On vertex-stabilizers of bipartite dual polar graphs

Štefko Miklavič

Abstract

Let X, Y denote vertices of a bipartite dual polar graph, and let G_X and G_Y denote the stabilizers of X and Y in the full automorphism group of this graph. In this paper, a description of the orbits of $G_X \cap G_Y$ in the cases when the distance between X and Y is 1 or 2, is given.

Keywords: Dual polar graphs, automorphism group, quadratic form, isotropic subspace.

Povzetek

Naj X in Y označujeta vozlišči dvodelnega dualnega polarne grafa, G_X in G_Y pa njuna stabilizatorja v grupi avtomorfizmov tega grafa. V članku so opisane orbite $G_X \cap G_Y$ v primerih ko je razdalja med X in Y enaka 1 ali 2.

Ključne besede: Dualni polarni grafi, grupa avtomorfizmov, kvadratna forma, izotropski podprostor.
