

**3 NACIONALNI RAČUNI**  
**NATIONAL ACCOUNTS**

št./No 3

**INPUT-OUTPUT TABELE, SLOVENIJA, 2001**

**INPUT-OUTPUT TABLES, SLOVENIA, 2001**

- ▶ Tabele ponudbe in porabe ter simetrična input-output tabela so del sistema input-output tabel, ki je sestavni del nacionalnih računov. V teh tabelah so podrobneje razčlenjeni račun proizvodov in storitev, račun proizvodnje ter račun oblikovanja dohodkov v sistemu nacionalnih računov.
- ▶ Supply and use tables and the symmetric input-output table are a part of the input-output system, which is an integral part of national accounts. They create a breakdown of goods and services account, production account and generation of income account in the system of national accounts.
- ▶ To so matrike, ki podrobno opisujejo domač proizvodni proces in transakcije proizvodov domačega gospodarstva. Prikazujejo strukturo proizvodnje, proizvodnih stroškov in dohodke, ustvarjene v proizvodnem procesu, tokove proizvodov in storitev, proizvedenih v okviru domačega gospodarstva, ter tokove proizvodov in storitev s tujino.
- ▶ They are matrices describing the domestic production process and transactions in products of the domestic economy in great detail. They show the structure of production, costs of production and incomes generated in the process of production, flows of goods and services produced within the domestic economy and flows of goods and services with the rest of the world.
- ▶ Izhodišče so tabele ponudbe in porabe, nato pa je iz njih izvedena simetrična input-output tabela. Tabele se uporabljajo za analitične in različne statistične namene.
- ▶ The starting point of the system are supply and use tables and from them the symmetric input-output table is derived. The tables are used for analytical and various statistical purposes.
- ▶ V tej statistični informaciji objavljamo tabele za leto 2001. Prejšnje tabele so bile izdelane za leto 2000. V skladu z metodologijo Evropskega sistema računov (ESR 1995) in zahtevami za posredovanje podatkov Eurostatu tabele sedaj izdelujemo vsako leto.
- ▶ In this issue of Rapid Reports we are publishing tables for the year 2001. Previous tables were prepared for the year 2000. According to the methodology of the European System of Accounts (ESA 1995) and to the requirements for the transmission of statistical data to Eurostat, the tables are now compiled every year.

## METODOLOŠKA POJASNILA

### NAMEN

V tej publikaciji objavljamo tabele ponudbe in porabe ter simetrično input-output tabelo za Slovenijo, ki smo jih izdelali na podlagi podatkov za leto 2001.

Objavljene tabele so del **systema input-output tabel**, ki je v Evropskem sistemu računov (ESR 1995) sestavni del sistema nacionalnih računov. Izhodišče so tabele ponudbe in porabe, ki so sestavljene na podlagi podatkov iz različnih statističnih virov. Iz njih je nato izvedena simetrična input-output tabela.

Po določilih ESR 1995 za države članice EU so te dolžne za vsako leto izdelati tabele ponudbe in porabe, za vsako peto leto pa simetrične input-output tabele. Države pa se same odločijo, ali bodo izdelovale simetrične input-output tabele tudi za vmesna leta. Rok za izdelavo tabel za posamezno leto je tri leta po preteku obdobja.

### PODATKOVNI VIRI

Za izdelavo tabel uporabljamo podatke iz naših statističnih raziskovanj in iz administrativnih virov. Uporabljamo podatke iz statističnih raziskovanj s področja kmetijstva, industrije, gradbeništva, trgovine, gostinstva, prometa in zvez, raziskovalne dejavnosti, turizma, investicij, ankete o porabi v gospodinjstvih, statističnega spremljanja cen, statistike nacionalnih računov, ekonomskih računov za kmetijstvo, podatke o uvozu in izvozu blaga iz zunanjetrgovinske statistike, podatke o zaposlenih iz statističnih raziskovanj ter iz registra delovno aktivnega prebivalstva in podatke iz poslovnega registra. Administrativni viri pa zajemajo podatke iz zaključnih računov in bilanc podjetij in drugih organizacij, podatke o vplačanih in obračunanih davkih, podatke iz napovedi za odmero dohodnine za samostojne podjetnike ter podatke iz bilanc javnega financiranja. Poleg tega uporabljamo še podatke iz plačilne bilance o uvozu in izvozu storitev.

### POJASNILA TABEL

**Tabele ponudbe in porabe ter simetrične input-output tabele** so matrike, ki podrobno opisujejo domač proizvodni proces in transakcije proizvodov domačega gospodarstva. Pomenijo podrobnejšo razdelitev računa proizvodov in storitev, računa proizvodnje ter računa oblikovanja dohodkov v sistemu nacionalnih računov. Prikazujejo strukturo proizvodnje, proizvodnih stroškov in dohodke, ustvarjene v proizvodnem procesu, tokove proizvodov in storitev, proizvedenih v okviru domačega gospodarstva, ter tokove proizvodov in storitev s tujino.

**Tabela ponudbe** prikazuje ponudbo proizvodov po vrstah proizvodov in po vrstah proizvajalcev za domačo proizvodnjo, posebej pa prikazuje po vrstah proizvodov tudi uvoz. V stolpcih ima razvrščene posamezne domače proizvodne panoge ter uvoz, v vrsticah pa posamezne skupine proizvodov in storitev. Podatki so prikazani v osnovnih cenah, nato pa sledijo dodatni stolpci za prehod na kupčeve cene. Iz stolpca levega dela tabele je razvidno, kolikšna vrednost posameznih proizvodov je proizvedla določena panoga ter kolikšna je skupna vrednost proizvodnje te panoge. Stolpci v desnem delu tabele pa prikazujejo strukturo uvoza, marž in neto davkov po posameznih vrstah proizvodov in storitev. Na koncu je dodano povečanje uvoza za individualne nakupe, ki so jih opravili rezidenti v tujini, ter CIF/FOB prilagoditev uvoza. Končni agregati v tabeli ponudbe prikazujejo skupno vrednost domače proizvodnje, uvoza ter ponudbe v osnovnih in kupčevih cenah v celotnem gospodarstvu.

**Tabela porabe** prikazuje porabo proizvodov po vrstah proizvodov in po vrstah porabe, torej kot vmesno potrošnje (razdeljeno po panogah), končno potrošnje, bruto investicije in izvoz. Poleg tega ta tabela prikazuje elemente dodane vrednosti: sredstva za zaposlene, druge davke, zmanjšane za subvencije na proizvodnjo, potrošnje stalnega kapitala in neto poslovni presežek. Enako kot tabela ponudbe ima v stolpcih razvrščene panoge, v vrsticah pa posamezne skupine proizvodov in storitev. Tabela porabe je najprej prikazana v **cenah kupcev**. Nato pa je s pomočjo tabel neto davkov na proizvode ter marž izvedena

## METHODOLOGICAL EXPLANATIONS

### PURPOSE

In this publication we are publishing supply and use tables and the symmetric input-output table for Slovenia, elaborated on the basis of data for the year 2001.

The published tables are a part of **the input-output system**, which forms in the European System of Accounts (ESA 1995) an integral part of the system of national accounts. The starting point are supply and use tables, which are constructed on the basis of the data from different statistical sources. From them the symmetric input-output table is then derived.

The requirements in ESA 1995 for the EU Member States define compilation of yearly supply and use tables and every five years a symmetric input-output table. Member states decide on their own if they will also compile the symmetric input-output tables for the interim years. The deadline for transmission of the tables for an individual year is three years after the end of the period.

### DATA SOURCES

For the compilation of the tables we use the data from statistical surveys carried out by the Statistical Office for individual fields and from administrative sources. We use data from the statistical surveys of agriculture, manufacturing, construction, trade, hotels and restaurants, transport, research activity, tourism, investments, Household Budget Survey, statistical surveys of prices, national accounts statistics, economics accounts for agriculture, data on imports and exports of goods from external trade statistics, data on employment from statistical surveys and the Register of Employment, and data from the Business Register. Administrative sources include data from accounting statements and balance sheets of enterprises and other organisations, data on taxes, data from tax statements for non-incorporated enterprises and data from the government financial statistics. Furthermore, we have used data from the balance of payments on imports and exports of services.

### EXPLANATIONS OF TABLES

**Supply and use tables and symmetric input-output tables** are matrices describing the domestic production process and transactions in products of the domestic economy in great detail. They create a breakdown of goods and services account, production account and generation of income account in the system of national accounts. They show the structure of production, costs of production and incomes generated in the process of production, flows of goods and services produced within the domestic economy and flows of goods and services with the rest of the world.

A **supply table** shows the supply of goods and services by products and by type of producers for domestic production and distinguishing separately imports by products. In columns it has individual domestic production activities and imports, while in rows it has individual groups of goods and services. It is compiled at basic prices, followed by additional columns for the transition to purchasers' prices. From individual columns in the left part of the table it is evident what value of individual products is produced by particular industry and what is the total value of production of this industry. Columns in the right part of the table then show the structure of imports, margins and net taxes according to individual types of goods and services. In the end, the addition to imports for individual purchases of residents abroad and CIF/FOB adjustment of imports is added. Final aggregates in the supply table show total value of domestic output, imports and supply at basic and at purchasers' prices in the whole economy.

A **use table** shows the use of goods and services by type of products and by type of use, i.e. as intermediate consumption (by industries), final consumption, gross capital formation and exports. Furthermore, the table shows the components of value added: compensation of employees, other taxes less subsidies on production, consumption of fixed capital and net operating surplus. As the supply table, it has individual activities in columns and individual groups of goods and services in rows. It is compiled first at **purchasers' prices**. Then it is transformed to **basic prices** with the support of taxes less subsidies tables and margins tables.

transformacija tabele porabe v **osnovne cene**. Posamezni stolpec levega dela tabele prikazuje strukturo vmesne potrošnje določene panoge po vrstah proizvodov ter strukturo dodane vrednosti panoge. Stolpci v desnem delu tabele pa prikazujejo sestavo kategorij končne potrošnje po vrstah proizvodov in storitev. V tabeli sta dodani vrstici popravkov za nakupe rezidentov v tujini ter nakupe nerezidentov pri nas. Nakupi rezidentov v tujini so v znesku poslovnih nakupov vključeni v vmesni potrošnji, v znesku zasebnih nakupov pa povečujejo končno potrošnjo domačih gospodinjstev. Nakupi nerezidentov pri nas zmanjšujejo končno potrošnjo gospodinjstev in povečujejo izvoz. Končni agregati v tabeli porabe prikazujejo skupno vrednost proizvodnje, vmesne potrošnje, dodane vrednosti, elementov dodane vrednosti in kategorij končne potrošnje v celotnem gospodarstvu.

**Panoge, ki so** v izdelanih tabelah ponudbe in porabe prikazane v stolpcih, so definirane kot skupine podjetij, ki imajo enako glavno dejavnost. Tako so panoge nekoliko bolj raznovrstne – imajo več stranskih dejavnosti, kot če bi uporabili v ESR priporočeni pristop "enot enovrstne dejavnosti" ("KAU" - "kind of activity unit"), ta pa je v praksi težje izvedljiv. Za ta pristop smo se odločili glede na statistične vire, ki so nam bili na voljo.

Med tabelama ponudbe in porabe obstajata **dve vrsti enakosti**:

- enakost po panogah: proizvodnja panoge = poraba panoge; tako so vsote posameznih stolpcev v obeh tabelah enake;
- enakost po proizvodih: celotna ponudba proizvoda = celotna poraba proizvoda; tako so vsote posameznih vrstic v obeh tabelah enake.

**Tabela porabe uvoza** prikazuje porabo uvoženih proizvodov in storitev v posameznih panogah ter posameznih oblikah končne potrošnje. V stolpcih so razvrščene panoge, v vrsticah pa posamezne skupine proizvodov in storitev. Podatki so prikazani v vrednostih CIF, kar ustreza vrednotenju v osnovnih cenah. Za zagotovitev pravilnega skupnega vrednotenja uvoza v vrednostih FOB je dodana CIF/FOB prilagoditev.

**Tabela porabe za domačo proizvodnjo** je dobljena kot razlika med tabelo porabe v osnovnih cenah ter tabelo porabe uvoza. Prikazuje porabe posameznih vrst proizvodov in storitev, ki izvirajo iz domače proizvodnje, po posameznih panogah in oblikah končne potrošnje.

**Simetrična input-output tabela** je matrika, ki v stolpcih in vrsticah uporablja isto klasifikacijo, to je proizvod ali panoga. Bistvena razlika med tabelami ponudbe in porabe ter simetrično input-output tabelo je torej ta, da prve povezujejo proizvode s panogami, slednja pa proizvode s proizvodi ali panoge s panogami. Izdelamo lahko torej dve vrsti simetričnih input-output tabel: oblike proizvod-proizvod ali panoga-panoga. V ESR 95 in v input-output analizi ima primarno vlogo input-output tabela **oblike proizvod-proizvod**, ki prikazuje bolj homogene tokove in smo jo izdelali tudi mi. Opisuje tehnološke povezanosti med proizvodnjami posameznih vrst proizvodov. Stolpci v levem delu prikazujejo za vsak proizvod vrednosti proizvodov in storitev, ki so bili porabljeni kot inputi za njegovo proizvodnjo, v spodnjem delu pa sestavo dodane vrednosti, ustvarjene pri proizvodnji tega proizvoda. Stolpci v desnem delu tabele pa enako kot v tabeli porabe prikazujejo sestavo posameznih vrst končnih potrošenj po proizvodih.

V simetrični input-output tabeli velja **enakost med vrsticami in stolpci**: vrednost ponudbe posameznega proizvoda, ki je prikazana v stolpcu, je enaka vrednosti porabe tega proizvoda, prikazani v vrstici.

Simetrično input-output tabelo izdelamo s pretvorbo tabel ponudbe in porabe, vrednotenih v osnovnih cenah. Treba je opraviti prerazporeditev outputov in inputov iz panog, ki jih dejansko proizvajajo oz. porabljajo, v "homogene panoge", tj. v panoge, ki proizvajajo le eno vrsto proizvoda. To se izvede s pomočjo predpostavk in matematičnih metod, če pa so na voljo dodatne statistične informacije, se uporabi tudi te. Predpostavke temeljijo na dveh vrstah tehnoloških predpostavk:

- tehnologija proizvoda, ki predpostavlja, da imajo vsi proizvodi določene skupine enako strukturo inputov, ne glede na to, katera panoga jih proizvaja, ali

Individual columns in the left part of the table show the structure of intermediate consumption of particular industry by the types of products and the structure of value added of this industry. Columns in the right part of the table show the structure of categories of final use by types of goods and services. In the table the rows for adjustments for individual purchases of residents abroad and non-residents at home are added. Purchases of residents abroad are in the value of business purchases included in the intermediate consumption and in the value of private purchases they enlarge final consumption expenditure of households. Purchases of non-residents at home lower final consumption expenditures of households and enlarge exports. Final aggregates in the use table show total value of production, intermediate consumption, value added, elements of value added and categories of final use for the whole economy.

**Industries**, shown in columns, are in the prepared supply and use tables defined as groups of enterprises with the same principal activity. In this way industries are to some extent more heterogeneous than if we used the "kind of activity units" (KAU) approach recommended by ESA. However, this approach is more difficult to perform. We have decided for this approach because of the deficiencies of available data sources.

There are **two identities** between supply and use tables:

- identity by industry: output by industry = inputs by industry; thus the sums of individual columns are the same in both tables;
- identity by product: total supply by product = total use by product; thus the sums of individual rows are the same in both tables.

**Use of imports table** shows the use of imported products in individual activities and types of final uses. It has industries classified in the columns and groups of products classified in the rows. Data are shown in CIF values, which correspond to the valuation at basic prices. In order to ensure proper total valuation of imports in FOB values, the CIF/FOB adjustment is added.

**Use table for the domestic output** is achieved as the difference between the use table at basic prices and the use of imports table. It shows uses of individual products originating from domestic production, according to individual industries and types of final uses.

**Symmetric input-output table** is a matrix which employs the same classification in columns and rows, i.e. product or industry. The essential difference between the supply and use tables and the symmetric input-output table is therefore that the former tables relate products to industries and the latter table relates products to products or industries to industries. We can therefore construct two types of symmetric input-output tables: product by product or industry by industry. In ESA 95 and in input-output analysis **product by product table** has the primary role. It shows more homogenous flows and also we have elaborated it. It describes technological relations between productions of individual products. Columns in the left part of the table show for each product values of individual products and services used as inputs into their production and in the lower part the composition of value added generated by the production of this product. Columns in the right part of the table show in the same way as in the use table the composition of individual types of final uses by products.

In the symmetric input-output table there exists **identity between rows and columns**: the value of supply of individual product shown in the column is equal to the value of use of this product shown in the row.

A symmetric input-output table is elaborated with the conversion of supply and use tables valued at basic prices. It is necessary to rearrange outputs and inputs from the industries where they are actually produced or used to the "homogenous branches", i.e. branches which produce only one type of product. This is performed by the use of assumptions and mathematical methods and if additional statistical information is available, it is used. Assumptions base on two types of technological assumptions:

- product technology, assuming that all products in a product group have the same input structure, whichever industry produces them, or

- tehnologija panoge, ki predpostavlja, da so vsi proizvodi določene panoge proizvedeni z enako strukturo inputov.

Izbira predpostavke je odvisna od značilnosti domačih panog, to je od homogenosti proizvodnih tehnologij, ki se jih uporablja v okviru iste skupine proizvodov oz. v okviru iste panoge. Mi smo se odločili za uporabo predpostavke tehnologije proizvoda, za katero smo menili, da je realnejša in se tudi vsebinsko sklada z obliko tabele proizvod-proizvod.

V nadaljevanju je simetrična input-output tabela razdeljena na uvozne in domače tokove. **Simetrična tabela porabe uvoza** prikazuje porabe uvoženih proizvodov, **simetrična input-output tabela za domačo proizvodnjo** pa porabe doma proizvedenih proizvodov.

V skladu z določili ESR 1995 je za panoge uporabljena **klasifikacija** NACE Rev.1 (oz. slovenska različica SKD - Standardna klasifikacija dejavnosti), za proizvode pa CPA (oz. slovenska različica CPA - Klasifikacija proizvodov po dejavnosti). Ti dve klasifikaciji sta med seboj popolnoma usklajeni: na vseh ravneh agregacije prikazuje CPA glavne proizvode panog po NACE Rev. 1. Tabele objavljamo na ravni **30 panog oz. skupin proizvodov**. Izdelane so bile na ravni 60 skupin dejavnosti oz. proizvodov, v skladu z Eurostatovimi zahtevami za države članice EU. Pri sestavljanju tabel je bila raven podrobnejša, kolikor so jo za posamezne dele dopuščali podatkovni viri.

**Koncepti in definicije** so enaki kot v ostalem sistemu nacionalnih računov.

## DEFINICIJE

**Proizvodnja** je vrednost proizvodov in storitev, proizvedenih v okviru proizvodne enote, od začetka do konca leta. Vključuje proizvodnjo, namenjeno za prodajo na trgu, proizvodnjo za lastno končno potrošnjo ter drugo netržno proizvodnjo (države, neprofitnih institucij gospodinjstev - NPISG). Vrednotena je v osnovnih cenah.

**Osnovna cena** je vrednost, ki jo prejme proizvajalec od kupca za enoto proizvedenega proizvoda ali storitve, od katere se odštejejo vsi davki, prištejejo pa se ji vse subvencije na proizvode, ki se nanašajo na to enoto.

**Kupčeva cena** je vrednost, ki jo dejansko plača kupec za enoto nabavljenega proizvoda ali storitve. Od osnovne cene se razlikuje (je večja) za vrednost trgovskih in transportnih marž ter vrednost neto davkov (davki minus subvencije) na proizvode.

**Davki na proizvodnjo in uvoz** vsebujejo dve glavni kategoriji: davke na proizvode in druge davke na proizvodnjo. **Davki na proizvode** so davki, ki se plačujejo na enoto določenega proizvoda ali storitve in se obračunajo, ko je blago proizvedeno, prodano ali uvoženo (davek na dodano vrednost, trošarine, uvozne dajatve in drugi posebni davki na proizvode ter transakcije). **Drugi davki na proizvodnjo** so davki na proizvodnjo, ki so neodvisni od količine ali vrednosti proizvedenih ali prodanih proizvodov in storitev.

Enako kot davki se tudi **subvencije** delijo na dve glavni kategoriji: subvencije na proizvode in druge subvencije na proizvodnjo. **Subvencije na proizvode** so subvencije, ki se plačujejo na enoto proizvoda ali storitve. Plačujejo se lahko ob proizvodnji, prodaji ali uvozu proizvoda ali storitve. **Druge subvencije na proizvodnjo** vključujejo ostale subvencije, ki jih podjetje lahko dobi od države zaradi vključevanja v proizvodnjo. Subvencije se obravnavajo kot negativni davki.

**Trgovske marže** so vrednost outputa trgovcev na debelo in drobno. So razlika med prodajno vrednostjo trgovskega blaga in njegovo nabavno oz. nadomestitveno vrednostjo. V tabeli porabe, kjer so tokovi prikazani v cenah kupcev, so trgovske marže vključene pri porabah posameznih vrst proizvodov. V tabelah, kjer so tokovi vrednoteni na osnovnih cenah, pa so trgovske marže iz posameznih tokov izločene in prikazane v vrstici trgovskih storitev.

**Transportne marže** so vrednost prevoznih stroškov, ki jih kupec plača posebej in so vključeni v kupčevo ceno proizvodov, ne pa tudi v osnovno ceno proizvajalca

- industry technology, assuming that all products produced within an industry are produced with the same input structure.

The choice of assumption depends on the characteristics of domestic industries, this means on the homogeneity of production technologies used within individual product group or individual industry. We have decided for the use of the product technology assumption, which we considered more realistic and which is also compatible with the product by product type of table.

It follows the breakdown of the symmetric input-output table to imported and domestic flows. **Symmetric use of imports table** shows the uses of imported products, whereas **symmetric input-output table for domestic production** shows the uses of domestically produced products.

In line with ESA 1995 definitions, the **classification** used for industries is NACE Rev. 1 (Slovene version SKD - Standard Classification of Activities) and for products CPA (Slovene version CPA - Classification of Products by Activity). These two classifications are completely harmonised: at all levels of aggregation the CPA shows main products of activities according to NACE Rev. 1. We publish the tables at the level of **30 industries and groups of products**. Originally, they were compiled for 60 groups of activities and products, as it is the requirement of Eurostat for EU Member States. By the compilation of tables the level of detail was greater as much as it was possible for individual parts due to available data sources.

**Concepts and definitions** are the same as in the rest of the system of national accounts.

## DEFINITIONS

**Output** is value of goods and services produced within the production unit from the beginning to the end of the year. It includes production for the sale on the market, production for own final use and other non-market production (of government, non-profit institutions serving households – NPISH). It is valued at basic prices.

**Basic price** is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax on product payable, and plus any subsidy on product receivable referring to that unit.

**Purchasers' price** is the amount actually paid by the purchaser for a unit of a good or service. It differs (is higher) from the basic price for the value of trade and transport margins and net taxes (taxes less subsidies) on products.

**Taxes on production and imports** consist of two major categories: taxes on products and other taxes on production. **Taxes on products** are taxes which are paid per unit of particular good or service and are paid when goods are produced, sold or imported (sales taxes, excise duties, import duties and other special taxes on products and transactions). **Other taxes on production** cover taxes on production, payable irrespective of the quantity or value of production.

In the same way as taxes also **subsidies** are divided into two major categories: subsidies on products and other subsidies on production. **Subsidies on products** are subsidies which are paid per unit of good or service. They can be paid when the good or service is produced, sold or imported. **Other subsidies on production** consist of other subsidies enterprises can get from the government as a consequence of engaging in production. Subsidies are considered as negative taxes.

**Trade margins** are the value of output of wholesale and retail traders. They are the difference between the price realised on a good purchased for resale and its purchasing or replacement value. In the use table, where the flows are shown at purchasers' prices, trade margins are included by the uses of individual types of products. In the tables where the flows are shown at basic prices, trade margins are separated from these flows and shown in the rows for trade services.

**Transport margins** are the value of transport costs paid separately by the purchaser and included in purchasers' price, but not also in basic prices of

ali v trgovske marže trgovca na debelo ali drobno. Enako kot trgovske marže so v tabeli porabe, kjer so tokovi prikazani v cenah kupcev, transportne marže vključene pri porabah posameznih vrst proizvodov. V tabelah, kjer so tokovi vrednoteni v osnovnih cenah, pa so transportne marže izločene iz posameznih tokov in prikazane v vrstici transportnih storitev.

**Vmesna potrošnja** je vrednost proizvodov in storitev porabljenih kot inputov v procesu proizvodnje znotraj proizvodne enote. Ne vsebuje potrošnje stalnega kapitala. Vrednotena je v cenah kupcev.

**Dodana vrednost** v osnovnih cenah je enaka proizvodnji v osnovnih cenah, zmanjšani za vmesno potrošnjo v cenah kupcev. Sestavljajo jo sredstva za zaposlene, drugi neto davki na proizvodnjo, potrošnja stalnega kapitala in neto poslovni presežek, ki je rezidualna kategorija.

**Končna potrošnja** je vsota izdatkov za končno potrošnjo posameznih institucionalnih sektorjev, bruto investicij ter izvoza.

**Izdatke za končno potrošnjo posameznih institucionalnih sektorjev** sestavljajo izdatki za končno potrošnjo gospodinjstev, neprofitnih institucij gospodinjstev (NPISG) in države.

**Bruto investicije** sestavljajo bruto investicije v osnovna sredstva, neto nabave vrednostnih predmetov in umetnin ter spremembe zalog (proizvodov, nedokončane proizvodnje, surovin in materialov, trgovskega blaga).

**Ponudba** je seštevek domače proizvodnje in uvoza.

**Poraba** je seštevek vmesne in končne potrošnje.

## IZDELAVA TABEL

Metodološke značilnosti tabel so enake kot pri predhodnih tabelah za leto 2000. Prvi del naloge izdelave tabel je sestavljanje tabel ponudbe in porabe. Izhajajo neposredno iz razpoložljivih statističnih podatkov, zato sta njihova struktura in izbira statistične enote odvisni od razpoložljivosti posameznih statističnih virov. Enako kot za leto 2000 smo za statistično enoto v tabelah ponudbe in porabe izbrali podjetje, ker je bilo tako mogoče uskladiti podatke iz različnih statističnih virov.

Izhodišče za izdelavo tabele ponudbe so podatki o proizvodnji iz posameznih panožnih statističnih raziskovanj; ta zajemajo v glavnem enote pravnih oseb, le v manjši meri tudi enote gospodinjstev. Podatki so bili prilagojeni definicijam ESR, dopolnjeni za zajetje ter usklajeni s podatki o proizvodnji iz administrativnih virov. Podatke o tistih storitvenih dejavnostih, ki niso zajete v statistična raziskovanja, smo pridobili iz administrativnih virov. Te podatke smo dopolnili s podatki o strukturi proizvodnje podjetij, ki smo jih izračunali na podlagi posebnega raziskovanja za leto 2000. Tako nam je uspelo izločiti še ostale stranske dejavnosti, predvsem storitvene, ki jih opravljajo podjetja. Podatki o proizvodnji enot gospodinjstev, ki jih ne zajemajo statistična raziskovanja, temeljijo na podatkih iz administrativnih virov. Pri tem smo upoštevali korekcije zajetja enot in transakcij, opravljene v okviru nacionalnih računov. V tabeli smo upoštevali podatke iz ekonomskih računov za kmetijstvo ter iz obračuna proizvodnje za finančni sektor, neprofitne institucije in ožji sektor države, izdelane v okviru nacionalnih računov. Matrika proizvodnje je bila izdelana na ravni 3-mestne klasifikacije SKD/CPA in tako obsega 220 dejavnosti in proizvodov.

Podatke o uvozu in izvozu proizvodov smo pridobili iz zunanjetrgovinske statistike, podatke o uvozu in izvozu storitev in o cif/fob prilagoditvi pa iz plačilne bilance Banke Slovenije. Izračun trgovskih marž po proizvodih temelji na podatkih iz zaključnih računov o prodaji in nabavi trgovskega blaga ter na podlagi podatkov iz trgovinske statistike o prometu po blagovnih skupinah in vrstah prodaje. Izračun transportnih marž temelji na podatkih iz raziskovanj transporta, dopoljenih z drugimi viri, o opravljenih transportnih storitvah in o opravljenih prevozih po blagovnih skupinah. Podatki o davkih zajemajo uvozne datjave, davek na dodano vrednost, trošarine in druge davke na proizvode. Podatki o uvoznih datjavah po proizvodih izhajajo iz podatkov na osnovi carinskih deklaracij iz zunanjetrgovinske

manufacturer or in trade margins of wholesale or retail trader. In the same way as by trade margins, in the use table, where the flows are shown at purchasers' prices, transport margins are included by the uses of individual types of products. In the tables where the flows are shown at basic prices, transport margins are separated from individual flows and shown in the rows for transport services.

**Intermediate consumption** is the value of goods and services used as inputs into the process of production within the production unit. It does not include the use of fixed capital. It is valued at purchasers' prices.

**Value added** at basic prices is equal to output at basic prices less intermediate consumption at purchasers' prices. It is composed of compensation of employees, other net taxes on production, consumption of fixed capital and net operating surplus, which is the residual category.

**Final use** is the sum of final consumption expenditures of individual institutional sectors, gross capital formation and exports.

**Final consumption expenditures of individual institutional sectors** are composed of expenditures for final consumption of households, non-profit institutions serving households (NPISH) and government.

**Gross capital formation** comprises gross fixed capital formation, net acquisitions of valuables and changes in inventories (of products, unfinished production, materials, trading goods)

**Supply** is the sum of domestic output and imports.

**Use** is the sum of intermediate consumption and final use.

## COMPILATION OF THE TABLES

Methodological characteristics of the tables are the same as for previous tables for the year 2000. The first part of the task of the preparation of the tables is the compilation of supply and use tables. They are compiled directly from available statistical sources, therefore their structure and the choice of the statistical unit depends on the availability of individual statistical sources. The same as for the year 2000 we have chosen enterprise as the statistical unit in the elaborated supply and use tables, because in this way it was possible to adjust data from different statistical sources.

The starting point for the preparation of the supply table were data on output from individual branch statistical surveys, which cover mainly legal units and to a smaller extent households units. Data were adjusted to the definitions of ESA, completed for coverage and reconciled with the data on output from administrative sources. Data for service activities which are not covered with statistical surveys were acquired from administrative sources. These data were supplemented with the data about the structure of output of enterprises, which were calculated on the basis of special survey carried out for the purpose of the compilation of the 2000 tables. In this way we were able to separate also other secondary activities, in particular services which are carried out by enterprises. Data on output of household units which are not covered with statistical surveys are based on administrative sources. By this we considered adjustments for coverage of units and transactions elaborated within the national accounts. In the table we considered data from economic accounts for agriculture and calculation of output for the financial sector, non-profit institutions and central government sector compiled in national accounts. The make matrix was compiled at the level of 3-digit NACE/CPA classification, which comprises 220 activities and products.

Data on imports and exports of goods were acquired from external trade statistic and data on imports and exports of services and on cif/fob adjustment from balance of payments of the Bank of Slovenia. The calculation of trade margins on products is based on the data from financial statements of enterprises on sales and acquisitions of goods for trade and on the basis of the data from trade statistics on turnover according to commodity groups and types of trade. The calculation of transport margins is based on the data from transport statistical surveys, supplemented with other sources about performed transport services and transportation according to product groups. Data on taxes comprise import duties, value added tax, excise duties and other taxes on products. Data on import duties

statistike. Izračun davka na dodano vrednost po proizvodih je rezultat izdelave tabele davkov; pri izračunu davka smo upoštevali predpisane davčne stopnje in obdavčljive nabave za posamezne vrste potrošenj (vmesne in končnih) in ga uskladili s podatki iz davčnih evidenc. Podatki o ostalih davkih na proizvode so bili pridobljeni iz davčnih evidenc in se nanašajo na specifične vrste proizvodov. Podatki o subvencijah na proizvode so ocena nacionalnih računov na podlagi statistike javnih financ ter podatkov iz zaključnih računov podjetij.

Glavni vir za izračun podrobne vmesne potrošnje po proizvodih v tabeli porabe so bili podatki iz posebne statistične raziskave, izpeljane za leto 2000, osveženi na leto 2001. Osveženi izračun je bil izdelan na podlagi preračuna v stalne cene in dopolnjen s podatki iz razpoložljivih rednih administrativnih in drugih virov za leto 2001, ki so pretežno bolj agregatni. Podrobnega statističnega raziskovanja o strukturi stroškov v podjetjih namreč zaradi obsežnosti ne izpeljemo vsako leto, temveč na 3-5 let. Podlaga za zagotovitev polnega zajetja vmesne potrošnje ter izračun elementov dodane vrednosti so podatki iz administrativnih virov, prilagojeni konceptom nacionalnih računov. Podatki o končni potrošnji gospodinjstev izhajajo iz ankete o porabi v gospodinjstvih, iz trgovinske statistike ter dodatnih izračunov, pripravljenih v okviru nacionalnih računov. Glavni vir podatkov o investicijah je statistično raziskovanje o investicijah, dopolnjeno z dodatnimi izračuni v nacionalnih računih za samogradnjo ter z analizo pretoka blaga investicijske opreme. Osnova za podatke o izdatkih za končno potrošnjo države in neprofitnih institucij so izračuni v okviru priprave BDP po proizvodni in izdatkovni metodi.

Na podlagi podatkov iz zunanjetrgovinske statistike in plačilne bilance smo izdelali tabelo porabe uvoza. Ta tabela je bila v pomoč tudi pri bilanciranju tabel, katerega rezultat so usklajene tabele ponudbe in porabe v kupčevih in osnovnih cenah, tabele marž in davkov ter usklajena tabela porabe uvoza.

Drugi del naloge zajema pripravo simetričnih input-output tabel. Izdelali smo jih z matematično pretvorbo tabel ponudbe in porabe na osnovi predpostavke tehnologije proizvoda. V nekaj primerih smo to predpostavko dopolnili s predpostavko tehnologije panoge.

according to products are acquired from data of customs declarations from external trade statistics. Calculation of value added tax according to product groups is the result of the elaboration of taxes' table, where the tax is calculated taking into account the prescribed tax rates and taxable purchases (intermediate and final) and reconciled with the data from tax records. Data on other taxes on products are acquired from tax records and they relate to specific products. Data on subsidies on products are the estimation of national accounts on the basis of government financial statistics and data from financial accounts of enterprises.

The main data source for the calculation of detailed intermediate consumption by products in the use table was a special statistical survey carried out for the year 2000, updated to the year 2001. The updated calculation was carried out on the basis of the calculation in constant prices and supplemented by available regular administrative and other sources for the year 2001, which are predominantly more aggregated. Detailed statistical survey on the structure of costs of enterprises is because of extensiveness not carried out every year but every 3-5 years. The basis for the assurance of full coverage of intermediate consumption and for the calculation of elements of value added are administrative sources, with the adjustments on the concepts of national accounts. Data on final consumption of households derive from the household budget survey, trade statistics and additional calculations done within national accounts. The main source for capital formation is the statistical survey on fixed capital formation, supplemented with additional calculation in national accounts for own-account construction and commodity flow analysis for the equipment investment goods. Data on final consumption expenditures by government and non-profit institutions are calculated within the compilation of GDP by expenditure approach.

On the basis of the data from external trade statistics and the balance of payments the use of imports table was compiled. This table was taking part also by the process of balancing of the tables which results are reconciled supply and use tables at purchasers' and basic prices, tables of margins and taxes and the use of imports table.

The second part of the task comprises the preparation of symmetric input-output tables. We elaborated them with the mathematical transformation of the supply and use tables on the basis of the product technology assumption. In some cases we have supplemented this assumption with the industry technology assumption.
