000 znakov v slovenskem in angleškem jeziku) [Nazaj](#)

² Napišite kratko vsebinsko poročilo, kjer boste predstavili raziskovalno hipotezo in opis raziskovanja. Navedite ključne ugotovitve, znanstvena spoznanja, rezultate in učinke raziskovalnega projekta in njihovo uporabo ter sodelovanje s tujimi partnerji. Največ 12.000 znakov vključno s presledki (približno dve strani, velikost pisave 11). [Nazaj](#)

³ Realizacija raziskovalne hipoteze. Največ 3.000 znakov vključno s presledki (približno pol strani, velikost pisave 11) [Nazaj](#)

⁴ V primeru bistvenih odstopanj in sprememb od predvidenega programa raziskovalnega projekta, kot je bil zapisan v predlogu raziskovalnega projekta oziroma v primeru sprememb, povečanja ali zmanjšanja sestave projektne skupine v zadnjem letu izvajanja projekta, napišite obrazložitev. V primeru, da sprememb ni bilo, to navedite. Največ 6.000 znakov vključno s presledki (približno ena stran, velikost pisave 11). [Nazaj](#)

⁵ Navedite znanstvene dosežke, ki so nastali v okviru tega projekta. Raziskovalni dosežek iz obdobja izvajanja projekta (do oddaje zaključnega poročila) vpišete tako, da izpolnite COBISS kodo dosežka – sistem nato sam izpolni naslov objave, naziv, IF in srednjo vrednost revije, naziv FOS področja ter podatek, ali je dosežek uvrščen v A" ali A'. [Nazaj](#)

⁶ Navedite družbeno-ekonomske dosežke, ki so nastali v okviru tega projekta. Družbeno-ekonomski rezultat iz obdobja izvajanja projekta (do oddaje zaključnega poročila) vpišete tako, da izpolnite COBISS kodo dosežka – sistem nato sam izpolni naslov objave, naziv, IF in srednjo vrednost revije, naziv FOS področja ter podatek, ali je dosežek uvrščen v A" ali A'.

Družbeno-ekonomski dosežek je po svoji strukturi drugačen kot znanstveni dosežek. Povzetek znanstvenega dosežka je praviloma povzetek bibliografske enote (članka, knjige), v kateri je dosežek objavljen.

Povzetek družbeno-ekonomskega dosežka praviloma ni povzetek bibliografske enote, ki ta dosežek dokumentira, ker je dosežek sklop več rezultatov raziskovanja, ki je lahko dokumentiran v različnih bibliografskih enotah. COBISS ID zato ni enoznačen, izjemoma pa ga lahko tudi ni (npr. prehod mlajših sodelavcev v gospodarstvo na pomembnih raziskovalnih nalogah, ali ustanovitev podjetja kot rezultat projekta ... - v obeh primerih ni COBISS ID). [Nazaj](#)

⁷ Navedite rezultate raziskovalnega projekta iz obdobja izvajanja projekta (do oddaje zaključnega poročila) v primeru, da katerega od rezultatov ni mogoče navesti v točkah 6 in 7 (npr. ni voden v sistemu COBISS). Največ 2.000 znakov, vključno s presledki. [Nazaj](#)

⁸ Pomen raziskovalnih rezultatov za razvoj znanosti in za razvoj Slovenije bo objavljen na spletni strani: <http://sicris.izum.si/> za posamezen projekt, ki je predmet poročanja [Nazaj](#)

⁹ Največ 4.000 znakov, vključno s presledki [Nazaj](#)

¹⁰ Največ 4.000 znakov, vključno s presledki [Nazaj](#)

¹¹ Rubrike izpolnite / prepišite skladno z obrazcem "izjava sofinancerja" <http://www.arrs.gov.si/sl/progproj/rproj/gradivo/>, ki ga mora izpolniti sofinancer. Podpisani obrazec "Izjava sofinancerja" pridobi in hrani nosilna raziskovalna organizacija –

izvajalka projekta. [Nazaj](#)

¹² Navedite en izjemni znanstveni dosežek in/ali en izjemni družbeno-ekonomski dosežek raziskovalnega projekta v letu 2014 (največ 1000 znakov, vključno s presledki). Za dosežek pripravite diapositiv, ki vsebuje sliko ali drugo slikovno gradivo v zvezi z izjemnim dosežkom (velikost pisave najmanj 16, približno pol strani) in opis izjemnega dosežka (velikost pisave 12, približno pol strani). Diapositiv/-a priložite kot priponko/-i k temu poročilu. Vzorec diapositiva je objavljen na spletni strani ARRS <http://www.arrs.gov.si/sl/gradivo/>, predstavite dosežkov za pretekla leta pa so objavljena na spletni strani <http://www.arrs.gov.si/sl/analyze/dosez/>. [Nazaj](#)

Priloga 1

Graphs in Geometry and Algorithms (EuroGIGA)

GReGAS Mid-term Report Submission deadline: 11 JANUARY 2013

Important :

- Part A1 of the form is to be completed by the Project Leader. Part A2 is to be completed by each Principal Investigator, including the Project Leader, and each Associated Partner.
- Part B of the form, provided separately, is to be completed by the Project Leader with input from the CRP members.
- The Project Leader should return the completed form (Part A and Part B combined) to ESF in a singleWord (.doc) document.

Part A. General information on the CRP and personnel

A.1. Overview of the CRP

CRP Number:	10-EuroGIGA-FP-007
CRP Title and Acronym:	Geometric representations and symmetries of graphs, maps and other discrete structures and applications in science (GReGAS)
Project Leader (PI 1):	Professor Tomaž Pisanski, Slovenia
Principal Investigator 2:	Professor Vladimir Batagelj, Slovenia
Principal Investigator 3:	Professor Türker Biyikoglu, Turkey
Principal Investigator 4:	Professor Sandi Klavžar, Slovenia
Principal Investigator 5:	Professor Antoaneta Klobucar, Croatia
Principal Investigator 6:	Professor Dragan Marusic, Slovenia
Principal Investigator 7:	Professor Martin Škoviera, Slovak Republic
Principal Investigator 8:	Professor Peter F. Stadler, Germany
Associated Partner 1:	Professor Leah Berman, United States
Associated Partner 2:	Professor Marston Conder and Dimitri Leemans, New Zealand
Associated Partner 3:	Professor Patrick Fowler, United Kingdom
Associated Partner 4:	Professor Wilfried Imrich, Austria
Associated Partner 5:	Professor Mikhail Klin, Israel
Associated Partner 6:	Professor Egon Schulte, United States
Associated Partner 7:	Professor Josef Leydold, Austria

CRP start and end dates: 01/04/2011 – 01/04/2014

CRP website: <http://www.gregas.eu>

Topics of the Call for Proposals addressed by the CRP

Please list the main topics of the Call for Proposals addressed by the CRP.*

- (i) Drawing graphs
- (ii) Geometric representations of graphs

(v) Graphs of polytopal structures

* Refer to the text of the Call for Proposals which has been provided to you.

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Tomaž Pisanski

Department of Technology
 Faculty of Mathematics and Physics
 University of Primorska
 Muzejski trg 2
 6000 Koper
 Slovenia
 Tel:
 Email: tomaz.pisanski@fmf.uni-lj.si

Amount of funding granted: 340000 Euros (due to austerity measures, the budget was reduced by approx 11%)

IP start and end date: 01/07/2011 – 30/6/2014

IP website: <http://www.gregas.eu>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

- (i) Drawing graphs: maps and configurations in the plane and other surfaces, chemical graphs
- (ii) Geometric representations of graphs: maps, symmetric configurations, coherent representation theory, chemical graphs, unit distance graphs, incidence geometries,
- (v) Graphs of polytopal structures : polyhedral maps, abstract polytopes, symmetries, classification

Scientific & technical personnel involved in the Individual Project (IP)**Personnel directly funded under the CRP budget**

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Bauer Andrej, researcher, University of Ljubljana, (since 1.7.2011), 2.5%
- Boben Marko, researcher, Abelium d.o.o. (since 1.7.2011), 5%
- Cvetko Vah Karin, researcher, University of Ljubljana, (since 1.7.2011), 5%
- Chen Hao, researcher, Abelium d.o.o., (1.7.2011 - 31.12.2011), (1.7.2011 - 31.12.2011), 23%
- Grašič Katja, researcher, Abelium d.o.o.(1.1.2011- 31.12.2011), 2.5%
- Horvat Boris, researcher, Abelium d.o.o. (since 1.7.2011), 5%
- Jaklič Gašper, researcher, University of Ljubljana (since 1.7.2011), 5%
- Kavkler Iztok, researcher, Abelium d.o.o. (since 1.7.2011), 17%
- Konvalinka Matjaž, researcher, University of Ljubljana (since 1.7.2011), 10%
- Orbanić Alen, researcher, University of Ljubljana (since 1.7.2011), 50%

- Petkovšek Marko, researcher, University of Ljubljana (since 1.7.2011), 2.5%
- Pisanski Tomaž, researcher, University of Ljubljana (since 1.7.2011), 40%
- Plestenjak Bor, researcher, University of Ljubljana (since 1.7.2011), 5%
- Potočnik Primož, researcher, University of Ljubljana (since 1.7.2011), 2.5%
- Ravnikar Martin, researcher, University of Primorska, Koper, 20%
- Žitnik Arjana, researcher, University of Ljubljana (since 1.7.2011), 15%
- Gašper Košmrlj, PhD student, Abelium d.o.o. (since 1.1.2012), 7.5%

Personnel funded through sources other than the CRP budget

(Name, position, nature of involvement)

- Nino Bašić, young researcher, PhD student, University of Primorska
- Katja Berčič, young researcher, PhD student, University of Primorska
- Gabriel Verret, postdoc researcher, University of Primorska
- Ajda Korošec, young researcher, PhD student, University of Primorska
- Boštjan Kovač, young researcher, PhD student, Abelium d.o.o.

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Vladimir Batagelj

Faculty of Mathematics and Physics

University of Ljubljana

Jadranska 19

1000 Ljubljana

Slovenia

Email: vladimir.batagelj@fmf.uni-lj.si

Amount of funding granted: 0 Euros (included under PI Pisanski)

IP start and end date: 01/07/2011 – 30/06/2014

IP website: <http://www.gregas.eu>, <http://vlado.fmf.uni-lj.si/>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

- (i) Drawing graphs: large network visualization and analysis, structure of large network, decomposition, evolution of networks
- (ii) Geometric representations of graphs: hierarchical representations, chemical and real life networks representation
- (v) Graphs of polytopal structures: /

Scientific & technical personnel involved in the Individual Project (IP)

Personnel directly funded under the CRP budget

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Batagelj Vladimir, PI, researcher, University of Ljubljana (since 1.7.2011), 33%
- Zaveršnik Matjaž, researcher, University of Ljubljana (since 1.7.2011), 10%

Both researchers are funded through the funds of PL Pisanski.

Personnel funded through sources other than the CRP budget

(Name, position, nature of involvement)

- Monika Cerinšek, young researcher, PhD student, Abelium d.o.o.
- Jernej Bodlaj, young researcher, PhD student, Abelium d.o.o.

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Türker Biyikoglu

Faculty of Arts and Sciences
 Department of Mathematics
 Isik University
 Sile 34980
 34980 Istanbul
 Turkey
 Email: turker.biyikoglu@isikun.edu.tr

Amount of funding granted: 62200 Euros

IP start and end date: 01/09/2011 – 1/9/2014 (temporary stop 1/5/2012 - 31/12/2012)

IP website: <http://math.isikun.edu.tr/turker/>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

- (i) Drawing graphs: /
- (ii) Geometric representations of graphs: near products, geometry and eigen vectors, landscapes, nodal domains, degree sequence of geometric graphs
- (v) Graphs of polytopal structures: /

Scientific & technical personnel involved in the Individual Project (IP)

Personnel directly funded under the CRP budget

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Türker Biyikoglu, researcher, Isik University (since 1.9.2011)

Personnel funded through sources other than the CRP budget

(Name, position, nature of involvement)

- /

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Sandi Klavžar

Faculty of mathematics and physics
 Department of Mathematics
 University of Ljubljana
 Jadranska 19
 1000 Ljubljana
 Slovenia
 Email: sandi.klavzar@fmf.uni-lj.si

Amount of funding granted: 0 Euros (included under PI Pisanski)

IP start and end date: 01/07/2011 – 30/06/2014

IP website: <http://www.gregas.eu>, <http://www.fmf.uni-lj.si/~klavzar/>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

- (i) Drawing graphs: drawing using decomposition to factors, drawing factor graphs
- (ii) Geometric representations of graphs: embedding into graph products, isometric embedding into partial cubes, fibonacci dimension of graph, 2-sum graphs, chemical graphs
- (v) Graphs of polytopal structures: /

Scientific & technical personnel involved in the Individual Project (IP)

Personnel directly funded under the CRP budget

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Jakovac Marko, researcher, University of Maribor (since 1.1.2012), 6%
- Taranenko Andrej, researcher, University of Maribor (since 1.7.2011), 10%
- Vesel Aleksander, researcher, University of Maribor, (since 1.7.2011) 2%
- Klavžar Sandi, researcher, University of Maribor, (since 1.7.2011) 7%
- Kovše Matjaž, researcher, University of Maribor, (1.7.2011 - 31.7.2011), 4%
- Janja Jerebic, researcher, University of Maribor (1.7.2011 - 31.7.2011), 1%
- Cabello Justo Sergio, researcher, University of Ljubljana (since 1.7.2011), 10%

In 2013 the following member will be included:

- Drago Bokal, researcher, University of Maribor (since 1.1.2013), 6%

Researchers are funded through the budget of PL Pisanski.

Personnel funded through sources other than the CRP budget

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Antoaneta Klobucar

Department of Mathematics

University J.J.Strossmayer

GajevTrg 6

31000 Osijek

Croatia

Email: aneta@efos.hr

Amount of funding granted: 108000Euros

IP start and end date: 01/05/2011 – 30/04/2014

IP website: <http://oliver.efos.hr/~aneta/indexhrv.html>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

(i) Drawing graphs: centrality measures in networks, edge betweenness centrality

(ii) Geometric representations of graphs: representation of large networks, highly and almost symmetric graphs

(v) Graphs of polytopal structures: representation of maps and polytopes, almost symmetric graphs

Scientific & technical personnel involved in the Individual Project (IP)

Personnel directly funded under the CRP budget

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Antoaneta Klobučar, researcher, University of Osijek, Croatia (since 1.5.2011), 40%
- Snježana Majstorović, researcher, University of Osijek, Croatia (since 1.5.2011), 10%
- Ivona Puljić, researcher, University of Osijek, Croatia (since 15.6.2011), 10%
- Damir Vukičević, researcher, University of Split, Croatia (since 1.5.2011), 30%
- Jelena Sedlar, researcher, University of Split, Croatia (since 1.5.2011), 8%
- Tanja Vojković, researcher, University of Split, Croatia (since 1.5.2011), 2%

Personnel funded through sources other than the CRP budget

(Name, position, nature of involvement)

- Ante Graovac, researcher (retired) - remark: prof.dr. Graovac died in December 2012.

A2. Individual Projects (IPs) / Associated Projects (APs)

Principal Investigator: *Please highlight any changes or corrections to the details below*

Professor Dragan Marusic

Faculty of Mathematics, Natural Sciences and Information Technologies
 University of Primorska
 Glagoljska 8
 6000 Koper
 Slovenia
 Email: dragan.marusic@upr.si

Amount of funding granted: 260000Euros

IP start and end date: 01/07/2011 – 30/06/2014

Professor Peter F. Stadler

Department of Computer Science / Bioinformatics
 Faculty of mathematics and Computer Science
 University of Leipzig
 Haertelstrasse 16-18
 04107 Leipzig
 Germany
 Email: peter.stadler@bioinf.uni-leipzig.de

Amount of funding granted: 229680Euros

IP start and end date: 01/07/2011 – 30/06/2014

IP website: <http://www.bioinf.uni-leipzig.de/~studla/>

Expertise contained in the IP which is relevant to the CRP objectives and topics of the Call for Proposals (keywords)

Keywords in relevance to the role of the PI and main topics of the Call for Proposals:

- (i) Drawing graphs: energy functions
- (ii) Geometric representations of graphs: combinatorial landscapes, chemical graphs, graphs in molecular biology, hierarchically organized graphs, phenotype graphs, cycle sets, cycle space
- (v) Graphs of polytopal structures: /

Scientific & technical personnel involved in the Individual Project (IP)

Personnel directly funded under the CRP budget

(Name, position, contract start/end dates; estimated percentage of work time dedicated to the programme)

- Matjaž Kovše, post doc researcher (01.03.2012 - 31.08.2012 and 01.10.2012 - 28.02.2013), 100%
- Lia Moheb, researcher (01.01.2013 - 31.01.2013), 50%
- Liliya Avdiyenko, researcher, (01.01.2012 - 28.2.2013), 50%

Remark: funds were not used in 2011 in order to employ postdocs PhD students and the postdoc from 2012 on.

Personnel funded through sources other than the CRP budget

(Name, position, nature of involvement)

- Lydia Ostermeier, PhD student in my group at the MPI MIS, will be financed from GReGAS starting in a few month until the end of the project has been funded by core funding so far. She has contributed primarily to GReGAS with her work on graph and hypergraph products.
- Konstantin Klemm, staff scientist at Univ Leipzig, has been contributing to work on combinatorial landscapes. He has been funded by Univ Leipzig.
- Peter F Stadler, professor, PI, funded by Univ Leipzig
- Marc Hellmuth, researcher at University Saarbruecken, before that staff member in Leipzig, has contributed to work on product structures and has been visiting the Leipzig group several times

Part B. Progress report

B1. CRP progress and scientific highlights (max. 1500 words)

1. The collaborative work (c.400-750 words)

- a. With reference to the CRP objectives and work plan, describe the work undertaken by the CRP to date and the contribution of each Individual Project to the collaboration in terms of its specific expertise and tasks/responsibilities. How closely are the partners working together?

(PL and PI 1, Pisanski)

- Using knowledge of Vega, Encyclopedia of Graphs was established. Several algorithms are implemented.
- Theory of maps (type graphs) was extended and used on chemical graphs. Three dimensional toroids were classified according to symmetries. Edge transitive maps were further studied.
- Geometric representations for curves studied. Graph representation in chemical graph theory and quantum mechanics approaches with further applications were studied.

(PI 2, Batagelj)

- Algorithms and visualization methods within the library net.Plexor were developed.
- Extensive analysis of scientific collaboration database ZENTRALBLATT for mathematics was carried out.
- Evolution networks were studied.

(PI 3, Biyikoglu)

- Characterizing connected graphs with given number of vertices and edges which achieve minimum algebraic connectivity. Addressing AGX-system conjecture from 2005.
- Study and solution of power allocation and partner selection policies problems solved in wireless networks, optimal algorithms.
- Study of molecular dendrimers, spectral radius, maximum Collatz–Sinogowitz index.

(PI 4, Klavzar)

- Study of Hamming dimension of a graph, Sierpinski graphs; the structure of Fibonacci cubes
- Sierpinski graphs were compared with Hanoi graphs w.r.t. their spanning embeddings
- Metric invariants were investigated, including distance polynomial functions, Wiener index in weighted graphs, and metric dimension of graphs (papers submitted)
- Convexity was investigated, especially the extremal properties of convex cycles.

(PI 5, Klobucar)

- *Large networks*: Wiener index and edge decomposition, eccentric connectivity index
- *Graph representations in mathematical chemistry and bioinformatics*: pi-electron currents, conjugated circuits, forcing number, upper and lower bounds on bond incident degree indices. Bond additive modelling. Atom bond connectivity index. K-domination on Hexagonal Catus Chains

(PI 6, Marusic)

- *Study of Hamilton paths/cycles in cubic*: Cayley graphs arising from certain groups; graph covers; connectivity of distance balanced graphs.
- *Classification of highly symmetric graphs*: cubic symmetric tricirculants and tetracirculants, bicyclic graphs with extremal values of PI-index, automorphism groups of rational circulant graphs.
- Applications in cryptography, geometric representations

(PI 7, Škoviera)

- *Graphs embeddings and immersions and highly symmetric maps*. work on classification of certain

types of groups and related embeddings/maps into surfaces, 2-groups, complete bipartite graph embeddings, regular maps with nilpotent automorphism groups, embeddings of n-dimensional cube graphs, construction of self-dual and self-Petrie regular maps, asymptotic formulas for certain classes of maps, relation between genus and cycle space,

- *Colourings, flows and configurations.* Sufficient condition in terms of point-line configurations for a Steiner triple system to be universal derived. Optimal acyclic edge-colourings of cubic graphs are described. Various structural properties of snarks are studied

(PI 8, Stadler)

- Exploration of connection between the geometric graph models of molecules and polymers and the graphs that represent the relationships among them; minimum cycle bases for graph products. New convex cycle bases introduced.
- A survey about hypergraph products has been published. In the theory of landscapes it has been shown how redundant non-invertible encodings in hard combinatorial optimization problems enhance optimization by enriching the density of low-energy states.
- An efficient heuristic for solving a problem of constructing alternative local multiple sequence alignments from a collection of local pairwise alignments has been developed.
- Graphs that are retracts of Cartesian products of chordal graphs have been characterized. R-retractions, R-cores, and R-cocores of graphs have been studied.

(AP 1, Berman)

- Developing new techniques for construction of configurations. Investigating monodromy groups of small polyhedra.

(AP 2, Conder/Leemans)

- Work on regular covers (with Malnic from team of PI Marušič); Symmetric and semi-symmetric 3-valent graphs of small order (with Potocnik from PI Pisanski); GI-graphs (with PI Pisanski and team member Zitnik); Regular maps on surfaces (with Siran from PI Skoviera); Regular and chiral maps with Leemans and cooperation with UNAM, Mexico.
- implementation of algorithms in Magma kernel, study of specific groups and related abstract, enumeration of chiral 3-polytopes of Suzuki groups, building atlases of chiral polytopes, studying rang 2 coset geometries arising from edge-transitive bipartite graphs, development of algorithms for finding apartments in coset geometries, studing of locally 2-arc-transitive complete bipartite graphs.

(AP 3, Fowler)

- Progress on single-molecule conduction. Shorter note on the conducting properties of fullerenes (conductivity). Relationships between the various graph theoretical conjugated circuit models. Using purely graph theoretical models to the explicitly quantum mechanical approaches used by chemists and physicists (Jahn-Teller graphs).
- Elected to Royal Society.

(AP 4, Imrich)

- Attended CSASC 2011 in Krems, SODO 2012 and CSD 6 networking activities. Published book together with PI Klavzar. Work on recognition of products and near products (AP Leydold, PIs Stadler, Klavzar)

(AP 5, Klin)

- IN 2012 spent 3 weeks at Slovakia. Worked with Gyurki (from PI Skoviera). Discovery of families of certain association schemes by using computation algebra.

(AP 6, Schulte)

- Work on chiral polytopes and graph representations of abstract polytopes.

(AP 7, Leydold)

- Study of molecular dendrimers, spectral radius, maximum Collatz–Sinogowitz index, connected

- | |
|--|
| <ul style="list-style-type: none"> graphs and minimum algebraic connectivity, AGX-system conjecture (see also entries of Biyikoglu) • Work on cycle bases for graph products, convex cycle base introduced (see also cooperation with PI Stadler). |
|--|

2. Scientific highlights (c.400-750 words)

- a. Describe the scientific highlights and main achievements of the CRP to date. What has been the most significant/valuable contribution to knowledge so far (e.g. results, breakthroughs)?

(PL Pisanski)

- prof. Pisanski elected into Academia Europeae, published a book on Configurations. Team released Encyclopedia of graphs (<http://atlas.gregas.eu/>)
- The journal Ars Mathematica Contemporanea indexed by SCI since 2011 (IF=0,4)
- All equivelar 4-toroids classified. Generalized Petersen graphs are unit-distance graphs. Edge-transitive maps of small genus classified. Type graphs of maps applied in chemistry. Link between graph theory and Jahn-Teller theorem established.

(PI 2 Batagelj)

- New algorithms for network analysis implemented (net.Plexor library, edge clustering, network multiplication, etc.)
- Paper on analysis of scientific collaboration accepted (with PhD student M. Cerinsek).

(PI 3 Biyikoglu)

- Significant progress on minimum algebraic connectivity and related AGX-system conjecture (with AP Leydold).
- Proved: polymeric molecules dendrimers have maximum spectral radius among all chemical trees (with AP Leydold).
- Solved power allocation and partner selection policies problems in wireless networks; constructed optimal algorithms based on matching theory.

(PI 4 Klavzar)

- The Hamming dimension of a graph introduced, bounds provided for the dimension of Sierpinski graphs. The canonical isometric representation explicitly described.
- Proved: Wiener index of a weighted graph can be expressed as the sum of the Wiener indices of weighted quotient graphs with respect to an arbitrary combination of Djokovic-Winkler-classes. Cut method can be used to compute an arbitrary distance moment of graphs isometrically embeddable into Cartesian products of triangles.
- An upper bound for the number of convex cycles in a given graph derived. Equality holds if and only if the graph is an even cycle or a Moore graph.

(PI 5 Klobucar)

- Several applications of graph theory in chemistry, bioinformatics, optimization, organization and analyzing of communication networks, etc. 17 articles published in journals, 1 article in a book.

(PI 6 Marusic)

- Classified cubic symmetric tricirculants, tetracirculants and automorphism groups of rational circulant graphs; Bicyclic graphs with extremal values of PI index.
- Prestigious publication in Proc. Lond. Math. Soc on Hamilton Cycles of Cayley graphs.
- New results on connectivity of bipartite distance-balanced graphs.

(PI 7 Škoviera)

- Classification and enumeration of 2-groups that factorise as a product of two cyclic groups with application on regular embeddings of bipartite graph.
- Classification regular maps:

- on non-orientable genus $3p+2$ (p odd prime),
- of n -dimensional cube graphs ,
- with automorphism group nilpotency class 2.
- Construction: infinite classes or regular maps that are both self-dual and self-Petrie-dual
- Asymptotic formulas for counting oriented and the number of reflexible maps; almost all maps are irreflexible.
- Matching numbers of intersection graphs of bases is characterized.
- Optimal acyclic edge-colourings of cubic graphs are described.
- Progress towards 6-decompositions of snarks has been made.

(PI 8 Stadler)

- An explicit construction of a minimum cycle bases for the lexicographic product of graphs G and H .
- Redundant non-invertible encodings in hard combinatorial optimization problems enhance optimization by enriching the density of low-energy states.
- An efficient heuristic for constructing alternative local multiple sequence alignments from a collection of local pairwise alignments developed, tested.
- Retracts of Cartesian products of chordal graphs characterized.
- 13 publications (submitted, accepted or published), 1 book chapter. Work presented at several international conferences.

(AP 1, Berman)

- New infinite classes of symmetric 3-configurations, new construction techniques developed.

(AP 2 Conder/Leemans)

- Determination of:
 - the smallest regular polytopes of any given rank;
 - all symmetric 3-valent graphs on up to 10,000 vertices
 - all regular maps of Euler characteristic -2 to -600, and all regular maps (and all chiral rotary maps) with up to 1000 edges
 - all regular and chiral polytopes with up to 1000 flags
- Construction of families of kaleidoscopic regular maps with trinity symmetry
- Development of new methods for finding all symmetric regular covers of a symmetric graph, and their application to various graphs
- local s-transitivity test developed in Magma kernel,
- Ree groups in characteristic 3 have only abstract regular polytopes of rank 3
- counted the number of chiral polytopes of rank three for a Suzuki group
- built up two atlases of chiral polytopes
- designed a new algorithm to find apartments in coset geometries

(AP 3 Fowler)

- Elected as a Fellow of the Royal Society (FRS).
- Established the mathematical background for definition of omniconducting graphs, chemical applications, conducting properties of fullerenes
- Successful use of purely graph theoretical models in quantum mechanical approaches.

(AP 4 Imrich)

- book published : Handbook of product graphs
- elected as a member of Academia Europea, section Informatics

(AP 5 Klin)

- 4 new infinite families of non-Schurian association schemes on $2p^2$ vertices, p an odd prime
- new infinite family of non-Schurian association schemes with 3 classes, which are invariant with respect to a suitable transitive action of groups $PSL(2,q)$, q is a prime-power.

(AP 6 Schulte)

- proved algebraic and combinatorial conditions for a polytop P that ensure action of automorphism on k -arcs of medial layer graph is transitive. Example families provide.

(AP 7, Leydold)

- see first two entries under PI Biyikoglu (joint work).
- new concept of convex cycle bases introduced and studied (with PI Stadler)

b. List up to five of your CRP's most significant joint publications(i.e. involving co-authors from at least two IPs in your CRP or co-authors from otherCRPs in the programme).

1. **Horvat, Boris and Kratochvil, Jan and Pisanski, Tomaž. On the computational complexity of degenerate unit distance representations of graphs. in Combinatorial algorithms, Lecture Notes in Comput. Sci. Vol. 6460. Springer, Heidelberg, 2011, 274--285**

2. ***Biyikoglu, Turker and Leydold, Josef,Dendrimers are the unique chemical trees with maximum spectral radius. MATCH 68(2012), 851--854.**

3. ***Sergio Cabello, Jean Cardinal, Stefan Langerman, The Clique Problem in Ray Intersection Graphs, Algorithms – ESA 2012, Lecture Notes in Computer Science Volume 7501, 2012, pp 241-252**

4. ***Conder, Marston and Nedela, Roman and Siran, Jozef, Classification of regular maps of Euler characteristic \$-3p\$.J. Combin. Theory Ser. B 102 (2012), 967--981. <http://dx.doi.org/10.1016/j.jctb.2011.11.003>**

5. A. Ceulemans, E. Lijnen, P.W. Fowler, R.B. Mallion, T. Pisanski : Graph Theory and the Jahn-Teller theorem, Proc. Roy. Soc. A 468 (2012) 971-989. DOI: 10.1098/rspa.2011.0508

B.2. Integration of the CRP in the programme (300-600 words)

1. Describe the contribution of your CRP to the EUROCORES programme. What is the place and role of the CRP in the framework of the programme? From a scientific perspective, how well integrated is your CRP in the programme? How would you describe the intensity of interaction between your CRP and other CRPs in the programme?

Our impression is that CRPs collaborate well. Of course, the cooperation can further improve. Networking events contribute the most. GReGAS CRP is established on the basis of long term EU and worldwide cooperation established around Slovenian, Austrian and Slovak graph theory cores. The coherence of the related network is based on strong personal and long term research relationships and periodic series of the conferences (every four years) with International conference of graph theory in Bled (Slovenia) GEMS workshops (Slovak Republic), SODO series (New Zealand) and other conferences filling the remaining year in the four year cycle held in different places (USA, Portugal, Mexico). Strong connections between Austrian and Slovenian groups are kept through Ljubljana-Leoben seminar every year. Recently, establishing the scientific journal *Ars Mathematica Contemporanea* (founding editors and editors-in-chief are PL Pisanski and PI Marušič) has even strengthened the cooperation and brought it to the next level. GReGAS project is one of the first projects linking the parts of the network working on a common project goals.

Members of our CRP have through Slovak partners strong connection with Czech scientists and through this to the project GraDR. Thus GReGAS has relatively good cooperation established with leaders of GraDR, while connections with other two CRPs are weaker.

In such a setting the four CRPs represent four strong groups and EUROGIGA programme is an excellent choice to enhance cooperation between the groups. Motivated by various applications in sciences and technologies, the topics addressed in EUROGIGA call have high potential of establishing links with industry and other top sciences. Beside the strong scientific team, Slovenian GReGAS team involves also an industrial partner, Abelium company, which is a form of a spin-off from the group of PL Pisanski still keeping strong cooperation, but also rapidly developing in the industrial field. We believe that (possible) applications of theory in technology represent the strong points of EUROGIGA related topics.

We hope the intensity of interaction between CRPs will further increase in the second part of the project. Perhaps it would be a good idea to try to find synergies for application of some FP7 or Horizon 2020 projects.

2. Describe the benefit to your CRP of being part of the EUROCORES programme (e.g. achieving critical mass of expertise, scale and scope, visibility, collaborative opportunities, ideas, etc.).

The main benefit of the EUROCORES programme is additional support for networking events which is an interesting concept providing enhancement mechanism for inter-project cooperation. CRPs itself contribute to better possibilities for work within the CRPs team. We can notice that exchange of young researchers (PhD students, post docs) and visits have increased and hope it will further increase in the second part of the project.

Networking events provide additional conferences and workshops “forcing” together different groups possibly providing “sparks” for new cooperations. So we absolutely support networking mechanisms.

B.3. Cross-CRP networking, training and dissemination (max. 750 words)

1. Which networking/training/dissemination activities have you or your CRP members participated in? Indicate how many team members participated in each activity.

Kick-off meeting, Paris:

- 2 GReGAS members attended the event

EuroGIGA Minisymposia at CSASC, 25-28 September 2011. Two minisymposia organized:

- "Algebraic and topological graph theory", Organizers: Roman Nedela (Banská Bystrica), Tomasz Pisanski (Ljubljana) - Organized by our CRP
- "Combinatorics and Graph Theory", Organizers: Michael Drmota (Vienna), Jan Kratochvíl (Prague), Marc Noy (Barcelona), Oriol Serra (Barcelona)
- 9 GReGAS members attended the event

SODO 2012 - Symmetries of Discrete Objects Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012:

- 16 GReGAS members attended the event

EuroGIGA Session in Assisi, on March 22, 2012, Assisi, Italy

- 1 GReGAS members attended the event

Eurogiga Midterm Conference, July 9-13, 2012, Prague, Czech Republic

- 13 GReGAS members attended the event

Computers in Scientific Discovery 6, August 21-25, Portorož, Slovenia

- 25 GReGAS members attended the event

2. **Networking activities.** Describe *the most important networking activity* for your CRP to date (in terms of impact, outcome, creation of synergy and cooperation within or outside the programme).

SODO 2012 - Symmetries of Discrete Objects Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012:

- traditional conference, organized every 4 years
- Organized by PL Pisanski (GReGAS) and main organizer GReGAS AP Conder,
- 16 GReGAS members attended the event, 1 GraDR member
- <http://www.math.auckland.ac.nz/~conder/SODO-2012/>
- traditional conference
- 67 participants from all over the world
- several research project/collaboration work on papers started or continued
- contact between GReGAS and GraDR was strengthened

3. **Training activities.** Describe *the most useful training activity* to date (workshop, course, school, etc.) undertaken by senior or junior researchers of your CRP.

- Within SODO 2012 a Magma workshop was organized.
- Two-week Summer school, "Topics in Algebraic graph theory" (Banská Bystrica, Slovakia).
- PhD Summer School in Discrete Mathematics and Symmetries of Graphs and Networks III (Rogla, Slovenia)

4. **Dissemination activities.** Describe the *most valuable dissemination activity (or activities)* your team has undertaken so far, with respect to (i) the scientific community and (ii) the wider public. Describe the outcome and impact of these activities in terms of promoting your field of research and the EUROCORES programme.

Organisation or co-organisation of events:

- 7th Slovenian International Conference on Graph Theory, Bled, Slovenia, 19 – 25 June 2011
- Meeting “Mathematics and Art”, Ljubljana, Slovenija, junij, 2011
- Annual meeting of International academy for mathematical chemistry, Bled, Slovenija, junij 2011
- CSASC 2011, Krems Austria, T. Pisanski, R. Nedela chairing "Algebraic and topological graph theory" session. Also organization of EUROCIGA session.
- SODO 2012, Symmetries of Discrete Objects, Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012
- Computers in Scientific Discovery (CSD) conference: CSD6 August 2012, Portorož, SI. This meeting had participants from chemistry, mathematics & computer science, with a strong representation from GREGAS researchers, and invited speakers included Nobel Laureate Sir Harold Kroto, whose seminal work on fullerenes is central to our theme of using graph theoretical ideas in chemical applications.

Associate partners

- Royal Society Workshop: Symmetry, Rigidity & Periodicity in Natural & Engineered Structures, Chicheley Hall, Feb. 2012 (P. W. Fowler, initiator and co-organizer)
- Aromaticity, International Conference on Physical Organic Chemistry (ICPOC21), Durham Sept, 2012 (P. W. Fowler, co-organizer)

5. List the cross-CRP activities your CRP has organised or co-organised. If your CRP has not been involved in organising any cross-CRP activity to date, what activities do you intend to propose and organise in the future?

EuroGIGA Minisymposia at CSASC, 25-28 September 2011. GReGAS PL Pisanski and PI Nedela organized one of two EuroGIGA minisymposia:

- "**Algebraic and topological graph theory**", Organizers: Roman Nedela (Banská Bystrica), Tomasz Pisanksi (Ljubljana) - Organized by our CRP
- "**Combinatorics and Graph Theory**", Organizers: Michael Drmota (Vienna), Jan Kratochvíl (Prague), Marc Noy (Barcelona), Oriol Serra (Barcelona)
- 43 participants.
- Organizers: GReGAS + GraDR
- web: <http://www.dmg.tuwien.ac.at/OMG/OMG-Tagung/>

SODO 2012 - Symmetries of Discrete Objects Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012:

- 67 Participants.
- Organizers: GReGAS + GraDR
- web: <http://www.math.auckland.ac.nz/~conder/SODO-2012/>

Computers in Scientific Discovery 6, August 21-25, Portorož, Slovenia

- Scientific committee: Tomaž Pisanski (chair), Patrick Fowler, Klavdija Kutnar.
- Organizing committee: Klavdija Kutnar (chair), Boštjan Frelih, Ademir Hujdurović, Alen

- Orbanić, Tomaž Pisanski.
- o web: <http://csd6.imfm.si>
- o 57 participants

Future:

- o CSASC 2013, Koper, Slovenia. <http://conferences2.imfm.si/conferenceDisplay.py?confId=14>
- o GEMS 2013, Smolenice, Slovakia. <http://univac.savbb.sk:8080/gems13/>

B.4. Publications, dissemination and outreach

Important: In your lists, include only those publications which resulted to a significant extent from work undertaken in the framework of the CRP or from collaboration with other CRPs. Note that all such publications should bear an acknowledgement of the EuroGIGA programme.

In addition:

- List *all* authors.
- Identify with an asterisk (*) publications which acknowledge the EUROCORES programme.
- Underline publications/presentations involving co-authors from at least two IPs within your CRP.
- **Mark in bold publications/presentations involving co-authors from other CRPs in the programme.**

Publications

- Articles

Peer-reviewed articles in journals (published, in press or submitted)

Presentations in scientific meetings

- Oral presentations (indicate invited / keynote talks)

7th Slovenian International Conference on Graph Theory, Bled, Slovenia, June 2011 (majority of project members, invited speakers: Škoviera, Imrich, Schulte)

T. Pisanski. Meeting "Mathematics and Art", Ljubljana, Slovenija, June 2011

T. Pisanski. Workshop on Symmetry in Graphs, Maps, and Polytopes, Toronto, Canada, October 2011 (invited speaker)

T. Pisanski. The 35th Australasian Conference on Combinatorial Mathematics & Combinatorial Computing, Monash University, Melbourne, Australia, December 2011

Batagelj Vladimir, Cerinšek Monika, Horvat Boris: Network analysis of Zentralblatt MATH data. 7th Slovenian

International Conference on Graph Theory, Jun 2011, Bled, Slovenia.

Bodlaj Jernej, Batagelj Vladimir, Orbanić Alen: OpenGL® Graphical User Interface for net.Plexor - Interactive Large Network Analysis Library. 7th Slovenian International Conference on Graph Theory, Jun 2011, Bled, Slovenia.

Batagelj Vladimir, Cerinšek Monika, Horvat Boris, Pisanski Tomaž: Exploring the structure of mathematical publications, CSASC 2011, September 2011, Krems, Austria.

Batagelj Vladimir, Cerinšek Monika, Horvat Boris, Pisanski Tomaž: The structure of mathematics from Zentralblatt MATH data. 16th Young Statisticians Meeting, October 2011, Rijeka, Croatia.

Batagelj Vladimir, Cerinšek Monika, Horvat Boris, Pisanski Tomaž: The structure of mathematics from the Zentralblatt MATH data base. Sunbelt XXXII, March 2012, Redondo Beach, CA, USA.

Breznik Kristijan, Batagelj Vladimir: Network analysis of tennis games in the Open Era. Sunbelt XXXII, March 2012, Redondo Beach, CA, USA.

Sandi Klavžar: Fibonacci cubes, generalized Fibonacci cubes, and bad words, invited plenary talk at Combinatorics 2012, Perugia, Italy, September 2012 (invited talk).

Sandi Klavžar: Generalized Fibonacci cubes and three related problems on binary words, invited plenary talk at The 21st Workshop '3in1', Krakow, Poland, November 2012 (invited talk).

Aleksander Vesel: Linear recognition and embedding of Fibonacci cubes, talk at Combinatorics 2012, Perugia, Italy, September 2012 (invited talk).

Math Chem Comp, Dubrovnik (13.6.-18.6.2011) // Snjezana Majstorovic, Antoaneta Klobucar: K-domination on hexagonal chain cacti (talk)

EuroGiga Midterm Conference, July 2012, Prague, Czech Republic // Snjezana Majstorovic: Domination on m-ary chain cacti (talk)

8th Meeting of the International Academy of Mathematical Chemistry, June 2012, Verona, Italy // Snjezana Majstorovic: Bounds and relations involving betweenness centrality in some families of graphs (talk)

MATH/CHEM/COMP 2011 (Dubrovnik) // Sedlar Jelena, Vukičević Damir, Rajtmajer Sarah Michele, "On ordering alkanes by modified Zagreb indices" //

7th Slovenian International Conference on Graph Theory (Bled, 2011) // D. Vukičević, "Community detection in complex networks"

7th Slovenian International Conference on Graph Theory 19-25 June 2011, Bled, Slovenia

- Martin Skoviera: Snarks - Recent development (keynote lecture)
- Ján Karabáš: Classification of Edge-transitive Maps Michal Kotrbčík: High-genus Embeddings
- Martin Mačaj: Nonorientable Regular Maps Over Linear Fractional Groups
- Roman Nedela: Asymptotic Enumeration of Reversible Maps Regardless of Genus

23rd British Combinatorial Conference University of Exeter, 4-8 July, 2011.

- Jozef Širáň, Nonorientable regular maps of any given type over linear fractional groups

IWONT 2011 International Workshop on Optimal Network Topologies Brussels, Belgium, July 11 - 15, 2011

- Jana Siagiova: Cayley graphs in the degree-diameter problem (keynote lecture)
- Martin Knor: On 3-arc graphs
- Martin Mačaj: Search for properties of the missing Moore graph
- Maria Zdimalova: A family of large vertex-transitive graphs of diameter 2

Group Actions on Combinatorial Structures Beijing, August 21-27, 2011

- Martin Skoviera Regular maps with nilpotent automorphism groups
- Ján Karabáš: Discrete groups of automorphisms of orientable surfaces
- Roman Nedela: Discrete groups of automorphisms of surfaces with given genus
- Jozef Siran: External symmetries of regular maps

Workshop on Symmetry in Graphs, Maps, and Polytopes Fields Institute Toronto, October 24-27, 2011

- Martin Skoviera: Regular maps with nilpotent automorphism groups
- Jan Karabas: Classification of edge-transitive maps
- Martin Macaj: Nonorientable Regular Maps and Residual Finiteness of Triangle Groups
- Roman Nedela: Vertex Transitive and Edge Transitive Polytopes and 2-Dimensional Orbifolds
- Jozef Siran: External Symmetries of Regular and Orientably Regular Maps

AMS Special Session on Topological Graph Theory, Structure and Symmetry, Boston, January 4-7, 2012

- Martin Skoviera: Locally Maximal Embeddings of Graphs in Orientable Surfaces (invited lecture)
- Roman Nedela: A recent progress in map enumerations (invited lecture)
- Roman Nedela: Vertex transitive polyhedral maps and actions of discrete groups on surfaces (invited lecture)

ATCAGC 2012 Workshop on Algebraic, Topological and Complexity Aspects of Graph Covers 26th - 31st January 2012, Eugene, Oregon

- Roman Nedela: Flows and graph coverings

SODO 2012 Symmetries of Discrete Objects Conference and MAGMA Workshop Queenstown, New Zealand, 12-17 February 2012

- Jan Karabas: Discrete group actions on orientable surfaces
- Martin Macaj: On the Wilson operators
- Jozef Siran: Imprimitivity of locally finite, 1-ended, planar graphs

Eurogiga Midterm Conference Prague, July 9-13, 2012

- Martin Skoviera: Regular maps with nilpotent automorphism groups (invited lecture)

IWONT 2012 The 5th International Workshop on Optimal Network Topologies July 27 – 29, 2012 Institut Teknologi Bandung, Indonesia

- Jozef Siran: A survey of algebraic methods in the degree-diameter problem (keynote lecture)
- Martin Knor: Graphs with given degree and diameter on the smallest number of vertices
- Jana Siagiova: Quotients of large vertex-transitive and Cayley graphs of given degree and diameter

ACCOTA 2012 International Workshop Combinatorial and Computational Aspects of Optimization, Topology and Algebra December 3 to 7, 2012. Huatulco, Oaxaca, México

- Martin Skoviera: Odd decompositions of regular eulerian graphs of odd orders
- Jozef Siran: Algebraic methods in the degree-diameter problem

Leydold, Josef. 2012. Generating Generalized Inverse Gaussian Distributed Random Variates. Monte Carlo and Quasi-Monte Carlo Methods 2012, Sydney, Australien, 13.02.-17.02.

Leydold, Josef. 2011. Convex Cycle Bases. 7th Slovenian International Conference on Graph Theory, Bled, Slowenien, 20.06.-24.06.

- Posters

Computers in Scientific Discovery conference, August 2012, Portoroz (Slovenia) //
Ivona Puljic: Upper and lower bound for Roman domination number of cardinal product of paths, (which was a joint work with Croatian PI Antoaneta Klobucar)

- Other (*please define*)

Balakrishnan, R. and Bapat, R. B. and Klav\v{z}ar, Sandi and, Preface [Recent trends in graph theory and combinatorics]. Discrete Math. 312 (2012), 1493. <http://dx.doi.org/10.1016/j.disc.2011.12.025> (Introduction)

Bratislava Graph Theory Seminar (Regular seminar on graph theory and combinatorics)
Head of the seminar: Martin Skoviera Weekly (during the semester) at Comenius University, Bratislava Slovakia

Seminar for Discrete Mathematics, Institute of Mathematics, Physics and Mechanics, Ljubljana. Head of the seminar: Tomaž Pisanski.

Annual meeting of the slovak part of the GReGAS team. December 5 to 12 2011 and December 11 to 15 2012
Mosonmagyarovar, Hungary

AGT in BB Algebraic Graph Theory in Banska Bystrica, August/September 2012, Matej Bel University, Banska Bystrica Slovakia

- Programme Committee: Mikhail Klin, Roman Nedela and Martin Macaj (all members of GReGAS)
- Organizing Committee: Martin Macaj, Jan Karabas (both GReGAS) and Stefan Gyurki

In addition, Slovenian PL and PI teams achieved the following:

- Organization of the conference Computers in Scientific Discovery with a plenary speaker, prof. Harold Kroto, nobel laureate (discovery of C₆₀ fulleren)
- proj. member prof. Konvalinka received award of University of Ljubljana given to best teachers.
- A project financed by Picker Institute (USA, Colgate University) continued into the 2nd year as the results for the first year were very good.
- Pisanski appointed to the Publications Committee of European Mathematical Society.
- PI prof. Marusic was elected as rector of the University of Primorska.
- project member prof. Miklavic received national award for science (Zois prize).

Unpublished lecture: Leydold, Josef. 2012. Sign patterns of graph laplacian eigenvectors. Istanbul Discrete

Mathematics Meetings, Istanbul, 27.04.

B.5. Feedback on the EUROCORES programme and EUROCORES scheme

Any other comments on the EUROCORES programme in particular or the EUROCORES scheme in general.

/

Priloga 2

EuroGIGA

GReGAS
Final report (Sections B and C)

Deadline: 1/12/2014

Section B. Progress report

B1. CRP progress and scientific highlights (max. 1500 words)

1. The collaborative work (c.400-750 words)

- a. With reference to the CRP objectives and work plan, describe the work undertaken by the CRP and the contribution of each Individual Project to the collaboration in terms of its specific expertise and tasks/responsibilities. How closely did the partners work together?

PI1-Pisanski

- Encyclopaedia of Graphs was established. Several algorithms developed.
- Theory of maps (type graphs) was extended, used on chemical graphs. Various classes of maps were classified.
- Geometric representations for curves were studied.
- Graph representations in chemical graph theory, quantum mechanics approaches with further applications were studied.

PI2-Batagelj

- Algorithms and visualization methods within the libraries net.Plexor, TQ and Ianus were developed.
- Extensive analysis of scientific collaboration database ZENTRALL BLATT for mathematics was carried out.
- Dynamic networks were studied.

PI3-Biyikoglu

- Classification of graphs achieving minimum algebraic connectivity.
- Study of power allocation and partner selection polices problems in wireless networks, molecular dendrimers, spectral radius, maximum Collatz–Sinogowitz index; relationships between graph invariants; spectral bounds for maximum induced matching problem
- Analysis of metabolic pathways, work on de novo peptide sequencing
- Modeling social communication (anonymity) with graph theory.

PI4-Klavzar

- Study of Hamming dimension of a graph, Sierpinski graphs; the structure of Fibonacci cubes
- Sierpinski graphs were compared with Hanoi graphs w.r.t. their spanning embeddings
- Metric invariants were investigated, including distance polynomial functions, Wiener index in weighted graphs, and metric dimension of graphs (papers submitted)
- Convexity was investigated, especially the extremal properties of convex cycles.
- Lambda-labelling of product graphs and related classes were studied.

PI5-Klobucar

- *Large networks:* Wiener index and edge decomposition, eccentric connectivity index, social networks
- *Graph representations in mathematical chemistry and bioinformatics:*, pi-electron currents, conjugated circuits, forcing number, upper and lower bounds on bond incident degree indices. Bond additive modelling. Atom bond connectivity index. K-domination on Hexagonal Catus Chains
- Roman-dominations on cardinal product of path and cycles studied.

PI6-Marusic

- *Study of Hamilton paths/cycles in cubic:* Cayley graphs arising from certain groups; graph covers; connectivity of distance balanced graphs.
- *Classification of highly symmetric graphs:* cubic symmetric tricirculants and tetracirculants, bicyclic graphs with extremal values of PI-index, automorphism groups of rational circulant graphs.
- Applications in cryptography, geometric representations

PI7-Škoviera

- *Graphs embeddings and immersions and highly symmetric maps.* work on classification of certain types of groups and related embeddings/maps into surfaces, 2-groups, complete bipartite graph embeddings, regular maps with nilpotent automorphism groups, embeddings of n-dimensional cube graphs, construction of self-dual and self-Petrie regular maps, asymptotic formulas for certain classes of maps, relation between genus and cycle space, local maxima in the stratified system of all graph embeddings described.
- *Colourings, flows and configurations.* Sufficient condition in terms of point-line configurations for a Steiner triple system to be universal derived. The existence of 4-line Fano colourings for a very general class of snarks confirmed. Study of snarks, optimal acyclic edge-colourings of cubic graphs.

(PI 8, Stadler)

- Exploration of connection between the geometric graph models of molecules and polymers and the graphs that represent the relationships among them
- Survey about hypergraph products has been published.
- Characterization of retracts of Cartesian products of chordal graphs.
- Characterization of recombination on strings as transit function was done.
- A unified framework for linear and circular multiple sequence alignments was established.
- A new formalization of graph editing, relaxed square property and topology of elementary cycles, connective spaces and application in landscape theory were studied.

(AP 1, Conder/Leemans)

- Work on regular covers (with PI6); Symmetric and semi-symmetric 3-valent graphs of small order (with PI1); GI-graphs (with PI1); Regular maps on surfaces (with PI7); Regular and chiral maps with Leemans.
- implementation of algorithms in Magma kernel, study of specific groups and related abstract polytopes, various enumeration and generation algorithms for groups, abstract polytopes, apartments and coset geometries..
- Investigation of arc-types of vertex-transitive graphs (with PI1); new discoveries about half-arc-transitive graphs (with PI1 and PI6); investigation of regular maps with nilpotent automorphism groups (with PI7); construction of chiral maps of all possible types (with PI7).

AP2-Fowler

- Progress on single-molecule conduction. Short note on the conducting properties of fullerenes (conductivity). Relationships between the various graph theoretical conjugated circuit models. New purely graph theoretical models of quantum mechanical approaches to distortion used by chemists and physicists (Jahn-Teller graphs).
- Elected to Royal Society, citation included work on graph-theoretical modelling of currents.
- New classification by nullity of omni-conductors and insulators. Chemical counterexamples for conjugated-circuit theory.

AP3-Imrich

- Attended CSASC 2011 in Krems, SODO 2012, CSD 6, CSASC 2013 and LL 2014 networking activities.
Published book together with PI Klavzar. Work on recognition of products and near products (AP Leydold, PIs Stadler, Klavzar)

AP4-Klin

- IN 2012 spent 3 weeks at Slovakia. Worked with Gyurki (from PI7). Discovery of families of certain association schemes by using computation algebra.
-

AP5-Schulte

- Work on chiral polytopes and graph representations of abstract polytopes.

2. Scientific highlights (c.400-750 words)

- a. Describe the scientific highlights and main achievements of the CRP. What has been the most significant/valuable contribution to knowledge (e.g. results, breakthroughs)?

PL-Pisanski

- Professor Pisanski elected into Academia Europeae, published a book on Configurations.
- Encyclopedia of graphs released (<http://atlas.gregas.eu/>)
- Database of cubic vertex transitive graphs up to 1280 vertices generated.
- The journal Ars Mathematica Contemporanea indexed by SCI since 2011 (IF=0,4)
- Classification and characterization: equivelar 4-toroids, generalized Petersen as unit-distance graphs, Edge-transitive maps of small genus. G-laterals of certaion configurations. Medial symmetry maps.
- Applications: Type graphs in chemistry. Graph theory and Jahn-Teller theorem. Strong traces introduced in synthetic biology, Map representation of DNA. Complex web side organization.

PI2-Batagelj

- New algorithms for network analysis implemented (in new libraries: net.Plexor, TQ, Ianus)
- 3 papers on bibliographic network analysis
- Received INSNA's William D. Richards Jr., Software Award (2013) for Pajek

PI3-Biyikoglu

- Progress on minimum algebraic connectivity, AGX-system conjecture
- Proved: polymeric molecules dendrimers have maximum spectral radius among all chemical trees
- New algorithms: power allocation and partner selection polices problems in wireless, de novo sequencing, constrained alignment framework for the comparative analysis of a pair of metabolic pathways
- Proved: rigorous relationship between several graph invariants, including entropy, Randic index and degree assortativity.
- Graph model for multi party off-the-record communication
- Spectral bounds for maximum induced matching

PI4-Klavzar

- An upper bound for the number of convex cycles in a given graph derived. Equality holds if and only if the graph is an even cycle or a Moore graph.
- Proved that the Wiener index of a weighted graph can be expressed as the sum of the Wiener indices of weighted quotient graphs with respect to an arbitrary combination of Djokovic-Winkler-classes. Cut method can be used to compute an arbitrary distance moment of graphs isometrically embeddable into Cartesian products of triangles.

PI5-Klobucar

- Several applications of graph theory in chemistry, bioinformatics, optimization, organization and analysis of communication networks, etc. 17 articles published in journals, 1 article in a book.

- Generalised network descriptors were investigated
- Network organization, network analysis and information protection were investigated

PI6-Marusic

- Classified cubic symmetric tricirculants, tetracirculants and automorphism groups of rational circulant graphs; Bicyclic graphs with extremal values of PI index.
- Characterized tetravalent one regular graphs of order p^2 , symmetric Tabačjn graphs, pentavalent act-transitive bicirculants, half-arc transitive graphs with small alternets, cubic-symetric tri- and penta-circulants.
- Prestigious publication in Proc. Lond. Math. Soc on Hamilton Cycles of Cayley graphs.
- Several new results related to: connectivity of bipartite distance-balanced graphs, identifiable subgraphs, equistable graphs, threshold and domishold graphs, square roots of graphs, CIS circulants, claw freeness, domination.

PI7-Škoviera

- Classification and enumeration of 2-groups that factorise as a product of two cyclic groups with application on regular embeddings of bipartite graph.
- Classification of various classes of regular maps
- Construction: infinite classes of regular maps that are both self-dual and self-Petrie-dual
- Asymptotic formulas for counting oriented and the number of reflexible maps
- Matching numbers of intersection graphs of bases is characterized.
- Optimal acyclic edge-colourings of cubic graphs are described.
- Progress towards 6-decompositions of snarks.

PI8-Stadler

- An explicit construction of a minimum cycle bases for the lexicographic product of graphs.
- Application of redundant non-invertible encodings in hard combinatorial optimization problems
- An efficient heuristic for constructing alternative local multiple sequence alignments from a collection of local pairwise alignments developed, tested.
- Retracts of Cartesian products of chordal graphs characterized.
- Uniqueness of prime factorization of thin hypergraphs w.r.t. strong products has been proved and factorization algorithm is given.

AP1 Conder

- Significant progress in generation and counting, of small regular polytopes, symmetric 3-valent graphs, regular maps and regular and special classes of chiral polytopes, regular Cayley maps for cyclic groups. Building several abstract polytope atlases.
- Construction of special families maps, half-arc transitive graphs, symmetric regular covers of kaleidoscopic regular maps with trinity symmetry
- Algorithms, local s-transitivity in Magma, finding apartments in coset geometries,
- Conder selected by the American and New Zealand Mathematical Societies as the first Maclaurin Lecturer, given the title of Distinguished Professor at the University of Auckland, and elected a Fellow of the American Mathematical Society

AP2-Fowler

- Elected as a Fellow of the Royal Society (FRS).
- Established the mathematical background for definition of omniconducting graphs, chemical applications, conducting properties of fullerenes
- Successful use of purely graph theoretical models in quantum mechanical approaches
- Use of symmetry and graph theory for framework rigidity in engineering structures

AP3-Imrich

- book published : Handbook of product graphs
- elected as a member of Academia Europea, section Informatics

AP4-Klin

- 4 new infinite families of non-Schurian association schemes on $2p^2$ vertices, p an odd prime
- new infinite family of non-Schurian association schemes with 3 classes, which are invariant with respect to a suitable transitive action of groups $PSL(2, q)$, q is a prime-power.

AP5-Schulte

- proved algebraic and combinatorial conditions for a polytope P that ensure action of automorphism on k-arcs of medial layer graph is transitive. Example families provide.

- b. List up to five of your CRP's most significant joint publications (i.e. involving co-authors from at least two IPs in your CRP or co-authors from other CRPs in the programme).

1. *Cabello S., Chimani M., Hliněný P., Computing the stretch of an embedded graph. *SIAM journal on discrete mathematics*, ISSN 0895-4801, 2014, vol. 28, no. 3, str. 1391-1401

2. *Biyikoglu, Turker and Leydold, Josef, Dendrimers are the unique chemical trees with maximum spectral radius. *MATCH* 68(2012), 851--854.

3. *Sergio Cabello, Jean Cardinal, Stefan Langerman, The Clique Problem in Ray Intersection Graphs, *Algorithms – ESA 2012, Lecture Notes in Computer Science Volume 7501*, 2012, pp 241-252

4. *Conder, Marston and Nedela, Roman and Siran, Jozef, Classification of regular maps of Euler characteristic \$-3p\$. *J. Combin. Theory Ser. B* 102 (2012), 967--981. <http://dx.doi.org/10.1016/j.jctb.2011.11.003>

5. *S.Majstorovic, D.Stevanovic „A note on graphs whose largest eigenvalues of the modularity matrix equals zero“, *Electronic Journal of Linear Algebra* vol 27, 256 (2014)

B.2. Integration of the CRP in the programme (300-600 words)

1. Describe the contribution of your CRP to the EUROCORES programme. What was the place and role of the CRP in the framework of the programme? From a scientific perspective, how well integrated was your CRP in the programme? How would you describe the intensity of interaction between your CRP and other CRPs in the programme?

Our impression is that CRPs collaborate well. Networking events contributed to this the most. GReGAS CRP is established on the basis of long term EU and worldwide cooperation established around Slovenian, Austrian and Slovak graph theory cores. The coherence of the related network is based on strong personal and long term research relationships and periodic series of the conferences (every four years) with International conference of graph theory in Bled (Slovenia) GEMS workshops (Slovak Republic), SODO series (New Zealand) and other conferences filling the remaining year in the four year cycle held in different places (USA, Portugal, Mexico). Strong connections between Austrian and Slovenian groups are kept through Ljubljana-Leoben seminar every year. Establishing the scientific journal *Ars Mathematica Contemporanea* (founding editors and editors-in-chief are PL Pisanski and PI Marušič) turned to be an important strategic decision, which have even strengthened the cooperation and brought it to the next level. GReGAS project is one of the first projects linking the parts of the network working on the common project goals. In the past and still on-going there were various smaller bilateral projects running between the different groups within the project.

Members of our CRP have, through Slovak partners, a strong connection with Czech scientists and through this to the project GraDR. Thus GReGAS has relatively good cooperation established with leaders of GraDR, while connections with other two CRPs are weaker, but getting stronger especially through researchers working on crossing number and computational geometry.

In such a setting the four CRPs represent four strong groups and EUROGIGA programme is an excellent choice to enhance cooperation between the groups. Motivated by various applications in sciences and technologies, the topics addressed in EUROGIGA call have high potential of establishing links with industry and other top sciences. Beside the strong scientific team, Slovenian GReGAS team involves also an industrial partner, Abelium company, which is a form of a spin-off from the group of PL Pisanski still keeping strong cooperation, but also rapidly developing in the industrial field. We believe that (possible) applications of theory in technology represent the strong points of EUROGIGA related topics.

We hope that the cooperation between groups in CRPs will lead to new project ideas through application of Horizon 2020 projects.

2. Describe the benefit to your CRP of being part of the EUROCORES programme (e.g. achieving critical mass of expertise, scale and scope, visibility, collaborative opportunities, ideas, etc.).

The main benefits of the EUROCORES programme is additional support for networking events which is an interesting concept providing enhancement mechanism for inter-project cooperation. CRPs itself contribute to better possibilities for work within the CRPs team. We can notice that exchange of young researchers (PhD students, post docs) and visits have increased.

Networking events provide additional conferences and workshops “forcing” together different groups possibly providing “sparks” for new cooperation. So we absolutely support networking mechanisms and hope similar funds, especially for the biggest joint events could be provided in future.

B.3. Cross-CRP networking, training and dissemination (max. 750 words)

1. Which networking/training/dissemination activities did you or your CRP members participate in? Indicate how many team members participated in each activity.

Kick-off meeting, Paris:

- 2 GReGAS members attended the event

EuroGIGA Minisymposia at CSASC, 25-28 September 2011. Two minisymposia organized:

- "Algebraic and topological graph theory", Organizers: Roman Nedela (Banská Bystrica), Tomasz Pisanksi (Ljubljana) - Organized by our CRP
- "Combinatorics and Graph Theory", Organizers: Michael Drmota (Vienna), Jan Kratochvil (Prague), Marc Noy (Barcelona), Oriol Serra (Barcelona)
 - 9 GReGAS members attended the event

SODO 2012 - Symmetries of Discrete Objects Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012:

- 16 GReGAS members attended the event

EuroGIGA Session in Assisi, on March 22, 2012, Assisi, Italy

- 1 GReGAS members attended the event

Eurogiga Midterm Conference, July 9-13, 2012, Prague, Czech Republic

- 13 GReGAS members attended the event

Computers in Scientific Discovery 6, August 21-25, Portorož, Slovenia

- 25 GReGAS members attended the event

CSASC Koper, 9-13 June, Koper, Slovenia

- 24 GReGAS members attended the event
- 3 out of 9 scientific minisimposia co-organised by GReGAS members

EuroGIGA Final Conference in Berlin, February 17-21, 2014

- 11 GReGAS members attended the event

EuroGIGA session at the GEMS workshop (Graph Embeddings and Maps on Surfaces), 14-19 July 2013, Smolenice, Slovakia

- 11 GReGAS members attended the event

Ljubljana-Leoben Graph Theory Seminar, 3-5 September, 2014, Koper, Slovenia

- 15 GReGAS members attended the event

2. **Networking activities.** Describe *the most important networking activity* for your CRP (in terms of impact, outcome, creation of synergy and cooperation within or outside the programme).

We believe that the most important networking activity was Conference of the Catalan, Slovenian, Austrian, Slovak and Czech mathematical societies, 9-13 June, Koper

- Traditional conference organized every two years
- 24 GReGAS members attended the event and members of all other EUROGIGA projects attended the conference as well
- <http://csasc2013.upr.si/>
- 9 scientific, 1 educational and 1 EUROGIGA minisimposia

- 108+ participants

3. **Training activities.** Describe *the most useful training activity* to date (workshop, course, school, etc.) undertaken by senior or junior researchers of your CRP.

- Within SODO 2012 a Magma workshop was organized.
- Two-week Summer school, "Topics in Algebraic graph theory" (Banska Bystrica, Slovakia).
- PhD Summer School in Discrete Mathematics and Symmetries of Graphs and Networks III (Rogla, Slovenia)
- PhD Summer School in Discrete Mathematics, Rogla, Slovenia / 16 - 21 June 2013
- 2014 PhD Summer School in Discrete Mathematics, Rogla, Slovenia / 29 June - 5 July 2014

4. **Dissemination activities.** Describe *the most valuable dissemination activity (or activities)* your team undertook, with respect to (i) the scientific community and (ii) the wider public. Describe the outcome and impact of these activities in terms of promoting your field of research and the EUROCORES programme.

Organisation or co-organisation of events:

- 7th Slovenian International Conference on Graph Theory, Bled, Slovenia, 19 – 25 June 2011
- Meeting "Mathematics and Art", Ljubljana, Slovenija, junij, 2011
- Annual meeting of International academy for mathematical chemistry, Bled, Slovenija, junij 2011
- CSASC 2011, Krems Austria, T. Pisanski, R. Nedela chairing "Algebraic and topological graph theory" session. Also organization of EUROGIGA session.
- SODO 2012, Symmetries of Discrete Objects, Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012
- Computers in Scientific Discovery (CSD) conference: CSD6 August 2012, Portorož, SI. This meeting had participants from chemistry, mathematics & computer science, with a strong representation from GREGAS researchers, and invited speakers included Nobel Laureate Sir Harold Kroto, whose seminal work on fullerenes is central to our theme of using graph theoretical ideas in chemical applications.
- Joint Mathematical Conference CSASC 2013, 9.-13. 6. 2013 in Koper, Slovenia.
- Graph Embeddings and Maps on Surfaces, GEMS 2014, Smolenice, Slovakia, 14.-19. 7. 2013 (organizers: Nedela, Škoviera, member of program committee: Širan, organization: Mačaj, Karabaš, Kotrbčík; Širan, Škoviera are the editors of the special issue of Ars Mathematica Contemporanea)
- 7th Czech-Slovak International Symposium on Graph Theory, Combinatorics, Algorithms and Applications, organized in Košice, 7-13.7. 2013 (Nedela, Škoviera – members of program committee; Škoviera – editor of special issue of Discrete Mathematics)
- EuroComb 2013, Pisa, Italy, 9.-13. 9. 2013, program committee member: Škoviera
- 7th Cracow Conference on Graph Theory "Rytro '14", partnered through the Standard Grant of the Visegrad Fund: Škoviera
- 6th International Workshop on Optimal Network Topologies IWONT 2014, 30. 6. -4. 7. 2014, Bratislava, Slovakia, main organizers: Jajcay and Širan
- Working retreat of the research team, 10.12.-14.12. 2014, MosonmagyarÓvr, Hungary. Organizer: Škoviera
- Adriatic Conference on Graph Theory and Complexity, Split, Croatia, 25-27 April 2014.
- ATCAGC 2013: Algebraic, Topological and Complexity Aspects of Graph Covers, Bovec, Slovenia / 28 January - 1 February 2013
- DM | =60: |DM| =60 International Conference on Graph Theory and Combinatorics, dedicated to Prof. Dragan Marušič's 60th Birthday, Koper, Slovenia / 1 - 3 May 2013
- Joint Workshop of Math Departments UP IAM and UP FAMNIT, Rogla, Slovenia / 17 - 19 May 2013
- Conference on Geometry: Theory and Applications, Ljubljana, Slovenia / 24 - 28 June 2013
- 2nd Annual Mississippi Discrete Mathematics Workshop, Starkville, USA / 2 November 2013

- SYGN IV: Symmetries of Graphs and Networks IV, Rogla, Slovenia / 29 June - 5 July 2014

Associate partners

- Royal Society Workshop: Symmetry, Rigidity & Periodicity in Natural & Engineered Structures, Chicheley Hall, Feb. 2012 (P. W. Fowler, initiator and co-organizer)
- Aromaticity, International Conference on Physical Organic Chemistry (ICPOC21), Durham Sept, 2012 (P. W. Fowler, co-organizer)

5. List the cross-CRP activities your CRP organised or co-organised.

EuroGIGA Minisymposia at CSASC, 25-28 September 2011. GReGAS PL Pisanski and PI Nedela organized one of two EuroGIGA minisymposia:

- "Algebraic and topological graph theory", Organizers: Roman Nedela (Banská Bystrica), Tomasz Pisanksi (Ljubljana) - Organized by our CRP
- "Combinatorics and Graph Theory", Organizers: Michael Drmota (Vienna), Jan Kratochvíl (Prague), Marc Noy (Barcelona), Oriol Serra (Barcelona)
- 43 participants.
- Organizers: GReGAS + GraDR
- web: <http://www.dmg.tuwien.ac.at/OMG/OMG-Tagung/>

SODO 2012 - Symmetries of Discrete Objects Conference and MAGMA Workshop, Queenstown, New Zealand, 13-17 February 2012:

- 67 Participants.
- Organizers: GReGAS + GraDR
- web: <http://www.math.auckland.ac.nz/~conder/SODO-2012/>

Computers in Scientific Discovery 6, August 21-25, Portorož, Slovenia

- Scientific committee: Tomaž Pisanski (chair), Patrick Fowler, Klavdija Kutnar.
- Organizing committee: Klavdija Kutnar (chair), Boštjan Frelih, Ademir Hujdurović, Alen
- Organizers: GReGAS + ComPose

CSASC Koper, 9-13 June, Koper, Slovenia

- T. Pisanski, J. Kratochvíl, R. Nedela – members of national scientific committees
- Organizing committee: K. Kutnar, A. Orbanić, T. Pisanski, J. Prezelj
- 3 out of 9 minisimposia coorganized by GReGAS members
- Eurogiga minisymposium held
- Organized by all EUROGIGA projects

GEMS workshop (Graph Embeddings and Maps on Surfaces), 14-19 July 2013, Smolenice, Slovakia

- main organizers: Nedela, Škoviera, in cooperation with GraDR
- GReGAS members of program committee: Širan,
- organization: Mačaj, Karabaš, Kotrbčík

Ljubljana-Leoben Graph Theory Seminar, 3-5 September, 2014, Koper, Slovenia

- GReGAS members of scientific committee: Imrich W., Klavžar S., Kutnar K., Pisanski T.
- GReGAS members of organizing committee: Brešar B., Jakovac M., Kelenc A., Milanič M.

B.4. Publications, dissemination and outreach

Important: In your lists, include only those publications which resulted to a significant extent from work undertaken in the framework of the CRP or from collaboration with other CRPs. Note that all such publications should bear an acknowledgement of the EuroGIGA programme.

In addition:

- List **all** authors.
- Identify with an asterisk (*) publications which acknowledge the EUROCORES programme.
- Underline publications/presentations involving co-authors from at least two IPs within your CRP.
- **Mark in bold** publications/presentations involving co-authors from other CRPs in the programme.

Publications

- Articles

Peer-reviewed articles in journals (published, in press or submitted)

Conference on Operational Research, Vilnius (Lithuania), July 8-11, 2012.

Martin Milanič, Uniqueness of independence polynomials in monogenic graph classes, International Colloquium on Graphs and Optimization 2012, Leukerbad, Switzerland, August 13-17, 2012.

7th Slovenian International Conference on Graph Theory 19-25 June 2011, Bled, Slovenia

- Martin Skoviera: Snarks - Recent development (keynote lecture)
- Ján Karabáš: Classification of Edge-transitive Maps Michal Kotrbčík: High-genus Embeddings
- Martin Mačaj: Nonorientable Regular Maps Over Linear Fractional Groups
- Roman Nedela: Asymptotic Enumeration of Reversible Maps Regardless of Genus

23rd British Combinatorial Conference University of Exeter, 4-8 July, 2011.

- Jozef Širáň, Nonorientable regular maps of any given type over linear fractional groups

IWONT 2011 International Workshop on Optimal Network Topologies Brussels, Belgium, July 11 - 15, 2011

- Jana Siagiova: Cayley graphs in the degree-diameter problem (keynote lecture)
- Martin Knor: On 3-arc graphs
- Martin Macaj: Search for properties of the missing Moore graph
- Maria Zdimalova: A family of large vertex-transitive graphs of diameter 2

Group Actions on Combinatorial Structures Beijing, August 21-27, 2011

- Martin Skoviera Regular maps with nilpotent automorphism groups
- Ján Karabáš: Discrete groups of automorphisms of orientable surfaces
- Roman Nedela: Discrete groups of automorphisms of surfaces with given genus
- Jozef Siran: External symmetries of regular maps

Workshop on Symmetry in Graphs, Maps, and Polytopes Fields Institute Toronto, October 24-27, 2011

- Martin Skoviera: Regular maps with nilpotent automorphism groups
- Jan Karabas: Classification of edge-transitive maps
- Martin Macaj: Nonorientable Regular Maps and Residual Finiteness of Triangle Groups
- Roman Nedela: Vertex Transitive and Edge Transitive Polytopes and 2-Dimensional Orbifolds
- Jozef Siran: External Symmetries of Regular and Orientably Regular Maps

AMS Special Session on Topological Graph Theory, Structure and Symmetry, Boston, January 4-7, 2012

- Martin Skoviera: Locally Maximal Embeddings of Graphs in Orientable Surfaces (invited lecture)
- Roman Nedela: A recent progress in map enumerations (invited lecture)
- Roman Nedela: Vertex transitive polyhedral maps and actions of discrete groups on surfaces (invited lecture)

ATCAGC 2012 Workshop on Algebraic, Topological and Complexity Aspects of Graph Covers 26th - 31st January 2012, Eugene, Oregon

- Roman Nedela: Flows and graph coverings

SODO 2012 Symmetries of Discrete Objects Conference and MAGMA Workshop Queenstown, New Zealand, 12-17 February 2012

- Jan Karabas: Discrete group actions on orientable surfaces
- Martin Macaj: On the Wilson operators
- Jozef Siran: Imprimitivity of locally finite, 1-ended, planar graphs

Eurogiga Midterm Conference Prague, July 9-13, 2012

- Martin Skoviera: Regular maps with nilpotent automorphism groups (invited lecture)

IWONT 2012 The 5th International Workshop on Optimal Network Topologies July 27 – 29, 2012 Institut Teknologi Bandung, Indonesia

- Jozef Siran: A survey of algebraic methods in the degree-diameter problem (keynote lecture)
- Martin Knor: Graphs with given degree and diameter on the smallest number of vertices

- Jana Siagiova: Quotients of large vertex-transitive and Cayley graphs of given degree and diameter

ACCOTA 2012 International Workshop Combinatorial and Computational Aspects of Optimization, Topology and Algebra December 3 to 7, 2012. Huatulco, Oaxaca, México

- Martin Skoviera: Odd decompositions of regular eulerian graphs of odd orders
- Jozef Siran: Algebraic methods in the degree-diameter problem

Balakrishnan, R. and Bapat, R. B. and Klavžar, Sandi and, Preface [Recent trends in graph theory and combinatorics]. Discrete Math. 312 (2012), 1493. <http://dx.doi.org/10.1016/j.disc.2011.12.025> (Introduction)

Bratislava Graph Theory Seminar (Regular seminar on graph theory and combinatorics)
Head of the seminar: Martin Skoviera Weekly (during the semester) at Comenius University, Bratislava Slovakia

Seminar for Discrete Mathematics, Institute of Mathematics, Physics and Mechanics, Ljubljana. Head of the seminar: Tomaž Pisanski.

Annual meeting of the slovak part of the GReGAS team. December 5 to 12 2011 and December 11 to 15 2012
Mosonmagyarovar, Hungary

AGT in BB Algebraic Graph Theory in Banska Bystrica, August/September 2012, Matej Bel University, Banska Bystrica Slovakia

- Programme Committee: Mikhail Klin, Roman Nedela and Martin Macaj (all members of GReGAS)
- Organizing Committee: Martin Macaj, Jan Karabas (both GReGAS) and Stefan Gyurki

In addition, Slovenian PL and PI teams achieved the following:

- Organization of the conference Computers in Scientific Discovery with a plenary speaker, prof. Harold Kroto, nobel laureate (discovery of C₆₀ fulleren)
- proj. member prof. Konvalinka received award of University of Ljubljana given to best teachers.
- A project financed by Picker Institute (USA, Colgate University) continued into the 2nd year as the results for the first year were very good.

Section B - EuroGIGA Report

- Pisanski appointed to the Publications Committee of European Mathematical Society.
- PI prof. Marusic was elected as rector of the University of Primorska.
- project member prof. Miklavic received national award for science (Zois prize).
- V. Batagelj has received INSNA's William D. Richards Jr., Software Award (2013) for Pajek software

Unpublished lecture: Leydold, Josef. 2012. Sign patterns of graph laplacian eigenvectors. Istanbul Discrete Mathematics Meetings, Istanbul, 27.04.

Bratislava Graph Theory seminar (lead by Prof. M. Škoviera),
<http://new.dcs.fmph.uniba.sk/index.php/Seminare/SeminarZTeorieGrafov>

Regular seminar in Banska Bystrica: "Aká si mi krasna" (lead by doc. M. Haviar),
<http://www.akasimikrasna.sk>

R. Nedela: Why mathematicians compute maps? MIST conference, Kčeak, 7.-12. 1. 2013.

J. Širan: Fruits of ploughing fields along elliptic curves, MIST conference, Klak, 7.-12. 1. 2013.

Public outreach

- Press releases

/

- National / international newspaper articles (presenting your CRP or part of your work)

Article related to the conference and EUROGIGA networking event and especially about nobelist Sir Harald Kroto visiting Slovenia having talk at CSD 6 conference.

- <http://www.dnevnik.si/magazin/znanost-in-tehnologija/1042548265>

- Abelium team:
 - in 2012 won Slovenian innovation award for the most innovative service iOliva (geometric graph theory application)

Section B - EuroGIGA Report

- in 2013 won Slovenian innovation award for the most innovative business model (use of graph theory and optimization in logistics for cooperation in GoOpti solution: Abelium team and TMVista company)
- In 2014, finalist of the Cloud Innovation World Cup (one of the four finalists for Allianz Evolve Award, Abelium & TM Vista)
- In 2014 winner of Eurocloud Europe Award for the cloud solution with the best business impact (GoOpti solution, Abelium & TMVista)

B.5. Feedback on the EUROCORES programme and EUROCORES scheme (up to 300 words)

/

Section C. Self-assessment and follow-up

C.1. Overall self assessment on the accomplishments of the CRP (up to 600 words)

Initially not all PI members of the project were approved by their respective countries, among them J. Leydold from Austria and D. Leemans from Belgium. Professor Leydold then continued to work as a member of the PI Stadler, while D. Leemans moved to New Zealand and continued cooperation through the team of AP Conder. Thus, even without all the Pis from the initial application, the work on the project started successfully. After that the project was carried out according to the plan in the application without any major deviations. For a brief period there was unclear situation in regard to financing of PI Biyikoglu, which was eventually resolved. Funding was temporarily stopped or reduced due to government budget cuts addressing the economic crisis in Croatia and Slovenia. Financing issues made the work on the project harder but did not have a major impact on the course of the project.

Beside the topics stated in the application the course of the research has even extended, especially in the part of applications in chemistry, bioinformatics and large networks.

The reporting related to the project was carried out on national levels according to the reporting obligations of the respective national research agencies. We have successfully submitted the midterm report to ESF and received a positive feedback.

The CRP contributed significantly in strengthening research and cooperation ties, which were built in the past through series of periodic conferences and workshops, existing personal collaboration and common scientific journal *Ars Mathematica Contemporanea*. After the start of indexing by SCIE in 2011, the journal grew stronger and in 2015 we plan to double the number of issues per year (4 instead of 2). The work in CRP contributed significantly towards this achievement.

The teams of Slovenian PIs involved cooperation of all three major universities in Slovenia and also a research oriented company Abelium, which is kind of a spin-off from the two universities (University of Ljubljana, University of Primorska). Thus the research and development received the motivation from industry especially related to applications of large networks in logistics.

The project offered a strong funding support for the groups involved, which could in this way continue and expand their scientific work. During this period all groups have supported several young scientists, some of them very progressive ones.

C.2. Follow-up activities emerged as a result of the CRP and the programme (up to 300 words)

New applications of graph representations in chemistry and synthetic biology were identified. An application to the ERASynBio1 call was sent and a project BioOrigami was approved, starting in 2015, includes PI Pisanski. PI Pisanski and PI Klavžar become involved in research in applications of graph and representation theory in synthetic biology. Several papers were published already.

The journal established by the groups involved in the CRP, *Ars Mathematica Contemporanea*, grew stronger and in 2015 we plan to double the number of issues per year from 2 to 4.

The work on evolution in networks opened new research directions, especially considering the motivation from the "Big-data" industry. New initiative related to formalization and software development, similar to the one of Pajek from the 90s, have started in 2014. As a result of this, two new prototype software libraries, TQ and Ianus were developed and the ideas presented on relevant international conferences.

We have started to work on graph modelling of multi party off-the-record communication with Berkant Ustaoglu (Izmir Institute of Technology). Based on the results of the CRP, proposal for the prestigious TUBITAK 1003 - Primary Subjects R&D Funding Program was submitted and is currently pending in the second round.

De novo Peptide Sequencing is an important problem in computational mass spectrometry based proteomics. In cooperation with Jens Allmer Bioinformatics group Izmir Institute of Technology we have efficiently solved de novo sequencing problem with a new novel linear time algorithm as a result of this CRP. Jens Allmer has a start-up company funded by TUBITAK. Our results have shown a huge economical potential and also potential for future research funding.

Bilateral project Slovenia-Croatia has been established, with the leaders Damir Vukičević and Dragan Stevanović. "Adriatic Conference on Graph Theory and Complexity" was held for the first time (in Split, Croatia, April 2014.).

C.3. Forward looking perspectives enabled by the programme (up to 300 words)

During the time of the duration of the CRP, the general R&D focus in EU have changed significantly and positively - problems from the real-world, industry and business are becoming increasingly important motivator for R&D. Consequently, the research is becoming more and more multidisciplinary. This move is clearly seen in the orientation of the Horizon 2020 calls and work programmes.

We are glad that this has reflected within our CRP as well, since our research became increasingly more motivated toward R&D and applications in synthetic biology, chemistry, bioinformatics, Big-data, data science and logistics. This expansion from basic research towards interdisciplinary collaboration and applications, while still keeping strong "basic" component, opens up opportunities for involving mathematicians in Horizon 2020 projects and similar. For mathematicians it is often difficult to involve into EU projects like the ones of FP6 and FP7. The kind of projects like EUROGiga are important initiatives, which together with multidisciplinarity pressure from the Horizon's 2020 side, opens up the space for involving mathematicians into R&D possibly having much bigger socio-economic impact. So we strongly support future initiatives similar to EUROCORES/EUROGiga.

Povzetek: Klasifikacija predstavlja pomebno temo v bibliometriji in scientometriji. Želimo si zanesljivih in doslednih orodij ter rezultatov. Takšni cilji zahtevajo dobro opredeljen sistem razvrščanja po osnovnem predmetu, ki ustrezno odraža znanstvena področja. V širšem naboru tehnik razvrščanja so metode za razvrščanje (ang. cluster analysis) ene izmed najbolj uspešnih metod. Dva algoritma za razvrščanje, ki temeljita na modularnosti - metodi VOS in Louvain - sta predstavljeni z namenom posodobitve in optimizacije razvrstitev na platformi SCImago Journal & Country Rank (SJR). Uporabili smo orodje za analizo in vizualizacijo omrežij Pajek in zagnali oba algoritma na omrežju z več kot 18.000 revij v SJR, ki združuje tri mere za neposredno citiranje, sosklic in sklicno sklopljenost. Množica tako pridobljenih skupin je bila poimenovana po kategorijah oznak, dodeljenih revijam v SJR in po pomembnih besedah iz naslovov revij. Kljub temu, da rezultata obeh algoritmov odražata majhne razlike, rezultati kažejo podobno obnašanje pri združevanju revij. Zato predstavljlata ustrezni rešitvi za namene razvrščanja. Na novo ustvarjeni klasifikaciji temelječi na dveh algoritmih smo primerjali z drugimi bibliografskimi sistemi razvrščanja, vključno z originalnimi predmetnimi kategorijami v SJR in WoS, da bi preverili njihovo skladnost, ustreznost in natančnost. Poleg nekaterih pomembnih razlik, smo identificirali določeno povezanost in homogenost med štirimi analiziranimi sistemi za klasifikacijo.
