## UVOD

---

Že ob ustanovitvi Onkološkega inštituta Ljubljana (OIL) leta 1938 je bila v ločeni delovni enoti vzpostavljena tudi služba Zdravstvena evidenca in statistika, ki je poleg druge statistike za potrebe kliničnih raziskav inštituta zbirala tudi podatke o bolnikih z rakom. Ko je bil leta 1950 na OIL ustanovljen državni populacijski register raka, je statistična služba prevzela tudi vse naloge povezane z zakonsko obveznim poročanjem v Register raka Republike Slovenije. Osnovan je bil Bolnišnični register Onkološkega inštituta Ljubljana (BR), ki danes deluje v okviru službe Epidemiologija in register raka in zbira ter državnemu registru posreduje podatke o novih bolnikih, ki pridejo na OIL zaradi diagnostike in zdravljenja. OIL je tako edina bolnišnica v državi, ki ima za zakonsko predpisano poročanje v državni register raka zaposlene posebej izšolane medicinske sestre in izpolnjevanja prijav ne prepušča zdravnikom. Popolni in kakovostni podatki obravnavanih bolnikov na OIL so tako državnemu registru na voljo za približno polovico vseh zbolelih za rakom v Sloveniji, BR pa prispeva v državni register tretjino vseh prijav (približno 6500 letno).

Podatki, zbrani v BR, so dragoceni tudi za strokovno in raziskovalno delo inštituta. Predstavljajo izhodišče za večino kliničnih in epidemioloških raziskav, ki potekajo na OIL. Ključni so tudi pri pripravi pregledov o številu in vrsti diagnostičnih in zdravstvenih posegov, opravljenih na OIL, ki jih spremlja državni program obvladovanja raka. Standardizirano poročilo o številu in značilnostih bolnikov, vrsti bolezni ter načinu diagnostike in zdravljenja, ki so bili na OIL obravnavani v določenem letu, seznanja vodstvo, zdravnike in druge strokovne sodelavce OIL s podatki, obdelanimi v BR. Po zgledu poročil Registra raka RS letno izdajamo obdelane podatke BR v obliki standardiziranih prikazov. Tokratno poročilo prikazuje podatke za leto 2016. Grafični prikazi časovnih sprememb osnovnih kazalnikov za združene inštitutske podatke ter za podatke razdeljene po enajstih multidisciplinarnih strokovnih timih, ki smo jih prvič prikazali v prejšnjem poročilu, postajajo stalnica poročil BR. V tem poročilu so prikazani časovni trendi v zadnjih šestih letih, v obdobju 2011–2016. Poročilo smo obogatili še s prikazom podatkov za leto 2016 o najpogostejših lokacijah raka in njihovem odstotnem deležu po spolu in starosti.

## ***VIRI PODATKOV IN METODE REGISTRACIJE***

---

Osnovni vir podatkov o boleznih in zdravljenju so zapisi obravnav, ki so dostopni v informacijskem sistemu OIL - WebDoctor. V BR zaposleni diplomirani medicinski sestri s specialnimi znanji (koderki) Maruška Ferjančič in Polona Škulj na podlagi seznamov novih bolnikov, ki jih obravnava OIL, sprotno pregledujeta njihovo dokumentacijo in podatke vnašata v skupen informacijski sistem Bolnišničnega registra in Registra raka RS. Beležita podatke o vrsti bolezni (anatomsko mesto raka, histološka oz. citološka diagnoza, stadij) in o vrsti zdravljenja. Informacijski sistem, ki ga uporablja BR, je s posebej varovano spletno tehnologijo neposredno povezan s Centralnim registrom prebivalstva, kjer se preverijo vsi bolnikovi osebni podatki ter stalni naslov ob ugotovitvi bolezni, kar je pomembno za zagotavljanje kvalitete podatkov (na primer, da se bolniki v sistemu ne podvajajo), dnevno pa se posodablja tudi bolnikovo vitalno stanje.

V incidenco BR so za posamezno leto vključeni vsi bolniki obravnavani na OIL - v nasprotju s pravili državnega registra raka so vključeni tudi tujci, ki v Sloveniji nimajo stalnega prebivališča. Prav tako se od državnega v bolnišničnem registru razlikuje definicija incidence – incidenčno leto je leto, v katerem je bil za dano bolezen bolnik prvič sprejet na OIL ne glede na to, kdaj je bil rak odkrit. V incidenco OIL ne štejemo ponovnih obravnav bolnikov zaradi progresov, recidivov ter novih primarnih rakov parnega organa iste lokacije, če je bila histološka vrsta obeh rakov, npr. leve in desne dojke, enaka. Prav tako v incidenco ne štejemo novega pojava raka iste histološke vrste na istem organu, npr. multiple lezije v debelem črevesu. Bolezen opredelimo na osnovi ugotovitev katere koli zapisane preiskave – od popisa operacije do obdukcije, če bolnik poprej ni bil zdravljen. V primeru več preiskav pa izberemo najbolj zanesljivo.

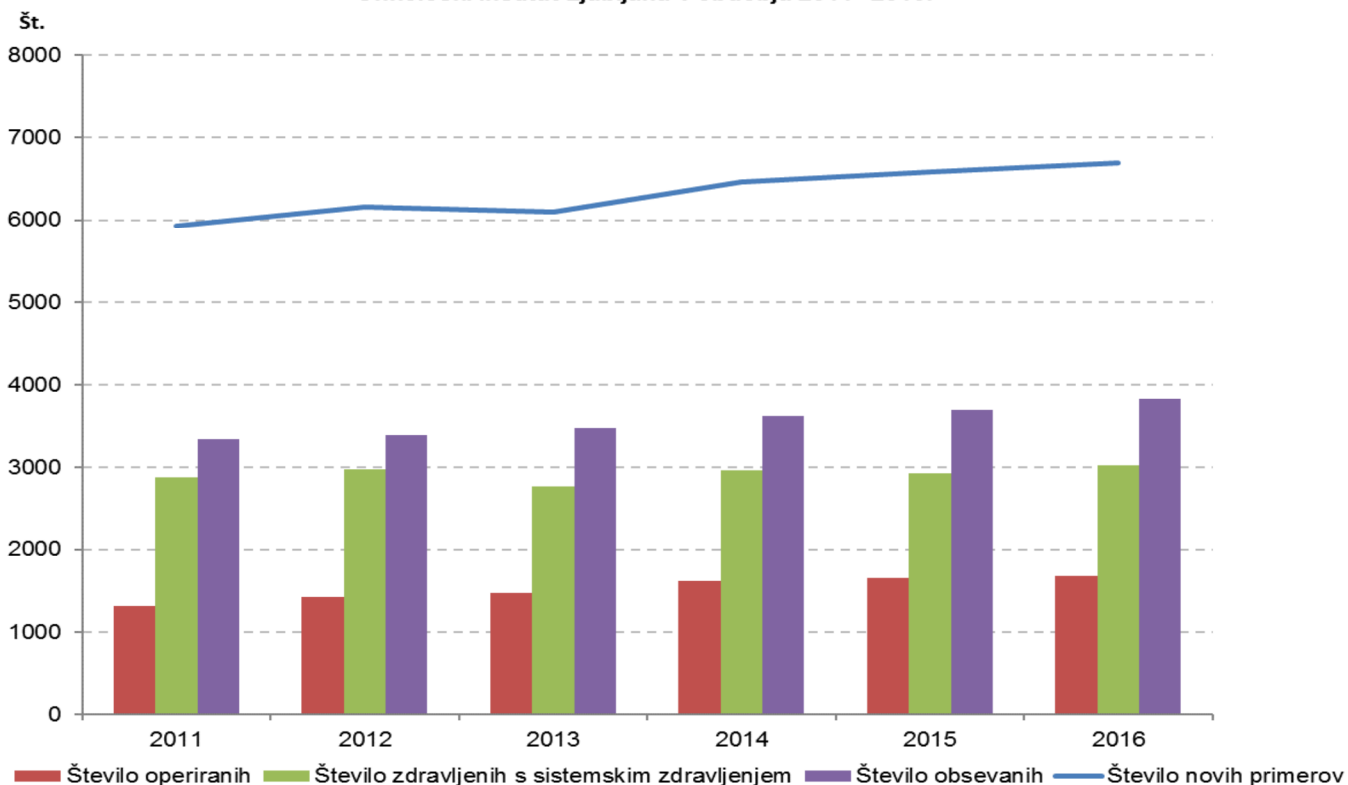

Podatki iz medicinske dokumentacije se v informacijski sistem prenašajo v strukturirani obliki, kodirani v skladu z mednarodnimi in v državnem registru raka dogovorjenimi pravili. Za razvrščanje neoplazem po primarni lokaciji je od leta 1997 v veljavi deseta revizija Mednarodne klasifikacije bolezni in sorodnih zdravstvenih problemov za statistične namene (MKB-10). Pri uvrščanju med maligne bolezni je treba opozoriti še na klasifikacijo morfologije neoplazem, za katero uporabljamo morfološki del Mednarodne klasifikacije bolezni za onkologijo, od leta 2012 njeno tretjo, leta 2011 dopolnjeno, izdajo.

Za prikaz porazdelitve bolezni po stadiju ob diagnozi v letnih poročilih uporabljamo poenostavljeno razvrščanje v eno od treh skupin: omejena bolezen, regionalno razširjena bolezen in oddaljeno razširjena bolezen. Poenostavljena opredelitev stadijev pri solidnih tumorjih praviloma sledi klasifikaciji TNM. Maligni limfomi so opredeljeni po klasifikaciji Ann-Arbor, pri ginekoloških rakih beležimo FIGO stadij, pri bolnikih z malignim melanomom pa globino invazije po Clarku in debelino po Breslowu.

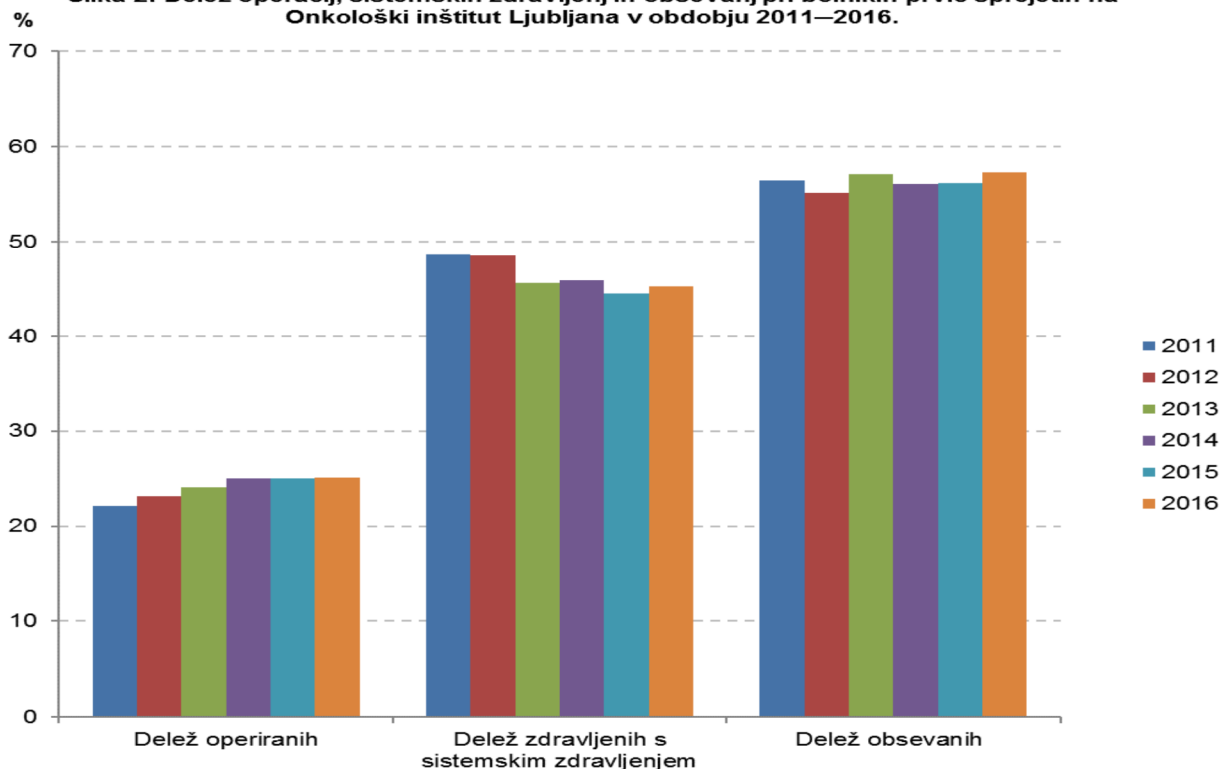

V slikah in tabelah, ki prikazujejo zdravljenja, se upoštevajo le zdravljenja, ki so bila izvedena na OIL. Za eno bolezen se šteje le eno istovrstno zdravljenje. Če je bila bolezen zdravljena z več različnimi zdravljenji (npr. operacija in radioterapija), se upošteva vsako zdravljenje posebej; vsota vseh zdravljenj je zato večja od vseh zdravljenih bolezni.

## ČASOVNI TREND ZDRAVLJENJA RAKA, ONKOLOŠKI INŠTITUT LJUBLJANA 2011–2016

Slika 1: Število operacij, sistemskih zdravljenj in obsevanj pri bolnikih prvič sprejetih na Onkološki inštitut Ljubljana v obdobju 2011–2016.

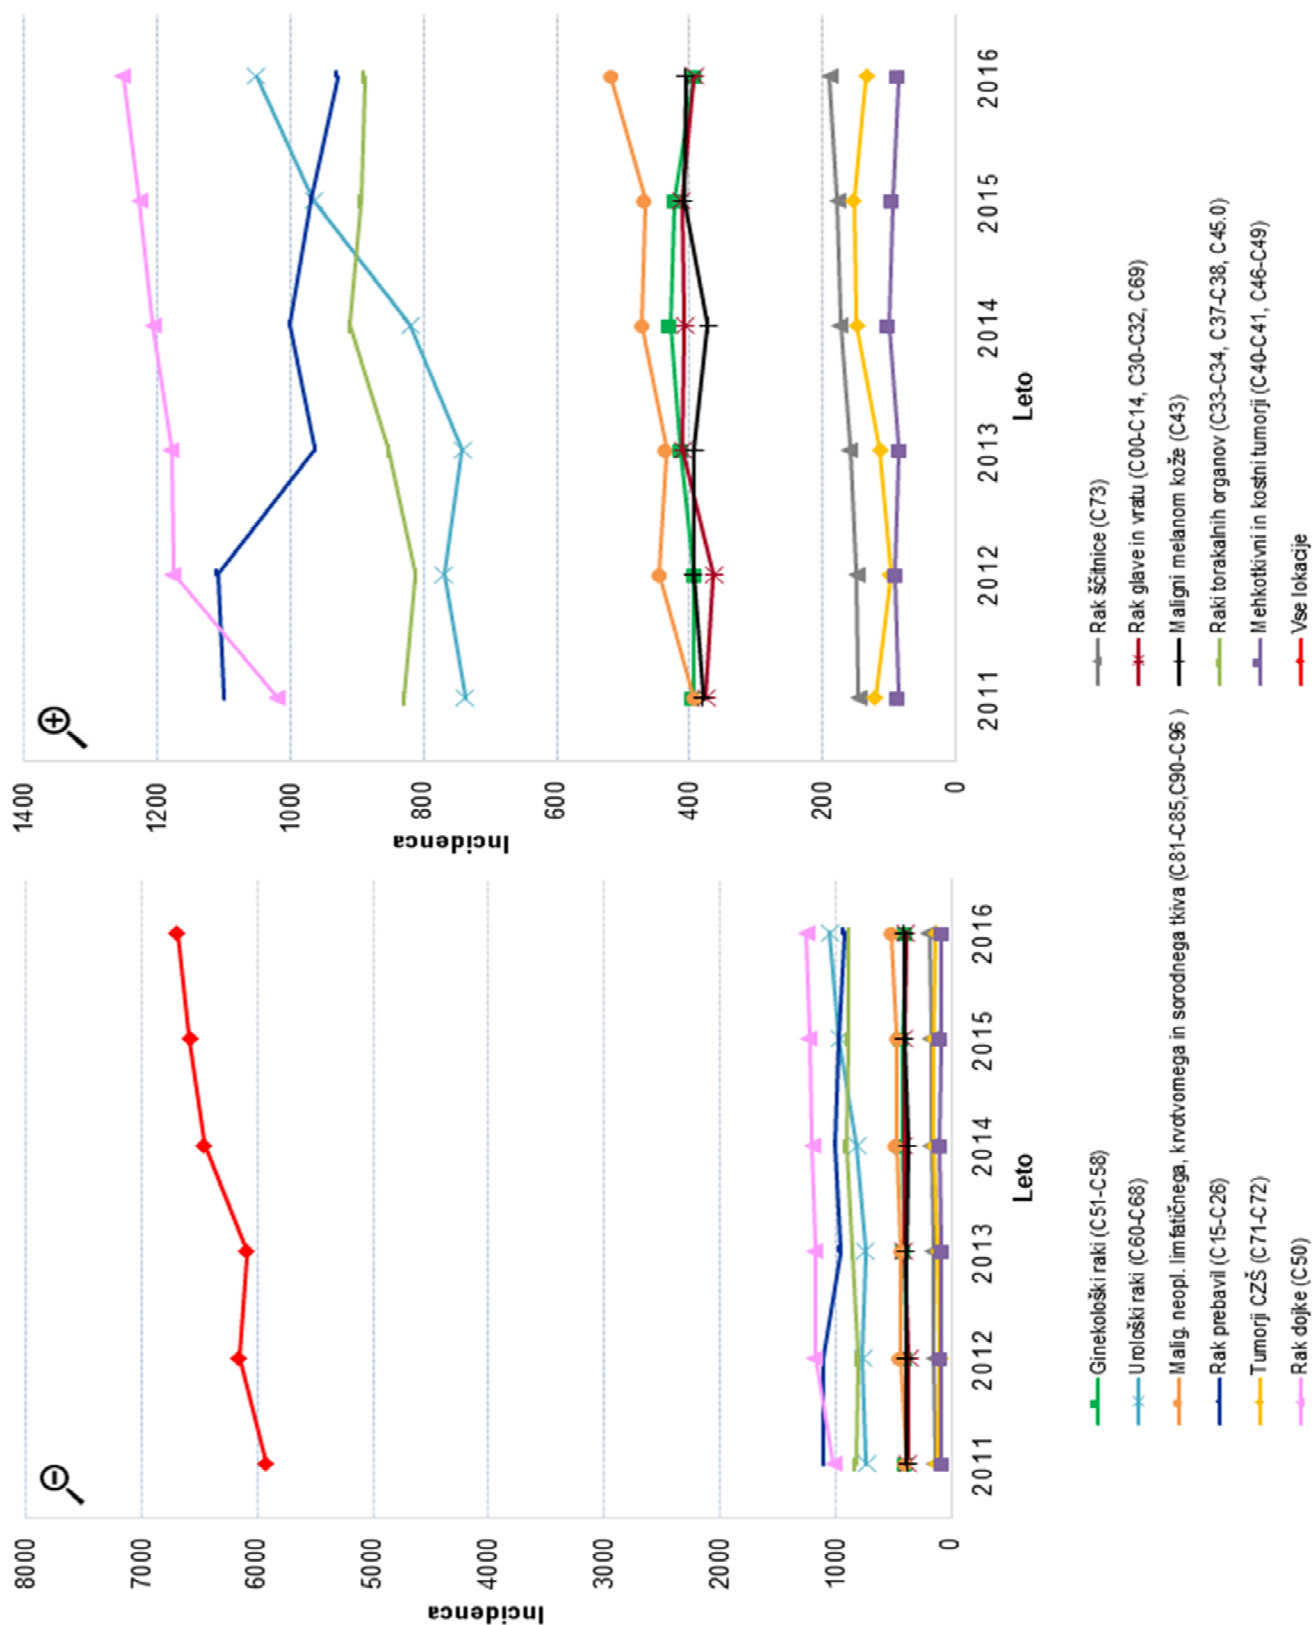

Slika 2: Delež operacij, sistemskih zdravljenj in obsevanj pri bolnikih prvič sprejetih na Onkološki inštitut Ljubljana v obdobju 2011–2016.

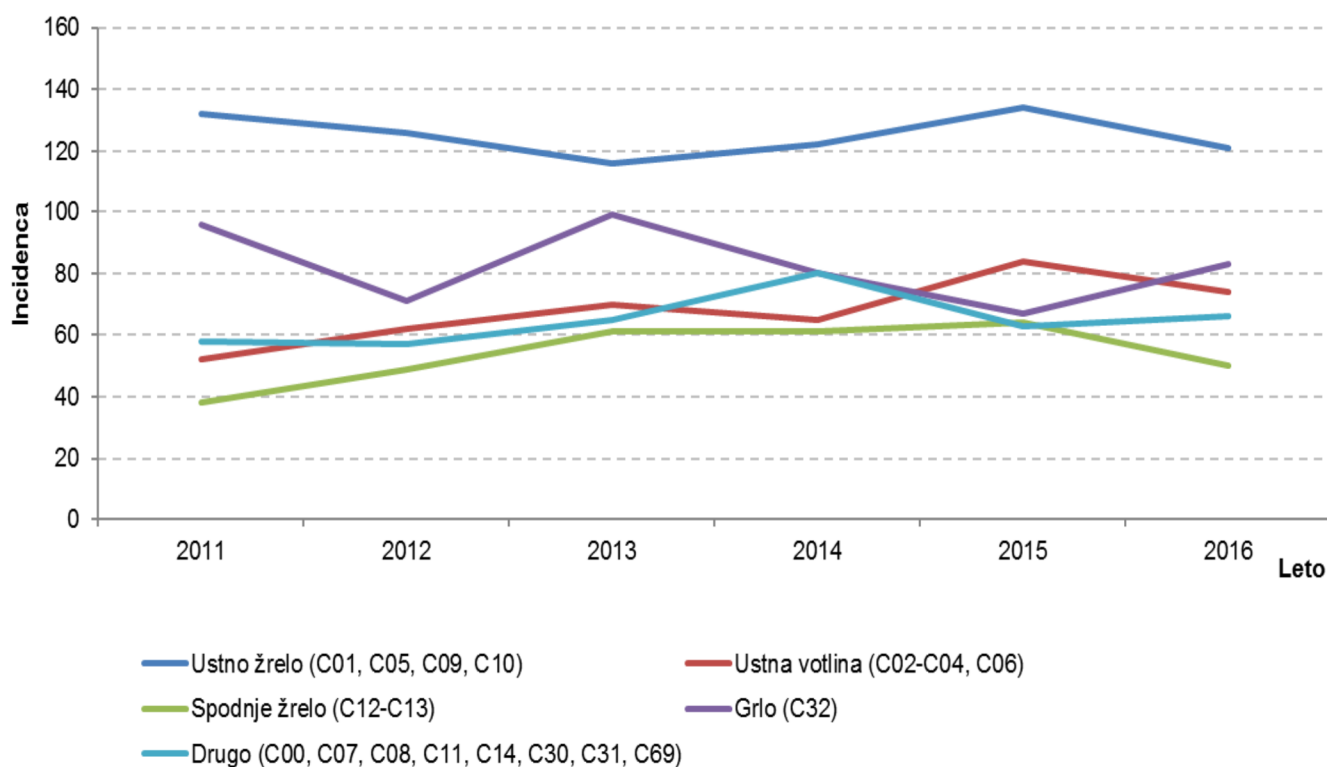

## ČASOVNI TREND INCIDENCE PO LOKACIJAH IN MULTIDISCIPLINARNIH TIMIH, ONKOLOŠKI INŠTITUT LJUBLJANA 2011–2016

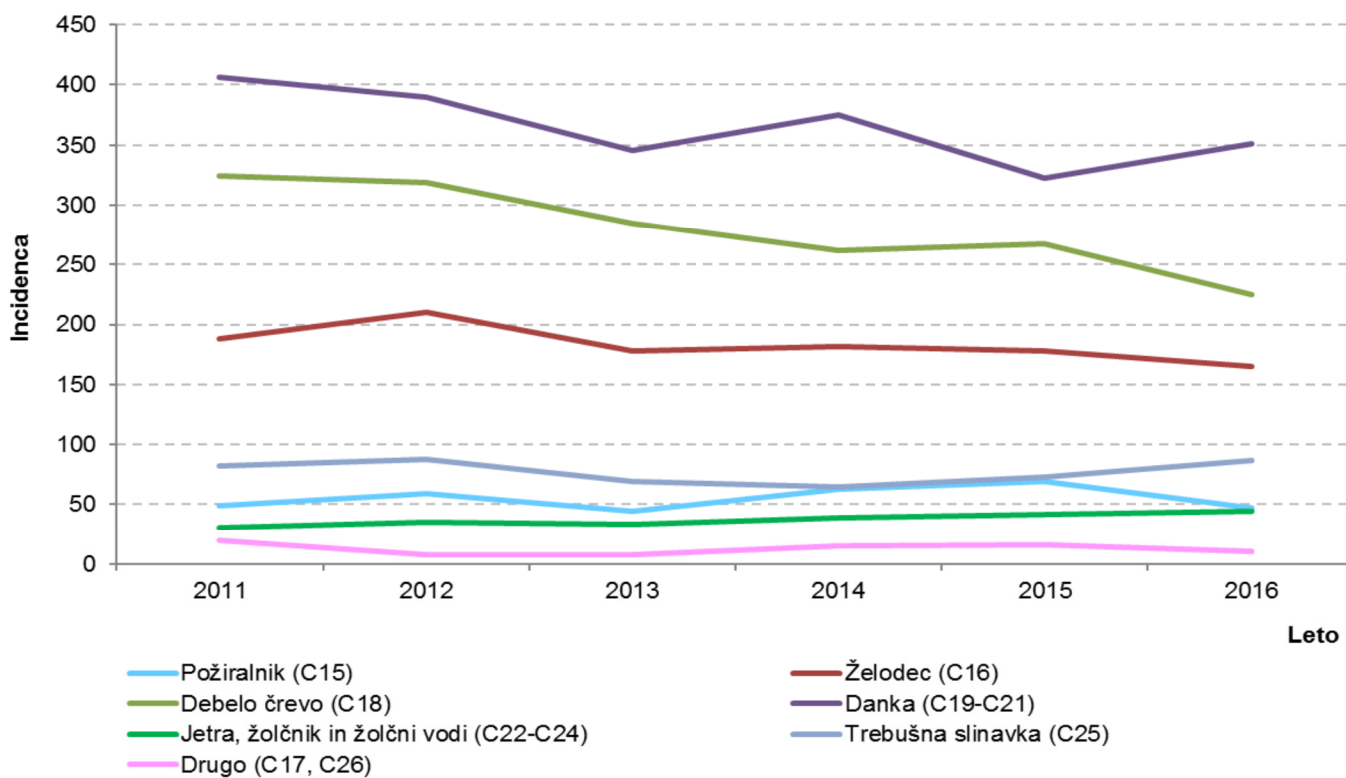

Slika 3: Incidenca izbranih skupin rakov za obdobje 2011–2016, Onkološki inštitut Ljubljana.

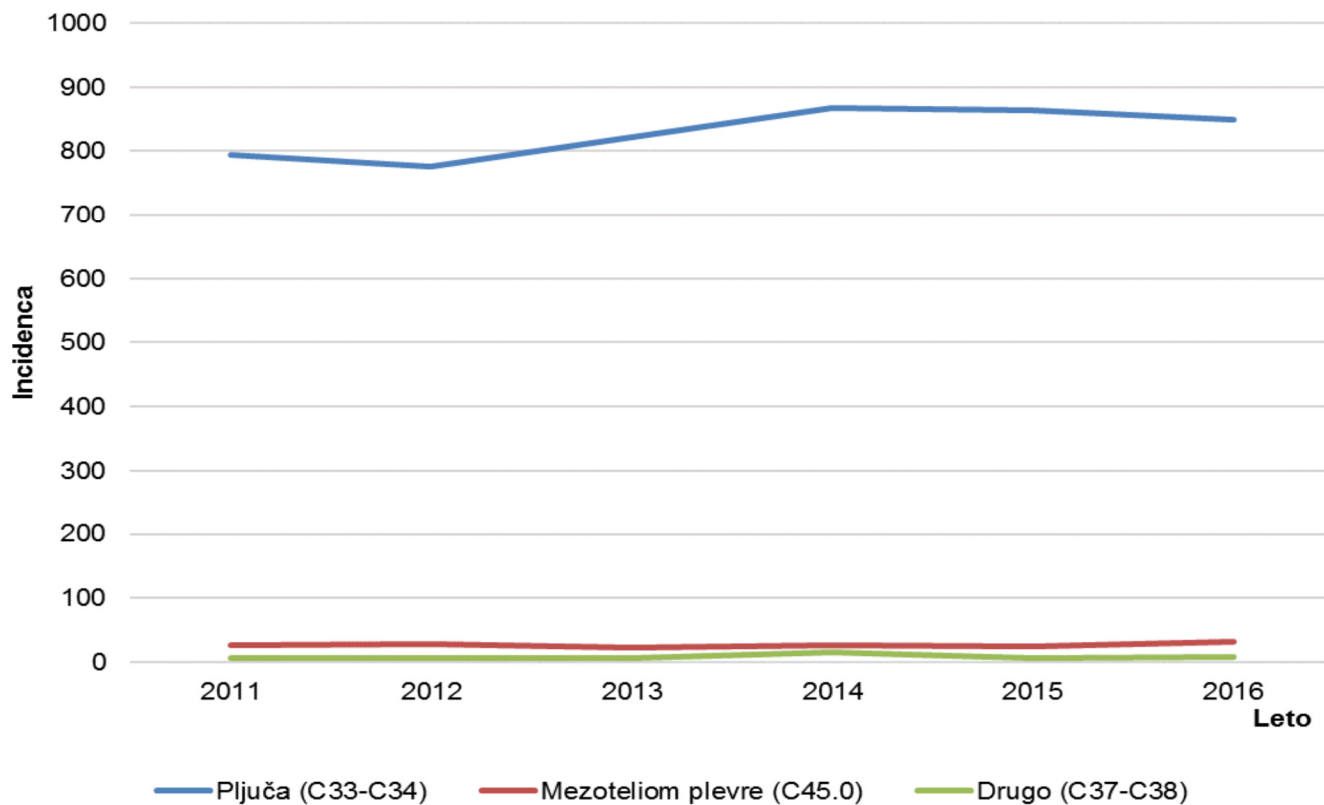

Slika 4: Incidenca rakov glave in vratu v obdobju 2011–2016,  
Onkološki inštitut Ljubljana.

\* Neupoštevano v skupnem številu: D06 – Maternični vrat, in situ (CIN III)

**Opis šifer MKB:**

C16 Želodec

C18 Debelo črevo

C19 Rektosigmoidna zveza

C20 Rektum

C34 Sapnica in pljuča

C44 Koža, razen melanoma

C50 Dojka

C53 Maternični vrat

C54 Maternično telo

C61 Prostata

D06 Maternični vrat, in situ (CIN III)

Tabela 4: Incidenca ne-Hodgkinovih limfomov po lokaciji, spolu in starosti, Onkološki inštitut Ljubljana 2016.
